Acknowledgements

We acknowledge our First Nation partners and Indigenous peoples and communities throughout Australia and Canada and recognise their continuing connection to land, waters and community. We are thankful to be working and living on the Country, lands and waterways comprising:

- *The Gadigal people of the Eora Nation at Sydney;*
- *The Wiradjuri people at Cowal;*
- *The Mitakoodi people at Ernest Henry;*
- *The Marlinyu Ghoorlie people and other knowledge holders at Mungari;*
- *The Port Curtis Coral Coast Trust comprising the Bailai, Gurang, Gooreng Gooreng and Taribelang Bunda peoples at Mt Rawdon;*
- *The Wiradjuri people of the Upper Bogan River at Northparkes[1]; and*
- *The Wabauskang and Lac Seul First Nations of Treaty 3 and other knowledge holders at Red Lake in Ontario.*

We pay our respects to them and their cultures, and to Elders past and present. We acknowledge the Elders for their resilience to pave the way for the generations that follow them and we acknowledge those who continue to educate and empower to maintain and protect all aspects of Indigenous and First Nation heritage and culture.

Dinawan's Connection performers at the Condo SkyFest 2024

1 As of 30 June 2024, Evolution operated five wholly-owned mines and an 80% interest in Northparkes. We acquired Northparkes in December 2023. The data presented covers all operations, including Northparkes from date of acquisition unless otherwise specified.

Welcome

Evolution Mining Limited (Evolution) is proud to present the seventh Annual Sustainability Report (Report) that discloses our Environment, Social and Governance (ESG) performance, and the progress made within the context of the dynamic and changing sustainability landscape.

Our Sustainability performance reflects the contribution of all our people. We continue to work together to deliver long-term stakeholder value through reliable, low-cost production in a safe, environmentally and socially responsible way.

The content of this Report reflects the activities undertaken in FY24 and structured to reflect our Sustainability Strategy and materiality.

FY24 ESG Performance Data

Our FY24 ESG Performance Data discloses our performance against our Sustainability targets and metrics for the financial year and includes index tables in alignment with the Global Reporting Initiative (GRI) and other ESG frameworks.

Feedback

This Report aims to provide insightful and informative perspectives, offering a balanced view of Evolution's Sustainability efforts. We welcome your feedback and questions about our Sustainability performance and Sustainability-related disclosures. Please direct your enquiries to Vice President Sustainability, Fiona Murfitt at esgreporting@evolutionmining.com

FY24 highlights

96%

Sustainability targets met with improvements required in gender diversity and engaging our leaders and people.

~12%

Reduction in emissions against adjusted FY20 baseline[2], progressing our commitment to Net Zero by 2050 and on track to meet 30% reduction by 2030.

45%

Improvement in FY24 freshwater usage intensity compared to adjusted FY20 baseline, exceeding target.

High Approval

Social Licence to Operate score recorded in our biennial Stakeholder Perception Survey.

$2.7B

Contributed to the Australian and Canadian economies[3] and $419 million to local and regional businesses[4] and organisations.

~13%

Improvement in TRIF during the year to 7.7[5].

2 Net Zero commitment of 30% emissions reduction by 2030 and Net Zero emissions by 2050, compared to FY20 baseline. Emissions targets are related to Scope 1 and Scope 2 only. Assessed using market-based method. Update from preliminary value of ~14% reduction reported in FY24 Directors' Report following inclusion of Corporate and Exploration data and completion of external verification process.
3 Economic contributions include supplier payments, wages, dividend payments, interest, taxes, royalties, community investment, payments to providers of capital and payments to financial institutions (interest).
4 Local and regional organisations are defined by postcode in relation to geographical proximity to Evolution mine sites.
5 TRIF: the frequency of total recordable injuries per million hours worked. Results are based on 12-month moving average (12mma). The reduction is against the FY23 adjusted baseline including Northparkes.

Chair of the Risk and Sustainability Committee's letter

> I am pleased to report that we continue to progress our Sustainability agenda and track toward our Sustainability performance goals.

This Sustainability Report aims to provide a detailed understanding of our journey, in particular our progress in FY24, and commitment to the sustainable future for our business, people, First Nation partners and local communities. I am pleased to report continued progress in our sustainability agenda.

Since our inception, Sustainability has been integral to our business. As we have matured, it has become integrated into all aspects of our business so that it is now how we operate. Guided by our Sustainability purpose, we are motivated to create long-term value, delivering positive impacts for our stakeholders. We take pride in fostering trusted partnerships that enable safe, reliable and sustainable operations.

We continue to see a shift in social, political, and environmental challenges. This has allowed us to become more resilient and deepen our understanding and management of sustainability risks and opportunities. During this growth, and the acquisition of Northparkes, we hold fast to our values of safety, excellence, accountability and respect as core to delivering our long-term strategic goals.

Safe and engaged workforce

Our holistic approach to health, safety and wellbeing is focused on proactive strategies to drive improvement. We have mitigated risk across our operations by concentrating on Material risk and leading indicator management. In this way, we have reduced the likelihood of serious incidents and injuries. This has enabled a ~13% reduction in Total Recordable Injury Frequency (TRIF) supported by a strong culture of reporting and continuous learning and improvement.

Net Zero transition

Addressing global climate-related risks and opportunities linked to our Net Zero commitment remains crucial to ensuring our business remains resilient and relevant for the future. We have delivered year-on-year improvement in the reduction of emissions, in line with becoming a Net Zero emissions business by 2050. We delivered ~12% greenhouse gas (GHG) emission reduction compared to our FY20 baseline and are on track to meet 30% reduction by 2030. We matured our power supply and technology partnerships during the year as we prepare for more challenging decarbonisation transitions post-2030. Asset-specific climate risk assessments and decarbonisation studies are now embedded into our decision-making across all stages of the business life cycle, from due diligence to closure planning.

Responsible environmental stewardship

Respecting the environment in which we operate is fundamental to our values and to maintaining our social and regulatory licence to operate. Consistent with our strategy and focused efforts to reduce the use of freshwater, our freshwater use intensity continued to be reduced by 45% compared against our adjusted FY20 baseline. We have also seen improvements in our tailings management strategy, resulting in improvements to risk management and assurance methods that will provide for secure long-term management and ultimate restoration of these facilities.

Trusted partner in communities

We are committed to achieving positive socioeconomic outcomes through effective collaboration with communities neighbouring our operations. Our FY24 biennial Stakeholder Perception Survey recorded a 'High Approval' Social Licence to Operate score. We continue to adapt our community engagement approach to address local priorities and stakeholder interests.

Working closely with our First Nations partners, our inaugural First Nations Summit also provided an opportunity to listen, learn and connect in the spirit of reconciliation, collaboration, knowledge sharing and capacity building.

Making Evolution a career highlight

We want working for Evolution to be a career highlight, and we remain committed to fostering an inclusive and diverse workplace where everyone feels respected, connected, and can achieve their career development goals.

Talent attraction, retention and professional growth are integral to our success in a changing environment. During the year we increased our graduate intake by 50% and overall staff retention to 87%. Whilst female representation increased slightly to 19%, we are committed to progressing this further through localised strategies focused on closing the gap to meet our FY25 target of 22% female representation.

Governance and assurance

We welcome the International Sustainability Standards Board (ISSB) issuing its inaugural Task Force on Climate-related Financial Disclosures (TCFD)-aligned International Financial Reporting Standards (IFRS) to establish a global baseline of investor-focused Sustainability-related disclosures. We have undertaken comprehensive preparatory work for this, placing us in a strong position to deliver against the revised compliance obligations.

Our reporting continued to be recognised by key ratings agencies including in the Dow Jones Sustainability Index Australia, and maintaining our 'AA' rating from MSCI. We published a fourth Modern Slavery Statement, reinforcing our commitment to recognising and enhancing human rights, and our work towards meeting compliance obligations from existing Australian and new Canadian Modern Slavery legislation. We are also pleased to support the United Nations Global Compact "Communication on Progress" with this Report.

We are confident this Report is accurate, balanced, and provides the level of accountability and transparency that we continually strive for. On behalf of the Board, I would like to thank everyone who has contributed to the progress we have made in creating a sustainable future for our business. Our business looks forward to meeting future challenges, knowing we have created an excellent platform for a long-term sustainable future.

Yours faithfully

Peter Smith
Lead Independent Director and Chair of the Risk and Sustainability Committee

FY24 Sustainability performance targets

Linked to our Sustainability Strategy, specific performance targets are set annually to measure progress. In FY24, targets were aligned with both the Sustainability Principles and 3-Year Waypoint Goals (FY24-FY26). The Waypoint Goals provide a balanced scorecard supported by the five business pillars: Sustainability, People, Operations, Growth and Financial outcomes.

Performance (progress against key targets)

In FY24, Evolution's Sustainability performance delivered on or better than target in 27 of 28 targets across Environment, Health and Safety, People and Community. We achieved all safety, health and wellbeing targets but remain vigilant and committed to continually improve our safety performance, as one injury is one too many. We improved our freshwater usage intensity against baseline and are on track to meet our Net Zero commitment of 30% reduction in GHG emissions by 2030 and Net Zero by 2050 (Scope 1 and 2 emissions). We recorded a 'High Approval' Social Licence to Operate score in our biennial Stakeholder Perception Survey. We also acknowledge the need to improve against other performance targets.

Gender diversity has improved marginally year-on-year as we work toward our FY25 target of 22% female participation. We achieved 19% in FY24 (FY23: 18%), which is an encouraging indication that our strategies are taking effect, particularly at graduate and leadership levels in the organisation. The Northparkes acquisition has impacted our gender diversity outcomes, given the operation's lower female workforce representation than Evolution overall. We delivered on our commitment to increase Board gender diversity (no less than 30% female participation in Board) with the appointment of Ms Fiona Hick as Non-Executive Director (1 July 2024). We also increased female representation in our Leadership Team with the appointment of Nancy Guay as Chief Technical Officer. There is still much to do, and we are implementing targeted strategies to improve recruitment, retention and female representation.

We were below our target of 100% of people having Living our Values conversations, achieving 61%. While all senior leaders have held the conversations throughout the year, overall, the lower completion rate reflects the initiative not being included as a mandatory business scorecard goal and still growing maturity. We have adopted a stretch target approach and believe that listening to our people is a pathway to improvement. We are encouraged by the quality of the conversations, the insights gained and remain committed to the program and assessing and tracking its benefits.

Overall, each of our operations continued to deliver their Health, Safety, Environmental Permitting and Approvals and Community Improvement Plans to support the first financial year of the 3-Year Waypoint Goals (FY24-FY26).

FY25 Sustainability performance targets

Board-approved Sustainability performance targets have been set to address our Material Sustainability topics through our 3-Year Waypoint Goals (FY24-FY26) and Net Zero commitment. In developing these targets, we engaged people across the business, considered our Material risks and emerging global and sectoral challenges, and focused on our commitments to the United Nations Global Compact (UNGC) and Paris Agreement. These targets are linked to employee and Management short term incentive payments (STIP). In FY25, we will monitor our performance against Sustainability, People, Operations, Growth and Financial outcomes targets.

Ernest Henry Operations overlooked by the Sustainability team

FY24 Sustainability performance targets

Click the Sub-category to read more.

Sub-category	Target	Timeframe	Performance
Governance and Assurance			
Voluntary ESG disclosures and commitments to initiatives	**Externally validated** third-party performance	Ongoing/ FY24	• Participation in third-party performance benchmarking and ESG rating agencies.
	TCFD alignment	FY24	• Extending energy audit and climate scenario analysis (Cowal FY22, Mungari FY23), with the FY24 Northparkes energy audit, decarbonisation roadmap for Mungari 4.2 Project, and climate scenario analysis and roadmap for Ernest Henry Extension Feasibility Study against 1.5°C and 2°C scenarios. • Third-party validation and benchmarking of our FY22, FY23, FY24 TCFD reporting.
	TNFD alignment	FY24	• Reviewed TNFD Final Recommendations against Evolution's corporate governance practices.
	IFRS S1 and S2 alignment	FY24	• Completed third-party assessment of IFRS, ~72% weighted compliance.
	ASRS alignment	Ongoing/ FY25	• Commenced third-party assessment of Evolution's ASRS assurance readiness.
Assurance and audit	**100% of operations assured** against agreed Evolution Standards and Material risks	FY24	• 100% of assurance activity completed against agreed Standards and Material risks.
Modern Slavery and Human Rights Ⓜ	**Modern Slavery Statement compliance**	Ongoing/ FY24	• Fourth Modern Slavery Statement published in 2024, and first report published under Canada's new *Fighting Against Forced Labour and Child Labour in Supply Chains Act (S.C. 2023, c9)*. Preparing the next following the assessment of 62%[6] of medium and high-risk suppliers.
	Zero cases of bribery or corruption	Ongoing/ FY24	• Zero reported cases of bribery or corruption.
Business ethics	**100% of whistleblower complaints investigated and addressed**	Ongoing/ FY24	• 100% of whistleblower complaints (3) investigated and addressed.
Board diversity	**No less than 30% female representation** on the Board	Ongoing/ FY24	• Delivered on our FY24 commitment to increase Board gender diversity with the formal announcement and commencement of Ms Fiona Hick as Non-Executive Director (1 July 2024).
Economic contributions			
	Local and regional procurement	Ongoing/ FY24	• $2.7 billion contribution to the Australian and Canadian economies[3]. • **$419 million to local and regional** businesses[4] and organisations including $353 million in direct spend with local organisations (54% increase in local spend from FY23).

6 Includes all operations, including Northparkes. See ESG Performance Data for detailed inputs into this figure.

Sub-category	Target	Timeframe	Performance
Safe and engaged workforce			
Work health, safety and wellbeing Ⓜ	**Zero fatalities**	Ongoing/ FY24	• Zero fatalities.
	TRIF per million work hours at or below 7.56[7]	FY24	• **Year-on-year improvement** in TRIF with a **~15% TRIF improvement from FY23** excluding Northparkes. This comprises: • **~3% better than target with 7.37 TRIF** (versus target[7] 7.56 excluding Northparkes). • Cowal was the strongest performing operation with a 4.3 TRIF. • **~13% improvement against baseline with 7.69 TRIF** (versus baseline of 8.83 including Northparkes).
	100% of actions in targeted Health and Safety Improvement Plans completed	Ongoing/ FY24	• 100% of actions completed.
Hazard identification and mitigation	**Bowties/risk assessments completed** for Safety Material risks	FY24	• 100% completed with independent external validation of the data (Line of Defence (LOD) 3) with no major gaps.
	100% of actions closed out for Material and Critical risks	FY24	• 100% of actions closed out as per target with independent external validation of the data (LOD3). These actions are reviewed weekly and reported monthly, demonstrating a high level of confidence in reporting. • Improved critical control verification.
Making Evolution a career highlight			
Diversity and Inclusion Ⓜ	**22% female workforce representation by end of FY25**	Ongoing/ FY25	• 19% female workforce representation at the end of FY24, a slight increase from FY23 (18%), comprising 25% female graduate hires (FY23: 28%) and 22% females in senior leadership roles in FY24 (FY23: 14%). Targeted focus on recruitment and retention of females is expected to increase our female workforce. • Inclusion and Diversity Plans developed to increase talent attraction, development and retention of females across all operations and Group.
	85% or more of our people choosing to stay with Evolution	FY24	• 87% of employees are choosing to stay in a tight, competitive labour market (FY23: 83%).
	External graduate recognition	FY24	• Ranked second for the mining industry and 17th in the top 25 employers of small graduate intakes, according to Australian Association of Graduate Employers.
Talent attraction, retention and employee engagement Ⓜ	**65% or more of our people participate in the Your Voice engagement survey**	FY24	• 67% of people participated.
	100% of people having meaningful values and culture conversations	FY24	• 100% of senior leaders have undertaken the conversations throughout the year. Living our Values conversations continue to be a key part of how we listen to our workforce, and we will continue to encourage and track the benefits of these conversations. • 61% of employees had a meaningful values and culture conversation with a Senior People Leader other than a direct supervisor or manager. Below target as they were no longer mandatory nor reflected in annual performance scorecards.

7 Target represents a ~12% improvement from FY23 baseline excluding Northparkes.

Sub-category	Target	Timeframe	Performance
Trusted partner in communities			
Community and stakeholder engagement Ⓜ	**100% of actions in First Nation partner and Community Plans completed**	FY24	• 100% of actions in plans completed. • Six First Nation Agreements/plans reviewed with active participation by parties.
Cultural heritage and Indigenous stakeholder outcomes Ⓜ	**Zero Material cultural heritage incidents**	FY24	• Zero Material incidents, or Community Negative impact incidents.
Community investment	**Community investment and Shared Value Projects (SVPs)** for positive legacies	Ongoing/ FY24	• $4.4 million in direct community investment including SVP spend of $928,520. • Three SVPs committed to in FY24 with ~$560,000 investment focused on enhancing outcomes for First Nations partners, strengthening community resilience, and training. Additional SVPs are celebrated within this Report.
Responsible environmental stewardship			
Water management Ⓜ	**Achieve <0.34kL freshwater demand per dry tonne milled (dtm)**	FY24	• 45% improvement against adjusted baseline (0.40 kL/dtm) with 0.22kL/dtm freshwater use intensity.
Climate Risk and Resilience Ⓜ	Progress on **Net Zero commitment**[8]	Ongoing, FY30, FY50	• ~12% reduction[9,10] in emissions compared to FY20 baseline. • Ongoing implementation of Cowal Power Purchase Agreement (PPA) and the first surrender of Large-scale Generation Certificates (LGCs) as per the Renewable Sourcing Strategy. • Continued engagement with partners to reduce emissions and improve operational efficiency. • Embedded emissions modelling tools and considerations in all due diligence activities to assess the impact of acquisitions and major projects on our Net Zero performance against FY20 baseline. • Updated emissions baseline to include Northparkes, in accordance with GHG Protocol.
Environmental management	**Zero Extreme or Major (Material) environmental incidents** (including tailings)	Ongoing/ FY24	• Zero Extreme or Major (Material) environmental incidents occurred.
	Retain **ISO 14001 Certification and International Cyanide Management Code (ICMC) Certification**	Ongoing/ FY24	• Certifications retained at relevant operations.

Commitments and recognition

We participate with various ESG rating agencies to benchmark our performance, identify opportunities for improvement and calibrate our sustainability performance continually. Our measurable progress over time is presented below.

Evolution's ESG performance

Agency	Scale (worst to best)	FY24 Score	FY23 Score	FY22 Score	FY21 Score
S&P Global	0 to 100	54[11]	57	53	51
MSCI	CCC to AAA	AA	AA	AA	AA
ISS ESG[12]	10 to 1	Environment: 1 Social: 2	Environment: 1 Social: 2	Environment: 1 Social: 2	Environment: 1 Social: 2
Sustainalytics[12]	40+ to 0	27.4	29.8	29.2	40.4

8 Net Zero commitment of 30% emissions reduction by 2030 and Net Zero emissions by 2050, compared to FY20 baseline. Emissions targets are related to Scope 1 and Scope 2 only.
9 Update of the previously reported preliminary result of ~14% following third-party audit and final verification.
10 Utilises market-based methodology.
11 S&P Global ESG score which contains modelling, compared to our disclosure-based S&P Global CSA score of 51. Reported on a year lag as scores released August 2023.
12 Final score as of 30 June 2024.

S&P Global Ratings

MSCI ESG RATINGS AA
CCC B BB BBB A AA AAA

S&P Global

Due to a material shift in the methodology during the submission period, our score decreased slightly by 5%. This resulted in a disclosure-based (CSA) and modelled score (ESG). In September 2023, we achieved an S&P Global ESG Score of 54 (industry average of 27) based on FY22 disclosures. Evolution is recognised on the Dow Jones Sustainability Index Australia.

MSCI[13]

We maintained a high MSCI rating score of 'AA' for resilience to long-term ESG risks. We also scored 5.3 compared to the industry average of 4.4. We were placed among the top quartile for Biodiversity & Land Use and Health & Safety.

ISS ESG

SUSTAINALYTICS a Morningstar company RATED

ISS ESG

We maintained low-risk ESG scores, including a Level 1 for 'Environment' and 2 for 'Social'. We have retained these low-risk scores in a context of increasing social indicators and requirements.

Sustainalytics[14]

We upheld a 'Medium Risk' rating with '27.4' in FY24. This is our best risk rating to date, ranking in the top 24th percentile (22/90) globally.[15]

WE SUPPORT

UNGC

We have been a proud signatory of the UNGC since FY21. This brings us together with a global business community in a commitment to sustainable business practices, aligning our strategies and Sustainability Principles with the UNGC's Ten Principles, the United Nations Sustainable Development Goals (UNSDGs) and 2030 SDG targets.

ARA – Australian Reporting Awards

We have been recognised by Australia's leading reporting awards winning the 'Gold' award for the FY23 Annual Report, positioning our report as a model report. Our FY23 Sustainability Report was awarded 'Bronze' at the 2024 Australasian Reporting Awards.

Sustainability Advantage

We are an active partner of Sustainability Advantage, a program of the NSW Government's Department of Climate Change, Energy, the Environment and Water since December 2022.

Australian Association of Graduate Employers (AAGE)

It is an honour to be recognised as an AAGE Top Graduate Employer for two years in a row. We are ranked second in the mining industry and 17th in Australia for employers of small graduate intakes among a range of industries and achievers for 2024.

In December 2023, Cowal poured its 30,000th bar of gold

About Evolution

"We always strive to empower people and provide long-term socioeconomic outcomes to the communities in which we operate. This enables growth and fosters beneficial relationships, which we know are integral to our mutual success."

Lawrie Conway, Managing Director and Chief Executive Officer

Ernest Henry team members reviewing the site plan

Evolution was formed in November 2011 and has become a leading, globally relevant gold mining company. Evolution currently operates six mines in Australia and Canada, with the Northparkes mine (80% ownership) added in December 2023. In FY24, Evolution produced 716,700 ounces of gold at an All-in Sustaining Cost of $1,477 per ounce, continuing to position Evolution as one of the lowest-cost global producers.

First Nation partners and location of the Evolution operations

Our purpose

To deliver long-term stakeholder value through low-cost production in a safe, environmentally and socially responsible way

Our vision

Inspired people creating a premier global gold company

Our values

Our values guide our behaviours and the decisions we make in the workplace every day: safety, excellence, accountability and respect

Safety

Think before we act, every job, everyday

Excellence

We take pride in our work, deliver our best and always strive to improve

Accountability

It is my responsibility, I own it - good or bad

Respect

We trust each other, act honestly and consider each other's opinions

Our strategy

Since the formation of Evolution in November 2011, we have had a consistent strategy. To create a business that prospers through the cycle, we:

- **Integrate sustainability** into everything we do
- **Drive a high-performing culture** with values and reputation as non-negotiables
- **Take appropriate** geological, operational and financial risks
- **Build a portfolio of up to eight assets in Tier 1 jurisdictions** generating superior returns
- **Have financial discipline** centred around margin and appropriate capital returns

Graduates gaining experience underground at the Red Lake Operations

Water sampling conducted at Cowal as per licence and other obligations

About this Report

This Report is a summary of Evolution's Material Sustainability topics and performance for the financial year ended 30 June 2024 and marks the seventh year of annual Sustainability reporting. All references to 'Evolution', 'the Company', 'the Group', 'we', 'us' and 'our' refer to Evolution Mining Limited (ABN 74 084 669 036) and the entities it controlled, unless otherwise stated. Refer to our 2024 Annual Report for further information.

Reporting period

This Report covers the period from 1 July 2023 to 30 June 2024. References in this Report to 'year' are to the financial year ended 30 June 2024 unless otherwise stated.

Published date

This Report was published on 17 October 2024.

Boundary and scope

This Report covers operations at our 100% owned gold mines in Australia and Canada: Cowal in New South Wales, Ernest Henry and Mt Rawdon in Queensland, Mungari in Western Australia, Red Lake in Ontario and exploration activities in Australia and Canada. In FY24, we acquired an 80% share of the Northparkes[16] Operation in New South Wales. Due to the period of ownership, summaries on Northparkes are provided in relevant sections. Unless specified, all figures in the Report include the abovementioned operations for the period of ownership. Entities that we do not control, but have significant influence over, are included in the form of disclosures of management approach. The Report does not include data from equity interest fields/projects, such as joint ventures, where we are not an operator.

This Report should be read in conjunction with the 2024 Annual Report for information pertaining to our financial sustainability and performance and the FY24 ESG Performance Data.

Reporting frameworks

We engage with key internal and external stakeholders to ensure we understand, and report on, Material Sustainability risks and opportunities as well as how these impacts are managed. This Report has been prepared in line with the following frameworks:

- Global Reporting Initiative (GRI) Standards 2021;
- Recommendations outlined by the Task Force on Climate-related Financial Disclosures (TCFD);
- United Nations Global Compact (UNGC);
- United Nations Sustainable Development Goals (UNSDGs);
- Recommendations outlined by the Task Force on Nature-related Financial Disclosures (TNFD); and
- Australian Securities Exchange (ASX) Corporate Governance Recommendation 7.4.

We voluntarily engage with ESG rating organisations that assess and rank our Sustainability performance. These include S&P Global, MSCI, ISS ESG and Sustainalytics.

In 2024, the Australian Treasury introduced mandatory climate-related financial disclosure legislation to Parliament for reporting aligned with IFRS S1 and S2. When enacted, Evolution will be a first reporting entity, applying to annual reporting periods commencing after 1 January 2025 (FY26). Evolution have undertaken internal and external preparatory work for this change through FY24, including a readiness assessment with our external auditor PwC.

Information integrity and report audit

We are committed to reporting our sustainability performance annually, and consistently improving data and information collection processes to ensure better quality data, transparency and insights. In the preparation of the Report, quality and relevant information was gathered, recorded, analysed and disclosed to prepare it in a way that is readily available for examination. Independent assurance reporting is undertaken on National Pollutant Inventory (NPI) and GHG emissions as part of the submission to National Greenhouse and Energy Reporting Act 2007 (NGER Act) and undertaken on Canada's National Inventory Report (NIR) and Greenhouse Gas Reporting Program (GHGRP). Technical experts have also been engaged to complete a range of internal and third-party audit processes on environmental and social aspects.

Currency references

Currency is expressed in Australian dollars unless otherwise stated.

Glossary

A Glossary of terms to define uncommon words is provided at the end of this Report.

16 Acquisition formalised 16 December 2023. Reporting effective date 1 January 2024 unless otherwise stated.

Forward looking statement

This report prepared by Evolution Mining Limited (or 'the Company') includes forward looking statements. Often, but not always, forward looking statements can generally be identified by the use of forward looking words such as 'may', 'will', 'expect' 'intend', 'plan', 'estimate', 'anticipate', 'continue', and 'guidance', or other similar words and may include, without limitation, statements regarding plans, strategies and objectives of management, anticipated production or construction commencement dates and expected costs or production outputs. Forward looking statements inherently involve known and unknown risks, uncertainties and other factors that may cause the Company's actual results, performance and achievements to differ materially from any future results, performance or achievements. Relevant factors may include, but are not limited to, changes in commodity prices, foreign exchange fluctuations and general economic conditions, increased costs and demand for production inputs, the speculative nature of exploration and project development, including the risks of obtaining necessary licenses and permits and diminishing quantities or grades of reserves, political and social risks, changes to the regulatory framework within which the Company operates or may in the future operate, environmental conditions including extreme weather conditions, recruitment and retention of personnel, industrial relations issues and litigation. Forward looking statements are based on the Company and its management's good faith assumptions relating to the financial, market, regulatory and other relevant environments that will exist and affect the Company's business and operations in the future.

The Company does not give any assurance that the assumptions on which forward looking statements are based will prove to be correct, or that the Company's business or operations will not be affected in any material manner by these or other factors not foreseen or foreseeable by the Company or management or beyond the Company's control. Although the Company attempts and has attempted to identify factors that would cause actual actions, events or results to differ materially from those disclosed in forward looking statements, there may be other factors that could cause actual results, performance, achievements or events not to be as anticipated, estimated or intended, and many events are beyond the reasonable control of the Company. Accordingly, readers are cautioned not to place undue reliance on forward looking statements. Forward looking statements in these materials speak only at the date of issue. Subject to any continuing obligations under applicable law or any relevant stock exchange listing rules, in providing this information the Company does not undertake any obligation to publicly update or revise any of the forward looking statements or to advise of any change in events, conditions or circumstances on which any such statement is based.

Approval

This Report has been approved for release by the Board of Directors.

Our approach to Sustainability

Purpose statement

Aligned with our purpose and strategy, we link our stories with transparent disclosure to deliver against our regulatory obligations, demonstrate the positive impact we make through strong partnerships, and highlight the opportunities and risks to creating sustainable value for our stakeholders.

Our Sustainability journey

Our commitment to Sustainability has been core to our business since its inception and it informs who we are and how we think about our relevance in the decades to come. Our first Sustainability Report was produced in FY18, and through FY24, we reflected on the establishment, growth, integration, and uplift stages of our Sustainability efforts.

People and their development remain integral to our success. It is our people who continue to work, upskill, and engage to protect the environment, improve biodiversity outcomes, and build positive legacies that progress our sustainability journey.

We have continued to foster strong relationships with our First Nation partners and communities. We validated these relationships through the inaugural First Nation Summit in FY24 and biennial Stakeholder Perception Survey.

The sustainability landscape has dynamic stakeholder expectations. We commit to taking the time to ensure we genuinely adapt and respond to societal drivers from our local communities, national and international obligations.

We continue to be a significant supporter of being and buying local and promoting the economic future of our communities. Today, 65% of our people live locally. We recognise that sustainability-related risks and opportunities have an impact on our financial position, performance, cash flows, investment decisions, and overall risk management. In FY25, our focus will continue toward alignment with external assurance obligations to ensure our global relevance, pursuing efficiencies and improved assurance mechanisms to continuously monitor and respond to changes in sustainability that may have a material impact.

Sustainability - Integrated into everything we do: Our Sustainability Principles and Strategy

Our Sustainability approach is guided by nine principles which are aligned with UNSDGs prioritised for our business.

Our Principles and Sustainability Strategy are integrated into everything we do, meaning Sustainability is integrated into every aspect of the business, across diverse geographies and cultures, ensuring the execution of our purpose and vision. This approach enables creation of sustainable long-term stakeholder value, where at its heart is our people – where our leaders are visible and our people feel engaged, fit and capable to be their best.

Sustainability and Strategic Planning Policy

The Sustainability and Strategic Planning Policy outlines how Sustainability is integrated into the business. It focuses on holistic risk management and value creation for our employees, business partners, and across major projects and long-term planning, in:

- health, safety and wellbeing;
- environmental stewardship including waste management;
- community relations and cultural heritage;
- stakeholder engagement and communications;
- human and Indigenous rights;
- risk-based decision-making;
- reporting, learning excellence, innovation, and continuous improvement;
- crisis and emergency management and corporate governance; and
- accountabilities for risk, sustainability and strategic planning.

Evolution's Sustainability Principles and Sustainability Strategy - Integrated into everything we do

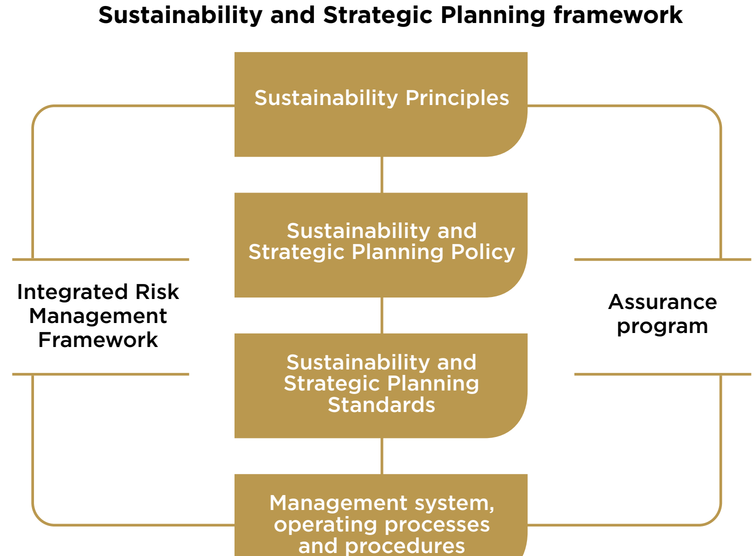
---

Sustainability and Strategic Planning Standards

Our Sustainability and Strategic Planning Standards support the associated Policy, defining the minimum acceptable risk requirements to be met or exceeded in all areas of the business, including operations, exploration, major projects, Group activities and business partners.

Group and operations are audited against these Standards across a multi-year cycle to monitor performance and identify opportunities for improvement. In FY24, all the operations completed detailed LOD1 and LOD2 reviews against the agreed Evolution Standards and risks in the FY24 Assurance Program schedule. The internal audit process for assessing compliance continued to be uplifted through the collation and management of feedback on the functionality of audit tools and Standards. Ongoing reviews by each operation against these Standards are also triggered by internal or external incidents, regulatory changes and / or audit and assurance activity.

Sustainability and Strategic Planning framework



Our approach to Sustainability

Voluntary ESG disclosures and commitments to initiatives

We voluntarily align or adhere to the ESG-related industry reporting frameworks and initiatives presented in the accompanying table. This permits us to demonstrate our commitment to and performance against high standards of environmental, social and governance policy and expectations.

Evolution's voluntary ESG disclosures and commitments to industry and international initiatives

Voluntary disclosure

GRI Standards

Reporting of ESG performance in accordance with GRI requirements since FY21. In FY24, updated GRI reference to 2021 standards.

TCFD

Commenced reporting in line with TCFD in FY20.

100% coverage against the final recommendations of TCFD based on assessment by external consultants. Focus in FY25 to improve the detail and depth of disclosures as per the transition to mandatory disclosures under ASRS.

TNFD

Undertook gap analysis and alignment review with TNFD V0.4 in FY23.

Reviewed final recommendations of TNFD in FY24.

The GHG Protocol: A Corporate Accounting and Reporting Standard

GHG Scope 1 and 2 emissions disclosed in accordance with this standard. Internally tracked Scope 3 emissions calculated in accordance with related GHG Protocol: Technical Guidance for Calculating Scope 3 Emissions.

ISSB

In FY24, liaised with industry associations, Sustainability Advantage, and external consultants to complete a gap analysis of IFRS S1 and S2 against company-wide governance and reporting resulting in a ~72% weighted compliance score.

Industry initiatives

ICMC

Cowal and Red Lake certified to ICMC.

Global Industry Standard on Tailings Management (GISTM)

Tailings management approach integrates climate change, stakeholder engagement, emergency management, our communities, receiving environment, dam safety and post-mine land use.

Church of England Disclosure

Tailings storage facilities (TSFs) disclosed in the Church of England Tailings Dam Management Disclosure which is certified by Evolution's Executive Chair.
See the disclosure here.

International business initiatives

United Nations Guiding Principles on Business and Human Rights (UNGP)

2023 Modern Slavery Statement, and the Report to the Fighting Against Forced Labour and Child Labour in Supply Chains Act, aligned with Australian and Canadian legislation and the UNGP.

UNGC

Joined UNGC in 2021.

Communication of Progress to the UNGC reported annually.

Member of UNGC Network Modern Slavery Community of Practice.

UNSDGs

Positively contributing to progress on the UNSDGs most relevant to our operations through our activities and initiatives, aligned with our Sustainability Principles.

Collaborative efforts with government, civil society and other businesses.

A father emu and his chicks by our Cowal Gold Operations

Our Material Sustainability topics

In this Report, a Material Sustainability topic is one that reflects significant potential for economic, environmental and/or social impacts and risks arising from, and impacting, our operations and value chain, or one that has potential to substantively influence the assessments and decisions of our stakeholders and our business, aligned with GRI 3: Material Topics 2021 and GRI 14: Mining Sector 2024.

The content of this Report was determined through a refreshed materiality assessment undertaken by an independent third-party in FY24 as per our formal triennial review period. It also aligned with and leveraged the findings of our independent biennial FY24 Stakeholder Perception Survey. The FY24 assessment also expanded upon the inaugural FY21 assessment, by embedding a double materiality approach and Evolution's Material Risk Register, and continuing alignment with GRI's quantitative[17] and qualitative assessment methods. Our approach has identified distinct materialities and sentiments of key external and internal stakeholders, enabling us to prioritise Sustainability actions and risk management, inform our Sustainability Strategy, and ensure we report on the most important issues for our stakeholders. For example, internal and external stakeholders were largely aligned on most topics, and external stakeholders prioritised Work, health, safety and wellbeing, and Community and stakeholder outcomes.

The process for determining Material Sustainability topics follows an internal annual, and external triennial, cycle, comprising four phases demonstrated to the right. The resulting topics represent Material sustainability risks and opportunities, and inform our regular risk review process, including through the integration into project feasibility study assessments.

While there were no material shifts in FY24, the process enabled improved consolidation and clarity of definition for our Material topics and enabled a deeper understanding of stakeholders' needs and expectations.

Management approach information

Our management approach related to each Material topic is available in this Report and on Evolution's website at www.evolutionmining.com.au/sustainability/

Materiality assessment process

1 **Understand the organisational context:**
Before identifying impacts, Evolution reviews its activities, business relationships, stakeholders, and ensures the materiality and risk review is aligned with GRI, our Sustainability Strategy and Risk Management Framework.

2 **Identify and assess actual and potential impacts:**
Material Sustainability issues are identified by considering both internal and external factors, including a review and market scan of current and emerging sustainability topics in the media, risk assessments, internal policy, key reporting frameworks, sector-related investor risk ratings, peer benchmarking, regular internal and external stakeholder engagement, and grievance management. Surveys and interview data with internal and external stakeholders support the identification and assessment of the significance of impacts.

3 **Prioritise and validate:**
Topics are ranked based on their importance to the business and external stakeholders using the survey and interview data to determine the sustainability and indicative financial materiality for each topic, eventually being classified as Priority 1 to 4. The classification of topics is tested and validated by our Leadership Team and Board Risk and Sustainability Committee.

4 **Report and review:**
Additional Sustainability topics have also been included in this Report to meet expectations of stakeholders and other reporting requirements. There will be ongoing identification and assessment of our impacts internally on an annual basis and continue the full external refresh cycle every three years.

17 Involved quantification of survey results which included indicative financial materiality scoring.

Our approach to Sustainability

Sustainability Materiality Matrix

Our Matrix is the outcome of our independent double materiality assessment. All topics have been identified as important to Evolution and its stakeholders from direct and indirect influence areas. All issues important to our stakeholders are important to us, however, several have been prioritised. Through the assessment, the topics have been prioritised along the range of **Priority 1 (Business critical), Priority 2 (Extremely important), Priority 3 (Highly important), and Priority 4 (Important).** The Report is structured according to the groupings of these Material topics into Governance, Social, and Environment sections.

Click on each Material topic for more information.

Double materiality matrix

Significance of economic, environment and social impacts *(i.e. Importance to Evolution / financial materiality)* ↑ / Influence on stakeholder impacts and decisions *(i.e. Importance to stakeholders / stakeholder materiality)* →			
	3	Governance and Ethics Water management 2	Climate Risk and Resilience Community and stakeholder engagement Cultural heritage and Indigenous stakeholder outcomes Energy and Emissions Environmental impacts and Waste (including Circular economy) Tailings management Work health, safety and wellbeing 1

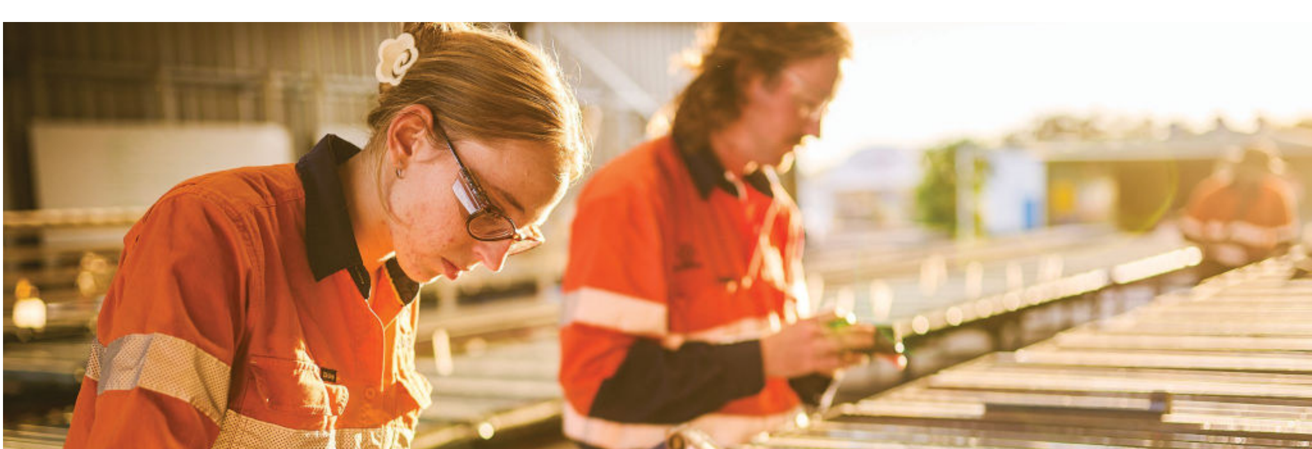
FY24 Material topics mapped against the UNSDGs and Evolution Sustainability Principles

Evolution recognises our opportunity to help society and positively contribute to the UNSDGs. These goals have been a key consideration in the development of our Strategy, with mapping of all 17 UNSDGs to our Material topics.

Material topics - definition and alignment with UNSDGs

	Material topics - Click the topic to read more	UNSDG Index	Principle
Governance	**Governance and Ethics** Operating with robust governance, ethics and integrity across our business activities. This includes maintaining robust policies, Board and executive composition, transparent reporting, and combatting bribery and corruption. Combines Governance and compliance and Anti-bribery and corruption.	16 PEACE, JUSTICE AND STRONG INSTITUTIONS; 17 PARTNERSHIPS FOR THE GOALS	8
	Crisis response Maintaining long-term business resilience and preparedness against environmental and social crises.	3 GOOD HEALTH AND WELL-BEING; 17 PARTNERSHIPS FOR THE GOALS	1
	Cyber security Implementing controls to reduce internal and external cyber risks which may result in the disruption of critical systems and/or equipment, fraudulent transaction/impersonation, and the loss, disruption, or exposure of sensitive business information. This includes actively managing and regularly testing the protection of our data and operating systems.	17 PARTNERSHIPS FOR THE GOALS	2
	Sustainable procurement Integrating sustainability-related considerations and due diligence into Evolution's supply chain to ensure the responsible purchasing of goods and services. This includes considerations relating to environmental impacts, Indigenous corporations, security, supplier conduct, and the prioritisation of local procurement where possible.	7 AFFORDABLE AND CLEAN ENERGY; 12 RESPONSIBLE CONSUMPTION AND PRODUCTION; 17 PARTNERSHIPS FOR THE GOALS	1,8
	Modern Slavery and Human Rights Upholding the fundamental rights and dignity of all our stakeholders and complying with the modern slavery legislations in Australia and Canada. This includes ensuring equitable work hours, fair compensation, and conducting thorough supply chain assessments to identify and mitigate any risks of modern slavery and human rights violations.	8 DECENT WORK AND ECONOMIC GROWTH; 10 REDUCED INEQUALITIES; 17 PARTNERSHIPS FOR THE GOALS	7



The Discovery team logging core at the Ernest Henry core shed

Our approach to Sustainability

	Material topics - Click the topic to read more	UNSDG Index	Principle
Social	**Work health, safety and wellbeing** Protecting the physical, mental and psychosocial health of our people and reducing risks of accidents and hazards are essential to ensure our people are fit to work to safeguard production, and our social and regulatory licence to operate. This includes the management of road transport and safety (e.g., road dust) to minimise road and aviation accidents as well as the use, storage, handling, transport and disposal of hazardous chemicals and upholding process safety measures. Combines with Transport safety and Hazardous chemicals management.	3 Good health and well-being; 8 Decent work and economic growth; 14 Life below water; 15 Life on land; 17 Partnerships for the goals	1, 2
	Diversity and Inclusion Promoting all forms of diversity and inclusion within the workplace. This includes encouraging diversity of thought, providing equal opportunities for career advancement, recognising and addressing inherent biases, reporting transparently on diversity performance, and improving participation rates, particularly for women and Indigenous employees.	5 Gender equality; 8 Decent work and economic growth; 10 Reduced inequalities; 17 Partnerships for the goals	1
	Talent attraction, retention and employee engagement Building a capable and sustainable workforce through ongoing investment in attracting the best talent, building a positive organisational culture, providing growth and development opportunities, and prioritising local employment. Combines previously separate topics.	4 Quality education; 5 Gender equality; 8 Decent work and economic growth; 17 Partnerships for the goals	1
	Cultural heritage and Indigenous stakeholder outcomes Working with Indigenous communities and First Nations partners of the land on which we operate to create positive outcomes and protect and preserve places and items of cultural significance. This involves identifying investment and Indigenous employment opportunities. This also includes building cultural awareness, knowledge and competency within Evolution. Combines previously separate topics.	1 No poverty; 2 Zero hunger; 10 Reduced inequalities; 16 Peace, justice and strong institutions; 17 Partnerships for the goals	6
	Community and stakeholder engagement Creating positive outcomes for our Indigenous and non-Indigenous communities and stakeholders by managing expectations and grievances, delivering mutually beneficial agreements, investing in local communities, supporting positive outcomes for all stakeholders, prioritising local community employment, and maintaining transparent reporting and engagement with various stakeholders. Combines previously separate topics, and Local employment.	1 No poverty; 2 Zero hunger; 3 Good health and well-being; 10 Reduced inequalities; 11 Sustainable cities and communities; 16 Peace, justice and strong institutions; 17 Partnerships for the goals	1, 5, 8

	Material topics - Click the topic to read more	UNSDG Index	Principle
Environment	**Climate Risk and Resilience** Adapting and responding to the physical and transition impacts of climate change and efforts to build resilience across the organisation.	11 Sustainable cities and communities; 12 Responsible consumption and production; 13 Climate action; 17 Partnerships for the goals	4
	Energy and Emissions Monitoring, management and reduction of carbon emissions including emissions in the supply chain and downstream of Evolution's operations. This also includes the exploration of business opportunities aimed at reducing carbon emissions or contributing to decarbonisation of the grid (i.e., Mt Rawdon Pumped Hydro Project (MRPH)).	7 Affordable and clean energy; 12 Responsible consumption and production; 13 Climate action; 17 Partnerships for the goals	4
	Tailings management Protecting the health and safety of employees, contractors and the broader community by designing, constructing, operating and closing TSFs in alignment with the highest standards. Current TSFs are serviced regularly to seek continual improvement and reduce risk of failure.	14 Life below water; 15 Life on land; 17 Partnerships for the goals	3
	Environmental impacts and Waste (including Circular economy) Minimising our environmental impacts and complying with environmental regulations relating to noise, environmental discharges, air emissions, cyanide, waste rock, industrial waste, organic and inorganic waste. This includes product stewardship with regards to managing our products through the entire life cycle based on circular economy principles. Combines the previous Effluents and waste, and Environmental management.	6 Clean water and sanitation; 11 Sustainable cities and communities; 12 Responsible consumption and production; 14 Life below water; 15 Life on land; 17 Partnerships for the goals	3
	Water management Ensuring oversight and implementation of practices aimed to ensure the security of water supply, optimising the quality and efficiency of water usage and identifying opportunities for water reuse and recycling. This includes mitigating potential impacts on local communities and the environment.	6 Clean water and sanitation; 17 Partnerships for the goals	4
	Land use and Biodiversity Protecting and restoring biodiversity and ecosystems, including strategies to manage fire, pests and weeds.	12 Responsible consumption and production; 14 Life below water; 15 Life on land; 17 Partnerships for the goals	3
	Mine closure, rehabilitation and legacy Managing the environmental and social considerations relating to mine closure, including restoring land to its natural state or rendering suitable for future uses such as conservation, agriculture and the clean energy industry. Combines previously separate topics.	1 No poverty; 2 Zero hunger; 10 Reduced inequalities; 14 Life below water; 15 Life on land; 17 Partnerships for the goals	3, 5

Governance and Assurance

"By upholding strong governance principles and collaborating with our stakeholders, we continue to deliver our objectives and be a trusted partner in our communities and industry."

Evan Elstein, Company Secretary and Vice President Information Technology, Communications and Corporate Affairs

Environmental monitoring is undertaken regularly at Cowal

Governance and ethics Ⓜ

Management approach

We are committed to fulfilling our obligations and responsibilities to our stakeholders through robust and transparent corporate governance practices. Operating in accordance with high standards of corporate governance enables the identification of risks and opportunities that drive sustainable value creation for all stakeholders.

Our Corporate Governance Statement reports against the ASX Corporate Governance Council's Fourth Edition Corporate Governance Principles and Recommendations. Throughout the reporting period that ended 30 June 2024, the Directors believe that our governance arrangements align with the fourth edition of the ASX Corporate Governance Council's Corporate Governance Principles and Recommendations. Where the Company's corporate governance practices do not meet with all the practices recommended by the Council, or the Board does not consider it practicable or necessary to implement, the Board's reasoning for any departure is explained in the Corporate Governance Statement.

As per Recommendation 7.4, this Report details information on the management of Evolution's Material environmental and social risks.

Board of Directors

The Board of Directors retains ultimate responsibility and accountability for our Sustainability Strategy, priorities and performance. The Board is also the body that formally reviews and approves our Sustainability Report.

The Board is supported by the following committees:

- Audit Committee
- Risk and Sustainability Committee
- Nomination and Remuneration Committee

The role of the Risk and Sustainability Committee is to oversee the Company's risk and sustainability management systems, policies, practices and plans on behalf of the Board, and report the results of its activities to the Board as set out in its Charter. The Risk and Sustainability Committee is responsible for the formal review and oversight of the following areas: Health, safety and security; Environment and Tailings dam governance; Community and social performance; Human Rights; Cultural heritage; Operational risk management; Business risk management; Cyber management and Legal and regulatory Compliance.

We are committed to the identification, monitoring, and management of Material business risks of our activities via the Risk Management Framework. The Sustainability and Strategic Planning Policy and Sustainability Performance Standards are available on the Company's Corporate Governance webpage which can be accessed here.

The Risk and Sustainability Committee formally reviews and endorses the Report for approval by the Board and ensures that all Material topics are covered.

Board diversity

We recognise the benefits that diversity provides to our Board of Directors. A diverse mix of skills, expertise, experiences, genders, ages, and characteristics leads to diversity of perspectives and more robust understanding of opportunities, issues, and risks for improved decision outcomes. In alignment with the Australian Government's Workplace Gender Equality Agency (WGEA) and the ASX recommendations, Evolution maintains a target of no less than 30% female representation on the Board. As of 30 June 2024, Evolution's Board has eight members (75% male and 25% female); six are independent, non-executive Directors (67% male and 33% female) and two are executive (100% male). This ratio has improved with the appointment of Ms Fiona Hick as a Non-Executive Director of the Company and a member of the Risk and Sustainability Committee, effective from 1 July 2024.

The Board is structured to ensure that the Directors' skills and experience align with our goals and strategic direction. Additional workshops and discussions are facilitated to update the Board on material matters, particularly on emerging risks. An example of this is the ongoing discussion on Material risk management during Board meetings at least three times a year, and site visits wherein the Board demonstrate visible leadership, experience and validate risk management and verification activities, bringing the Group Risk Register to life through direct interactions with our people. The functions and responsibilities for the Board and each Committee are set out in the respective Charters. Information on Board members and Charters is available to view in the Corporate Governance section of our website.

The following policies were reviewed and updated in FY24 and are available to view in the Corporate Governance section of our website.

- Board Charter
- Anti-Bribery and Corruption Policy
- Continuous Disclosure Policy
- Employee Code of Conduct
- Privacy Policy
- External Communications Policy
- Social Media Policy
- Shareholder Communication Policy
- Supplier Code of Conduct
- Sustainability and Strategic Planning Policy
- Procurement Statement
- Employee Share Option and Performance Rights Plan Rules

Linking remuneration to Sustainability

Our continued commitment to Sustainability is reflected in ~30% of the annual STIP being linked to the achievement of specific Sustainability goals and targets, including key performance conditions and strategic imperatives on progress towards Net Zero. It reinforces the importance we place on delivering on our Sustainability commitments and strengthens the link between Management remuneration and the management of climate-related risks. More information can be found in the FY24 Annual Remuneration Report (Evolution Mining Limited Directors' Report 30 June 2024).

All data related to sustainability metrics for STIP payments are validated via third-party audit processes.

Assurance and audit

An annual assurance plan is approved by the Leadership Team and endorsed by the Risk and Sustainability Committee. Findings from the FY24 assurance activity highlighted areas for improvement identified across the Sustainability portfolio. As part of the assurance process, all operations submitted Sustainability Improvement Plans and delivered these supported by ongoing tracking, action review, close out and continual improvement activities.

The closure of material and critical actions is considered a leading indicator and is important to ensure actions that are material and critical to preventing an incident are monitored and delivered. This metric is also included within the overall business scorecard and is linked to the remuneration strategy across all levels of the business. This reinforces the importance of tracking, reporting and the closure of findings that may arise from audits, incident review and internal or external incidents. In FY24 there were no overdue critical or material actions. This data is also validated and independently audited.

A diverse mix of skills, expertise, experiences, genders, ages, and characteristics leads to diversity of perspective and more robust understanding of opportunities, issues, and risks for improved decision outcomes.

Ernest Henry team members by the processing plant

Governance and Assurance

Risk mitigation and management

A rigorous risk management framework and system of internal controls has been established to effectively identify, manage and mitigate risks, to inform decision-making and the successful delivery of our strategy and plans.

Our approach to effective risk-based decision-making, proactive risk management and continual improvement is undertaken across the business underpinned by our Sustainability Principles, Risk Assessment Matrix, Sustainability and Strategic Planning Policy, associated Standards, and the Integrated Risk Management Framework. Supporting systems and procedures align with principles of international standards and guidance e.g., International Council on Mining and Metals (ICMM).

Across the business, we conduct risk assessments to evaluate enterprise and operational risks that may impact people, health and safety, environmental, social, business, assets, finance, reputational risks and opportunities. Our Integrated Risk Management Framework, based on ISO 31000:2018 Risk Management Guidelines, provides the structure for risk identification, analysis, monitoring, mitigation and reporting. It considers and identifies a broad spectrum of stakeholders, potential internal and external risk exposures, potential downside and upside risk-related opportunities across the business.

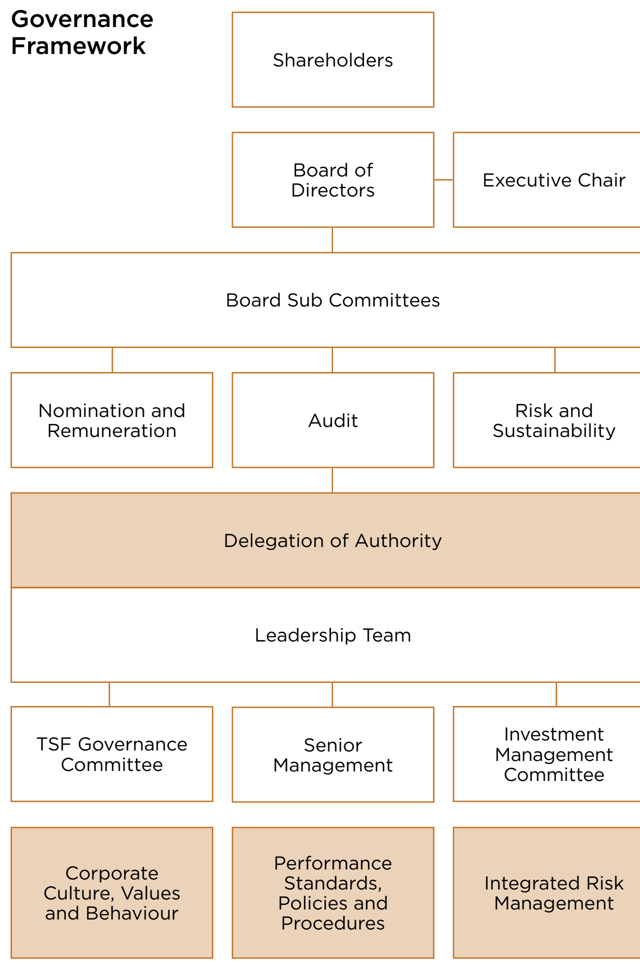
We review the effectiveness of our risk management frequently through quarterly risk evaluations, led by functional risk owners, Group and site-based risk owners and champions, and senior leaders at the business, functional and operational levels. In these reviews, Group subject matter experts work with sites to evaluate incident learnings, audits and control effectiveness across the 15 Group Material risks and 12 operational health, safety and environment risks. The Group Risk Register is subsequently updated, approved by the Leadership Team and endorsed by the Board as a minimum annually. These evaluations provide valuable insights to continuously challenge and deepen the understanding of risk, supporting the maturity of our approach, particularly to address emerging risks such as climate change, energy and emissions, human rights, process safety issues and globalisation.

In FY24, the Integrated Risk Management Framework and Group and Site Risk Registers were reviewed in detail with attention to the Group's enterprise and operational Material and Critical risks. These were approved by the Leadership Team and endorsed by the Board. The intent was to drive further review, oversight and control of risks most material to the business.

The Risk and Sustainability Committee oversees the effectiveness of our risk management approach linked to evaluating the appropriateness of performance and resourcing. As part of its responsibility, the Board ensures balance between risks incurred and potential return to shareholders is maintained, that risk management programs are in place and effective (including internal control frameworks, insurance and loss prevention efforts) and provides oversight on the effectiveness of the policies and standards for monitoring and managing risks. A list of Material business risks is prepared for review by the Board Risk and Sustainability Committee three times per year, with follow-on reporting and discussion with the Board.

The Governance Framework informs our integrated Risk Management Framework.

Governance Framework



Our approach to Sustainability
Making Evolution a career highlight
Governance and Assurance
Trusted partner in our communities
Safe and engaged workforce
Responsible environmental stewardship

Industry associations

Involvement with industry associations keeps us current and aligned regarding public policy, emerging trends, regulatory updates, stakeholder interests and the sharing of industry best practices. In FY24, we maintained representation on industry working groups in all jurisdictions, including to address transitional climate risk. Evolution may not align with each public position but where there is a benefit in constructive dialogue or advocacy, active membership and contributions are maintained including with the following associations:

Organisation	Board representation	Health, Environment, Community and/or Indigenous relations representation
New South Wales Minerals Council	Yes	Yes
Queensland Resources Council	Yes	Yes
Chamber of Minerals and Energy of Western Australia	No	Yes
Goldfields Regional Network Forum (WA)	No	Yes
Gold Industry Group (Australia)	Yes	Yes
Lake Cowal Foundation (Australia)	Yes	Yes
Ontario Mining Association (Canada)	No	Yes
West Wyalong Advocate	Yes	N/A
NSW Government Sustainability Advantage	N/A	Yes
United Nations Global Compact	No	Yes (Modern Slavery Communities of Practice)
Electric Mine Consortium	N/A	Yes

Regulatory compliance

Regulatory compliance supports our licence to operate. Evolution complies with relevant laws, regulations and authorisations as required during the various stages of project development and operations. We implement a suite of detailed management plans, maintain a register of approvals, permits and obligations, conduct targeted audits of compliance against applicable regulatory standards and report outcomes to the Audit and Risk and Sustainability Committees. We engage with a range of specialist consultants and subject experts (including legal due diligence) to advise on managing compliance matters and aspire to engage regulators early to maintain and enhance our regulatory licence to operate.

During FY24, there was one event of two penalty infringement notices being issued to Cowal for administrative non-compliances with permit conditions and another at Mt Rawdon relating to an environmental protection order resulting from unseasonal rainfall in late 2022. Both matters have been addressed and closed out with the relevant government authorities. There was no environmental harm related to these events.

There is a work health and safety enforcement action underway related to an event at Mungari where a contract worker operating their equipment injured their arm when guarding was breached. One Enforcement Undertaking was entered and accepted by the Regulator related to an event where a worker received burns from a small fire caused by an empty intermediate bulk container (IBC) at Northparkes. (Note - this event occurred when the operation was not under Evolution ownership). There was no other formal enforcement action undertaken by a relevant government authority in FY24.

Testing, monitoring and measurement being undertaken at the Cowal processing laboratory

Ghost gum trees may occur at several of our operations

Crisis management and response Ⓜ

We use an established Crisis Management and Business Continuity approach to identify and manage incidents with potential to disrupt the operation. Rigorous checking of control measures ensures effectiveness to mitigate the risk likelihood and consequence of any potential event.

The control measures incorporate organisational responsibilities, available internal and external resources, communication, escalation and training requirements, supported by clear processes, guidelines and procedures to manage crisis situations.

Our Incident and Crisis Management Planning is a live process, with regular reviews and updates to incorporate continued learning and improvement. Throughout FY24, various operational activities (actual or scenario-based) were undertaken to strengthen our training, with particular focus on leadership roles critical to any incident command, and recognising the importance of structure, responsiveness, communication and competence needed throughout response teams in these situations. We also engaged Mettle Global to develop scenario-based training to support our preparedness and resilience ahead of any potential critical incidents. In FY24, active and ongoing crisis management, including the response of and successful recovery of the Ernest Henry Operation post the significant unseasonal rain event, provided our response teams with real life learnings in incident and crisis management. This Ernest Henry event, which impacted production throughout FY24, served as a critical learning in crisis management. We were proud of the response and recovery efforts by our people to bring the site back to production within seven months. Lessons were also shared broadly across the rest of the business.

Extreme weather and health events

Extreme weather is one of the most Material climate-related risks to our business and value chain, along with water security, energy and emissions, and extreme health events.

Each operation is located in geographically unique parts of Australia and Canada, often adjacent to First Nation partners, landholders and regional communities, where support for the communities and other nearby mines is part of our overall first response effort. Our annual risk assessments and TCFD/TNFD alignment reviews support our targeted stakeholder engagement and reiterate the need to test the effectiveness of controls and mitigations for short, medium and long-term risks including cyclones, flood, long-term drought, bush and forest fires, late snow cover, food and water borne illness and broader health events. In FY24, we embedded our learnings from the Ernest Henry unseasonal weather event, and other natural flood events within our communities, to ensure resilience is built into our communities and business. Climate risk assessments and mitigation were further integrated into all operations, due diligence and project decision-making, providing greater insight into the range of physical impacts and opportunities for improvement in our response planning within the value chain.

Mitigating actions at each operation include:

- preparing for cyclones and wet weather events;
- rain and wind proof infrastructure and shelters;
- certified water storage and drainage networks;
- proactive and preventative maintenance of equipment and structures;
- secured buildings and infrastructure;
- telemetry weather detection systems, including lightning;
- emergency response equipment including fire tenders and ambulance and personnel, training, scenario and competition;
- defined communication channels; and
- first responder and crisis support and response for communities and nearby mines.

Business responses are formally recorded in Trigger Action Response Plans (TARPs), Emergency Response Plans and Business Continuity Plans, and regularly reviewed. Robust and proactive strategic planning is integral to ensuring business continuity and the health and safety of the communities where we operate. We support our communities' resilience and development through our volunteers and Community investment program.

Business ethics

The Code of Conduct sets the standards for our people to act ethically, responsibly and lawfully and applies to Evolution Directors, all employees, contractors and consultants employed to undertake work on behalf of, or for Evolution and its subsidiaries. This is complemented by internal supporting policies which include detail into defined escalation processes and how matters are transparent and reported through to the Board. We ensure that the Code of Conduct and responsibilities therein are understood by our employees, and included as part of contractual agreements with consultants, advisors and contractors. We encourage employees to report known or suspected breaches of the Code of Conduct and any other policies and directives, and to raise any other serious concerns they may have. Any such report is responded to immediately and investigated accordingly. Values and Leadership Behaviours within the Code of Conduct are assessed in individuals' performance reviews, and the resulting ratings factor into annual remuneration STIP and other outcomes.

To remain in step or above industry standards, regulatory amendments, and the operating environment we conduct reviews of our governance in relation to business ethics, including the Code of Conduct. In FY24, we engaged an employment law firm to conduct an audit on our compliance with the new Australian 'Respect@Work' legislation. It proactively identified opportunities to maintain and strengthen safe and inclusive workplaces and villages across our operations.

We have adopted the following recommendations:

- updated the Code of Conduct, including strengthening anti-harassment, discrimination and bullying policies;
- introduced a new Sexual Harassment Policy including the role of a bystander;
- adapted physical accommodation, lighting and security design at our sites to support females' physical and psychological safety and wellbeing in the workforce; and
- implemented mandatory Respect@Evolution training for all new and current employees, comprising the requirements outlined in the updated Code of Conduct and Anti-bribery and Corruption Policy.

These recommendations are complemented by our established broad-based communication approaches to ensure that all workers are aware of how they and their colleagues should conduct their duties.

Economic performance

Our performance is continuously monitored against its stated objectives, opportunity and risk assessments are conducted, and findings are integrated into the financial strategy.

Refer to the Annual Financial Report from page 130 of the Annual Report for information on Evolution's economic performance.

Anti-bribery and corruption

Evolution views any bribery or corrupt behaviour as unacceptable. We do not operate or produce in the 20 lowest rankings in Transparency International's Corruption Perception Index 2023. We have an Anti-bribery and Corruption Policy which extends across all our business and activities, and applies to Evolution Directors, all employees, contractors, business partners, and consultants employed to undertake work on behalf of, or for Evolution and its subsidiaries. Anti-bribery and corruption training is mandatory for all employees through the Respect@Evolution training, including definitions on conflict of interest.

We expect contractors, suppliers and business partners to comply with and monitor training compliance with the Anti-bribery and Corruption Policy, which is included in the Supplier Code of Conduct. In addition, we have an anti-bribery and anti-corruption clause in all our supplier contracts and undertake vendor due diligence as part of the supplier onboarding and contract renewal process.

All reported incidents of non-compliance or potential non-compliance are taken seriously, reviewed, and investigated. In FY24, there were no reported incidents of anti-bribery or corruption.

Whistleblower Policy

A framework has been established for individuals to raise concerns that relate to potential or actual unacceptable conduct. This framework is detailed in the Whistleblower Policy and Whistleblower Standard which includes the defined elements of independent reporting and investigation procedures, disclosure protection, along with the associated corporate governance. They are communicated regularly to employees and contractors via onboarding processes, the Code of Conduct, the People and Culture department and the intranet.

The process is managed by an external third-party in conjunction with the People and Culture department. Whistleblowing events and any reports and their associated actions are reported to the Board.

Evolution is committed to disclosing reports, areas of concern, and investigation and remediation outcomes. There were three Whistleblower cases reported in FY24 via the FairCall (KPMG) service in Australia and Canada. Two cases were found to be unsubstantiated: one case was for harassment and the other for not agreeing with an investigation outcome. The third case of smoking on site was substantiated.

Political parties and public organisations

In line with our policies, we uphold ethical and values driven business conduct, including conduct in alignment with our climate targets and agreements. We do not undertake any political activity or sponsor any political parties, movements or public non-governmental organisations, nor make any political or charitable contributions to support any such parties, movements or organisations. We are committed to disclosing political payments. In FY24, no donations or payments were made to political organisations.

Transparency and disclosure

We are committed to open and transparent dealings with all stakeholders. Information is published on our operational, financial and sustainability performance in a timely manner through several communication channels, including this Report, media releases, stock exchange announcements, social media, newsletters and community and investor meetings. We respond to stakeholder enquiries and requests for information as required.

Tax Transparency Code

Payment of tax is an important element of our contribution to the economic development of Australia and Canada. At a minimum, we comply with relevant legislation, including the Australian Government's Voluntary Tax Transparency Code. Payments to government, including taxes and royalties, are provided separately in the 2023 Tax Governance Statement available at the website and ESG Performance Data (Economic performance section). Evolution has a publicly available Board approved Tax Governance Policy that complies with the guidance set out by the Australian Taxation Office.

Cyber security Ⓜ

Like many businesses and organisations, Evolution faces constant and evolving cyber threats. The operating and control systems at our operations increasingly use digital platforms and technology-based solutions. As such, the security of these systems is crucial for the safe and efficient operation of our assets, making cyber security one of our Material and emerging (long-term 3 to 5+ years) business risks. The risks of accidental or unauthorised access, corruption, disruption to business operations, theft of intellectual and other property, and damage pose significant financial, reputational, and psychosocial future impacts to Evolution. We remain vigilant regarding any cyber risks, and the workforce receives regular awareness training and communications on identifying and managing potential cyber threats.

A risk-based approach is applied to manage cyber-related security risks applying good practice across standard processes. We leverage leading frameworks such as National Institute of Standards and Technology (NIST) and guidance from the Australian Government's Cyber Security Centre which are supported by independent security partners and internal expertise. There are a range of measures and controls implemented to manage cyber risk including:

- A Cyber Security Policy and strategy program applicable to all employees, as part of the Evolution Information Technology (IT) Strategy, with clear responsibilities and a centralised IT function.
- Mandatory cyber awareness training for all employees (90%[18] compliance against 90% target) supported by ongoing awareness alerts and education.
- Defined Disaster Recovery scenarios with Disaster Recovery testing on six-monthly cycles.
- Governance reporting and regular assurance including third-party audits, vulnerability analyses, simulations, Incident Response exercises, penetration testing, maturity assessments against standards, and independent review.
- Regular cyber security risk assessments to ensure new technology is appraised for security risks.
- Regular internal cyber reviews and checks including daily systems checks, regular threat hunting, log analysis, and access reviews.
- Encryption of laptops and mobile devices to ensure information is inaccessible on lost or stolen devices.
- Defence-in depth and layering of security mechanisms within our networks including Multi-factor-Authentication (MFA) mechanisms for access.

Independent assessments and reviews have indicated an effective upkeep of cyber maturity of our organisation. In FY24 we continued to actively strengthen our cyber security framework with a focus on:

- Training our people - Celebrating our Diamond (2nd Place) award in 'Best eLearning Design' and 'Best Interactive Scenario (Industry Specific)' at the 2023 LearnX Awards for the Evolution Cyber Security Module.

- Cyber security risk assessments against our IT and operating technology (OT) environments, and cyber supply chain risk assessments.
- Cyber security internal and external penetration testing and remediation activities.
- Continued auditing OT controls assessments.
- Desktop incident response simulations and updated response plans.
- Providing secure and dedicated remote access solutions for our technology support vendors and contractors.
- Reviews and updates to our cyber security policies.

Management and the Board have continued to recognise cyber security as a Material risk and receive regular reports on cyber security preparedness. It is a standing agenda item on the Board Risk and Sustainability Committee agenda, with reporting at each Committee meeting with detail on Management's efforts and initiatives to monitor and prevent cyber incursions, incidents and any emerging threats. Significant investment in a comprehensive end-to-end IT and OT systems is driven by a recognition that Evolution needs to continually invest in cyber security.

Subsequent to the end of the financial year, a ransomware attack occurred in August 2024 which impacted the IT systems. It was contained by 12 August 2024. This event was proactively managed and focused on protecting the health, safety and privacy of our people, together with the Company's systems and data. TARPs were executed, with operations managed safely, with no material impact to production. The incident was also reported to the Australian Cyber Security Centre.

18 Excludes Northparkes due to ongoing system integration as of 30 June 2024. 100% of relevant personnel at Northparkes completed an equivalent compliance in FY24.

Evolution's Cyber security framework

Business objectives and risks

Cyber threats

Unauthorised loss of data	Unauthorised change of data	Financial loss through cyber deception	Business disruption due to cyber attack

Governance

Strategy and Operating Model	Policies, standards and architecture, e.g., IT Acceptable Use Policy	Cyber risk culture and behaviour	Cyber risk management, metrics and reporting

Secure		**Vigilant**	**Resilient**
Identify lifecycle management	Use access control	Penetration testing	Incident and crisis readiness
Role based access control	Privileged use access control	Cyber threat intelligence	Incident response
Secure software development lifecycle (SDLC)	Post development application protection	Brand protection	Business continuity management and disaster recovery
Asset management	System security	Security event monitoring	
Malware protection	Network security	Patch management	
End use device security	Human resources security	Vulnerability management	
Physical security	Data loss prevention	Cyber analytics	
Encryption	Information lifecycle management (including backups)	Security platform administration – daily, weekly, monthly, quarterly	
Data privacy	Information classification		
Cloud security	Third-party risk management		

Sustainable procurement Ⓜ

Management approach

Our sustainable procurement and partnering approach enables a positive influence on our suppliers' Sustainability performance and business conduct. We proactively identify opportunities to benefit communities by how and where we source our goods and services. This includes integration of sustainable procurement considerations into the concept, (pre)feasibility, design and execution stages of projects. We collaborate with our contractor partners to ensure Sustainability is hard-wired into the long-term delivery of all our projects and operational activities. By embedding our Sustainability Principles and commitments into our end-to-end procurement practices, we manage Sustainability risks and opportunities, minimise adverse impacts and promote positive environmental, social and economic outcomes through our value chain.

To improve our supply chain's social and ethical footprint, our suppliers are screened and required to be accountable for their actions with commitments to ensure they conduct their business in alignment with our values and behaviours. We expect our contractors and suppliers to comply with high standards of governance, all applicable laws including Australian and Canadian Modern Slavery legislation, and our policies including the Supplier Code of Conduct and Procurement Statement, which are endorsed by the Board. This is a requirement in our contracts for which the parties must be compliant, supported by active engagement and key performance indicator (KPI) management.

Evolution supply chain

Exploration and Discovery

- Drilling contractors
- Geology and geophysical contractors
- Analytical laboratories
- Health and Safety specialists
- Surveying
- Earthmoving contractors
- Environmental and water consultants

Support services

- Site accommodation management services
- Power, communication and IT services
- Insurance
- Employee benefits
- Personal protective equipment (PPE) and Personal protective clothing (PPC)
- Legal and specialist support
- Medical, health and safety services
- Labour supply
- Water and waste management

Mining

- Mining and haulage contractors, plant and equipment
- Cement and ground support supply
- Explosives supply and blasting services
- Fleet, maintenance, parts and equipment
- Fuel, oil and tyre supply
- Blasting software and consultants
- Mining communication
- Geotechnical services

Processing

- Operations and maintenance contractors
- Supply of grinding media flocculants
- Chemicals and reagents supply
- Laboratory services
- Civil contractors
- Fuel and gas supply

Transportation

- Freight services
- Haulage services
- Port services
- Stevedoring
- Shipping
- Bus services
- Air charter services
- Travel service

Our sustainable procurement activities are conducted in accordance with our Human Rights Performance Standard, Modern Slavery Business Guide, Procurement Statement, and Supplier Code of Conduct. They focus on:

- Prohibiting any form of forced labour, including child and slave labour and human trafficking.
- Identifying, assessing and addressing modern slavery risks through the Sustainable Supplier Risk Management program in alignment with the Australian *Modern Slavery Act 2018 (Cth)*, and Canadian *Fighting Against Forced Labour and Child Labour in Supply Chains Act (S.C. 2023, c.9)* (the Canadian Act).
- Supporting local, regional, and First Nation communities by increasing Indigenous participation and supporting small and local businesses.
- Supporting our Net Zero commitment, and environmental stewardship including waste management and biodiversity.
- Increasing capability and awareness among internal and external stakeholders, including suppliers.
- Communicating our expectations and commitments to human rights to all stakeholders.
- Monitoring our performance and the effectiveness of our human rights policies and procedures.

In FY24, Sustainability continued to be used as a performance driver in Evolution's procurement process by:

- Integrating Net Zero pathway commitments and considerations into procurement practices, particularly for sourcing electricity and energy intensive goods.
- Exploring opportunities for the use of biofuels and clean energy options with a number of key suppliers.
- External partnership building opportunities for Scope 3 emissions reduction and influence via our value chain.
- Strategies to reduce, recycle and reuse high volume consumables categories, including tyres and lubricants.
- Proactive opportunities to work with and supply from our First Nations partners, enhancing Indigenous participation and our Indigenous Procurement approach as detailed in the accompanying case study.
- Developing our fourth Modern Slavery Statement and submitting our first report under the Canadian Act.
- Participating in the UNGC Modern Slavery Communities of Practice for deeper understanding of challenges, knowledge sharing, upskilling, and identification of continuous improvement opportunities.

In FY24, Evolution had over 4,500 active suppliers and contributed $1.87 billion in payments to suppliers.

Evaluation of Sustainability and business conduct in tenders

Our suppliers must engage in our robust tender evaluation processes that incorporate core Sustainability evaluation criteria to support risk management in our upstream and downstream activities. The core criteria include Health and Safety, Environment, Climate, People and Culture, Community and First Nations support, Modern Slavery and Human Rights.

Specific considerations include: corporate governance and accountability structures; existing Sustainability policies, management plans, programs, risk assessments, monitoring, incident reporting and performance metrics; quantification of emissions and initiatives to reduce emissions; policies or practices to enhance inclusion and diversity; business ethics and conduct; as well as community and First Nations plans and support.

In FY24, we continued to assess suppliers against our evaluation criteria for Sustainability and business conduct as part of our standard tender process. Our evaluation criteria continue to mature, and in FY25 we will continue to enhance our evaluation tools and templates to drive positive environmental, social and economic outcomes through our value chain.

In FY24, Northparkes produced 20,284 ounces of gold in the six and a half months since acquisition in December 2024

Modern Slavery and Human Rights Ⓜ

Management approach

Respect for human rights is a core value at Evolution. We maintain a zero-tolerance approach to any form of modern slavery or adverse human rights impacts. We acknowledge our role in eradicating modern slavery and are committed to operating responsibly and upholding the highest ethical standards. We expect the same from our suppliers and partners as per our Supplier Code of Conduct. We reject any activities that may cause or contribute to modern slavery, including forced or bonded labour, child labour, discrimination, human trafficking, slavery, servitude, forced marriage or deceptive recruiting or remuneration for labour or services. We also acknowledge the nature and extent of modern slavery means there is a risk that it may be present in our business operations and supply chains.

Our strategy of operating only in Tier 1 jurisdictions of Australia and Canada mitigates our geopolitical, security, and human rights risks. We have no exposure to artisanal and small-scale mining, nor conflict-affected and high-risk areas, in proximity to our existing and exploratory operations.

We acknowledge that operations and activities could potentially cause, contribute to, or be directly linked to negative impacts on the livelihood and human rights of individuals and communities. We seek to evaluate, prevent and mitigate any potential for adverse impacts and to contribute to the promotion and protection of human rights. This includes maintaining secure grievance mechanisms at each of our operations, including Whistleblower protections.

Our Human Rights Sustainability Performance Standard establishes principles and actions for how we identify, prevent, mitigate, track and report on human rights risks and issues associated with projects and operations. It draws on the Universal Declaration of Human Rights, the UNGP, and the UNGC. As a signatory to the UNGC, we have committed to advancing all Ten Principles, including Principles One and Two: human rights and respect for human rights, and incorporate principles across our processes and systems. These commitments also inform our Modern Slavery Business Guide which embeds the risk assessment of potential or actual modern slavery occurring in our supply chains, with steps to mitigate the risk, and actions required to assure our business is free from modern slavery. All personnel are instructed that remediation actions adopted should be designed to work with suppliers to mitigate modern slavery whilst protecting the wellbeing of those enslaved.

In FY24, the Board Risk and Sustainability Committee and Leadership Team endorsed the fourth Modern Slavery Statement, and our first report under the Canadian Act. We continued to apply a rigorous methodology to manage modern slavery risks and are working to proactively reassess the multiple tiers of suppliers that form the extended supply chain.

Our risk assessment process establishes the identification of modern slavery by considering country risk, product/service category risk and supply chain risk, and we collaborate with our operations to evaluate and rank suppliers as 'Low', 'Medium' or 'High-Risk'. We issue questionnaires on human rights and modern slavery risks annually to those 'Medium' to 'High-Risk' suppliers identified as having potential risks with human rights, labour rights, business ethics, and policies for sustainable business operations. Assessments to date have not identified modern slavery in the operations or supply chain. In FY24, our risk assessment was coupled with consideration of salient human rights risks, expanding on our sustainability-related risks and opportunities that could affect Evolution's strategy and financial performance. They are detailed in the 2023 Modern Slavery Statement.

In FY24, we:

- Updated the Modern Slavery Self-Assessment Questionnaire (SAQ) toolkit to better evaluate the potential risk of modern slavery in business operations and their supply chains, particularly in light of the introduction of the Canadian Act.
- Had attendance by the Modern Slavery Working Group at several education sessions with external providers, e.g., the UNGC Network Australia's Australian Dialogue on Business and Human Rights, for continual learning, including increasing skills associated with the legislation amendment recommendations.
- Reassessed the structure of our Modern Slavery Working Group, to improve effectiveness, enhance diversity, clarify roles and identify key focus areas. This review will continue in FY25.
- Commenced a review of the modern slavery training package against the updated Canadian Act and our operational obligations. In FY24, 92 of our employees completed targeted mandatory modern slavery training, tailored for their roles and associated responsibilities.
- Continued to include modern slavery as a focus area in our Supplier Relationship Meetings (SRMs) with key suppliers, including discussions on risk identification and mitigation, and industry learnings.

For more information, see the 2023 Modern Slavery Statement and the Report to the Fighting Against Forced Labour and Child Labour in Supply Chains Act provided on our website.

We acknowledge our role in eradicating modern slavery and are committed to operating responsibly and upholding the highest ethical standards. We expect the same from our suppliers and partners as per our Supplier Code of Conduct.

Performance

The reporting of all human rights incidents is captured in our incident reporting protocols and Incident Management System. Audits are regularly undertaken to assess compliance against our Human Rights Performance Standard, and this is incorporated within the Assurance Program. In FY24, no incidents or violations of human rights, including the rights of Indigenous peoples, freedom of association, child labour, youth labour with exposure to high-risk work, or forced labour involving our employees were recorded during the reporting period.

We contacted 198 medium to high-risk suppliers identified in our supply chain to complete the Modern Slavery SAQ. There was a 100% reception rate and 62% completion rate by these suppliers and no actual modern slavery risks were identified in our supply chain during FY24. Two potential incidents were identified and investigated during FY24, with no further action required.

While no actual instances of modern slavery were identified, we regularly engage suppliers to review their current business practices and encourage their robust governance to identify, investigate and remedy their risks of modern slavery. We continue to monitor and assess those suppliers identified as high-risk to ensure they understand our commitment towards sustainable procurement practices across our supply chain.

As in previous years, in FY24, feedback was sought from ACSI, who acknowledged progress and improved disclosures, with suggested areas for further enhancement. These focus areas included gaining deeper visibility into our Tier 2 and beyond supply chains, detailing further outcomes from our risk assessment processes, addressing higher-risk supply chains, and connecting to worker voice through supply chains. These have been prioritised as we continue to mature in our approach to addressing and mitigating modern slavery risks.

We remain committed to engaging with our internal and external partners, such as ACSI and other suppliers through our SRMs, to gain feedback and facilitate continuous improvement, including in our reporting, risk mitigation, process, measurement, and assessment.

Local and regional procurement

Management approach

Procuring goods and services from local and regional suppliers promotes economic development and associated benefits in the communities in which we operate. We monitor and report direct procurement spend (paid by Evolution) and indirect spend (paid by subcontractors to Evolution). Our approach as both employer and resident in our local communities is underpinned by local procurement decisions and processes to bring about significant positive impacts to local economies.

Local and regional procurement practices focus on:

- Promoting an open and shared culture across all our workplaces;
- Providing ongoing training and education;
- Upholding equal opportunities, diversity and anti-discriminatory practices;
- Hiring employees, contractors and suppliers from the local community; and
- Engaging with local communities, including key contractors, in various forums to discuss subcontracting, supply and employment opportunities.

Performance

In FY24, $419 million was spent directly with local and regional suppliers, including $353 million with local suppliers, a 54% increase compared to FY23. The increase can be attributable to the embedding of local, regional and Indigenous procurement in our acquisition and project activities.

Case study

Major Indigenous supply contract for Castle Hill Village

Perth-based and Supply Nation-certified Indigenous business, Steve's Transportables, was awarded a $15 million contract to manufacture and deliver accommodation units for Mungari Operation's new Castle Hill Village. The contract was awarded by Rangecon, a regional WA business that is constructing the new village. The collaboration facilitated by the Group Projects team demonstrates our aim to secure sustainable Indigenous procurement opportunities throughout the mine life cycle, including major projects such as Mungari's 4.2 Project.

Steve's Transportables General Manager Duke Foley, said the contract award would make a material difference to the business of 40 team members and their local supply chain.

"As a Supply Nation registered business we endeavour to be a holistic business, constructing the units sustainably in Perth for durability and re-use. We are grateful to have been awarded this project. Rangecon has been a very loyal client that has supported Steve's Transportables through numerous projects."

Rangecon Director Nic Hicks, said, "We're proud to be able to award the work to a quality company, on behalf of Evolution."

The village is due to be completed by March 2025. We continue to explore other opportunities to expand local and Indigenous supply for the village's ancillary services.

Supply Nation works to connect 4,500 verified Indigenous businesses with more than 750 paid corporate, government and not-for-profit members across Australia. It helps drive supplier diversity to create a more inclusive economy.

Safe and engaged workforce

"Imagine if we can create an environment where people go home better than how they arrive. That's what we aspire to create – where people are healthy and safe, where they have a voice and can contribute at work, home and in the community."

Fiona Murfitt, Vice President Sustainability

Ernest Henry emergency response team member active in training

Work health, safety and wellbeing Ⓜ

Management approach

Health, safety and wellbeing has long been a core value and strategic priority for Evolution. We are committed to providing workplaces and supporting communities where our people, including contractors and business partners, are physically and psychologically safe, healthy, and well.

We adopt a holistic and iterative approach to risk management and apply principles that seek to eliminate risk where reasonably practicable, and/or within agreed risk tolerability levels. This process is supported by risk identification and assessment, ongoing review and improvements and active management and verification of critical controls to ensure they are adequate, in place and appropriately applied. We target continuous improvement in health and safety performance and reduced incident frequency to prevent the recurrence of incidents. We believe every injury is preventable, with an ambition to provide a workplace where people can thrive and contribute - where people go home better than when they arrived.

Continual improvement requires a collective effort across all levels of the organisation, supporting and recognising our own progress and that of the broader mining industry. It is the accountability of Management to provide a healthy and safe workplace and culture, supported by our workforce that must, as a condition of employment, comply with health and safety requirements, including reporting of incidents without fear of reprisal. This is supported by systems and processes, including the Sustainability and Strategic Planning Policy, and the associated Standards regarding our people and equipment.

Our workforce is actively involved in creating a safe and healthy workplace through daily communications, participation in working groups, crisis management, business and system improvement initiatives, and health and safety committees and representatives. In FY24, we continued to improve by simplifying management system modules and frameworks to mature risk management, data and records, reporting functionality, and analysis.

For example, Red Lake converted its training management system to separate compliance and competency management, enabling more effective and focused workforce training plans. The improvements enabled a two-fold increase in data integrity and analysis. Centralising performance and initiatives sheets, and using data intelligence platforms like PowerBI, reduced manual data collation and low-level analysis, and increased time spent understanding strengths and opportunities for risk-based improvement.

By continually striving to improve the health and safety of our work practices through collaboration we have a direct and positive effect on our stakeholders, all workers (employees, contractors, suppliers, business partners) and those in our communities.

Governance, risk management and assurance

A strong health, safety and wellbeing culture is supported by a structured governance process from the Board and Leadership Team to site management across the business. The Board has oversight of Sustainability performance, including specific elements of the risk management process. The Leadership Team is accountable for developing the strategy and implementing health and safety systems, and processes to deliver performance standards, with General Managers accountable for performance at each operation. Health and Safety committees at each operation support the leadership in decision-making, risk assessment, monitoring performance, and ensuring widespread sharing of health, safety, wellbeing, and environment information.

In FY24, all operations implemented Sustainability Improvement Plans which establish clear accountability for health and safety performance, detail the controls and practices for minimising hazards, and support effective planning and execution of health and safety systems aligned with the Risk Management Framework.

Worker feedback has informed regular, at a minimum monthly, reviews and updates of these plans. The FY24 plans focused on critical control management for Material and Critical risks through the review of our bowtie risk assessments and the implementation of the Critical Risk Management tool for improved verifications and data insights. Read the related case study here.

Our culture is also maintained through ongoing care and leadership, operational discipline, an engaged, competent and capable workforce who understand the risks and the associated controls most appropriate to manage them, and regular in field discussions and inspections. The following mechanisms support the capability and are expanded in the Hazard identification and mitigation section.

1 **Leadership training:**
Annual site inductions, values training and leadership essential training. Management must undertake regular field safety interactions, inspections and audits, supported by targets and plans.

2 **Daily pre-start briefings:**
Before each shift, each department reviews how the work will be done safely and reliably and incorporates incident learnings, action close outs, etc.

3 **Pre-start assessments:**
Prior to commencing specific tasks, guided by a 'Take 5' checklist, workers are required to stop and assess the job at hand to identify and control any potential hazards that may have not already been addressed.

4 **Monthly safety toolbox (and pre-start) meetings:**
Education and awareness campaigns on a range of safety topics, e.g., food safety, hand injuries, fatigue management or the safe handling of tools.

5 **Regular safety inspections:**
All equipment, tools, and PPE, are inspected at the start of each shift to ensure they are fit for purpose. Workers are expected to comply with all requirements, including not changing or tampering with any safety device.

6 **Regular communications including the Daily Flash and Report, Review and Learn sessions:**
Daily incident updates business-wide, with weekly sessions to share learnings related to incidents to prevent recurrence, supported by a two-page incident or shared learning report.

7 **Hazard and Near miss reporting:**
Proactive reporting including any near miss significant incidents provides early warning to prevent more serious incidents from occurring. All incidents must be reported including those related to potential drug and alcohol use. Random drug and alcohol testing occurs across all operations, ensuring our people are fit for work.

8 **Investigations and learning:**
Investigations, both proactive and reactive, and shared learnings are fundamental to our approach. Incidents and any failure to adhere to established obligations are investigated under a fair and just system guided by Incident and Investigation Procedures and Standards. They are thoroughly reviewed and assessed to identify the root cause and corrective actions to prevent recurrence. The more near misses and hazards reported, the better we understand the risks and appropriate mitigants. All investigation outcomes are available online and shared via the Daily Flash.

Safe and engaged workforce

Hazard identification and mitigation

Risk register

New and existing risks are actively reviewed and managed with a strong focus on Material and Critical risks that could have an impact on our strategic objectives.

Each operation is supported by a live risk register that identifies the Material, Critical, and other risks associated with its operation. Each risk is ranked according to its potential severity and is supported by the risk source and the mitigating controls required to reduce the potential severity to So Far as is Reasonably Practicable (SFAIRP).

Scheduled quarterly risk reviews are conducted at a Site Leadership Team level and a regular review of safety management across the business is undertaken at a minimum annually, or as required. All leading and lagging indicators, and progress against targets are reviewed. Additionally, all identified corrective and preventative actions related to the lagging indicators are assessed to ensure that they remain relevant and effective or if additional mitigations are required.

In FY24, the Board Risk and Sustainability Committee endorsed an updated Group Risk Register that identified Material risks informed by our business strategy and objectives, as well as internal and external risk trends. Each Material risk is accompanied by a Risk Appetite Statement, developed through collaboration of Risk Owners and relevant stakeholders, which is the amount of risk that Evolution is willing to accept or retain in order to achieve its strategic objectives and describes the Company's attitude towards risk taking. The Group Risk Appetite Statement was reviewed and updated by the Board in June 2024 to reflect the increase in exposure to copper.

The risk register sets out clear accountabilities for the relevant risk owners, risk appetite, threats, opportunities, impacts, and mitigating actions. It is reviewed at least annually by the Board, reported on monthly by Management and delivered in a format suitable for education and communication across the business. The risk register is reviewed at least annually and more frequently as triggered by the need to address any additional matters which may have been identified during a review of the performance indicators.

Incident and hazard reporting

It is mandatory for all people working on our operations to report near misses and incidents. Our focus in FY24 has continued through weekly significant incident Report, Review and Learn sessions to ensure learning and prevention is shared across all operations. Incident investigation levels escalate with potential consequence severity. 'Moderate' rated events and below are at a minimum investigated or analysed, and remedial actions identified. 'High' or 'Material' events are investigated using root cause analysis methodology. All investigations are recorded with corrective and preventative actions tracked and reported through to completion. Management or the Board may also request additional review on any incident.

Hazards must be controlled, and all workers are trained in hazard identification, mitigation and reporting. Identified hazards, including corrective and preventative actions, are entered into the safety management system that is monitored daily to track the close out of actions. Any overdue action triggers a reporting and escalation process to the relevant level of authority.

Training includes an awareness and education component to help workers understand our risk management principles, the importance of staying safe on site, the objectives of our policies and procedures along with communication of procedures and standards and the dissemination of technical knowledge.

Our Social Responsibility and Underground Mining teams at Cowal underground

Case study

Evolution Risk Revamp Project supported by new verification app (CRM)

To effectively manage Material and Critical Risks so far as reasonably practicable, a holistic Critical Control Management process has been implemented supported by the Critical Risk Management (CRM) software program. The CRM portal and associated mobile phone application provides a user-friendly tool to manage site-specific Critical risks, critical controls and verification activities, and produces real-time analysis on deficiencies which contribute to better strategic planning and improved decision-making.

Since initial adoption in May 2023, all Evolution operations have now implemented CRM. Introduction of the CRM software has included five interactive online training modules complemented by onsite coaching and mentoring.

Each operation conducted a design process to assess the verification framework which focused on the systems and processes that underpin our critical controls. This has allowed the proactive reporting, identifying and action management of identified gaps, potentially eliminating incidents.

For field verification, the focus has been on working with Manager and Supervisor verifications to allow for real-time understanding and feedback provision. Overwhelmingly, users have provided feedback that it is a user-friendly tool that supports enhanced workforce knowledge on critical control management and awareness of when a job/task is being managed well or should be paused and controls improved. In FY25, the tool will be embedded into operational in field Risk Management processes.

Training

On average, each employee received 55.5 hours of health and safety-related training in FY24. Of the 172,256 total training hours, approximately 4,000 hours were specifically regarding emergency or crisis response training. We continue to streamline the training processes, conducting analysis of training systems and the onboarding process for all. The Board also undertakes annual risk training via workshops or onsite visits. Regular health and safety meetings are held to review key hazards and risks and required safeguards such as new-worker inductions, emergency response and evacuation drills, crisis management training, and basic hazard awareness and task familiarisation. This training is complemented by communication campaigns, community sessions where appropriate, and site-specific performance improvement, capability programs and cultural initiatives.

Our approach to training and education involves building learning experiences that promote curiosity and an ongoing desire to learn. Our people develop valuable knowledge and skills by connecting ‘the why’ – a simple prompt that reveals crucial safety behaviours - with exposure to relevant and contextual information. During FY24, we progressed the format of online learning modules to be more interactive and immersive by challenging the ‘click next’ type of learning. We have seen the benefits of our more skeuomorphic situated learning environment. Training includes an awareness and education component to help workers understand our risk management principles, the importance of staying safe on site, the objectives of our policies and procedures along with communication of procedures and standards and the dissemination of technical knowledge. Any person (employees, visitors and contractors) entering an Evolution site is required to complete a site-specific induction prior to arriving on site at both the operational and Group levels, covering health, safety, environment, community, and cultural heritage specific to the location. In FY24, 4,918 site inductions were completed across all assets and Group offices, which includes permanent workers, shutdown workers and visitors. They allow operational teams to receive site-specific information, including Sustainability information, and transition to site in a more streamlined manner. It is compulsory for all employees, contractors, sub-contractors and visitors at Evolution’s operations to complete a robust health and safety induction program, with two-yearly reassessment. It provides an overview of the business, vision and values; key policies and procedures; and critical health, safety and environmental management systems.

It is mandatory for all workers to attend health and safety training relevant to their position and their operational environment, including an interactive training program on Evolution’s Risk Assessment matrix. Training packages highlight the hazards associated with their position or work area and the relevant controls in place to mitigate these risks and involve a strong practical component to increase comprehension. It is reviewed regularly to ensure that the material remains relevant, and employees and contractors are refreshed periodically.

Safe and engaged workforce

Communication

Regular sustainability-related communications that include health and safety bulletins and notices are displayed on noticeboards, circulated amongst the mail groups and discussed in the pre-shift meetings, and shared with communities where appropriate. The content of these notices includes topics such as updates or amendments to policies or procedures, serious injuries or incidents and the controls implemented to prevent a recurrence, and a monthly update on Sustainability including safety against performance indicators.

The Daily Flash is also posted including updates on any incidents for the last 24 hours and a summary of the month's performance. It is also used to share investigation findings once released as well as other important Sustainability information, including health and safety matters such as industry alerts, monthly performance reports, general communications, and shared learnings. These reports are retained and stored on the intranet to ensure all workers have full access to this information.

Performance

In FY24 we continued to build on our proactive learning culture among our people, focused on strengthening the understanding of the Material and Critical risk controls that maintain health and safety in the workplace. Each operation implemented initiatives to help reduce the risk of incidents and to minimise the potential of injuries and illness. Performance varied across the operations and tailored programs and improvement plans were designed to address the specific needs of each operation. These were measured and tracked with focus on leadership, in field interactions, behaviours, critical and material actions, and identification of hazards. There has been ongoing review of material actions to ensure these are 100% closed out. This is reviewed weekly, reported on monthly and independently verified.

Our performance is measured using a combination of lead and lagging indicators, with performance targets established during the annual business planning cycle. A primary lagging indicator used is the TRIF. TRIF is a company KPI and achievement of our annual safety targets are key metrics included in remuneration packages for employees and executives.

Other lagging indicators include LTIF and the Injury Severity Rate which looks at the average of lost time days compared across all incidents that resulted in lost time injuries. All frequencies are calculated based on a 1,000,000 work-hours formula aligned with OSHA principles.

Leading indicators are measured and reported monthly, including proactive reporting ratios, training compliance rates, field interactions, investigation closure data and action close out data.

In FY24, there were no work-related fatalities or permanent disabilities. There were mixed levels of improvement in both lead and lag indicators with a TRIF improvement of 13% to 7.69 against an adjusted FY23 baseline of 8.83 (includes Northparkes 12mma). This is the lowest since FY21. The number of exposure hours has continued to increase during this time. While the FY24 TRIF met the set target, this data includes 65 recordable injuries with 16 being lost time injuries. Any injury is one too many and we are never satisfied with our performance. We believe every injury is preventable and we will continue to seek deeper understanding of all injury cases. Our people are empowered to be acutely conscious of their own behaviours and safety of the conditions in their relevant operating environment, to ensure we collectively learn and prevent injuries together.

There was also a reduction in severity. This was supported by the lower frequency of lost time injuries, reflecting increased oversight to prevent more serious injuries, as well as increased efforts to support and return our workers to meaningful work after recovery. Improvement was also seen in leading indicators such as reporting and communication of serious incidents, including their causal factors and proactive significant incident reporting. This trend supports an improved culture of reporting and is evidence that controls are proving effective in preventing the most serious consequence. This focus on risk management was supported by the integration of the Material Risk Review process in the Assurance Program.

Since the Northparkes acquisition, there has been ongoing integration into Evolution's health and safety processes and systems. Safety interactions represent a new process for Northparkes. This, and the updated calculation of safety interactions to reduce duplication in FY24, contributed to a reduction in Evolution's total safety interactions.

We are continually learning, improving, and sharing how we create a safe and healthy workplace with an emphasis on preventing serious outcomes. We will continue to increase the use of technology and data driven insights to reduce risk and support a safe working environment.

Safety performance comparison[19]	FY24	FY23	FY22	FY21	FY20
Number of safety interactions	36,020	45,541	45,096	49,107	54,287
Number of hazards reported	24,592	28,826	24,607	13,337	13,415
Significant incidents reviewed with senior management (%)	100	100	100	100	100
Proactive significant incidents	46	42	27	38	34
TRIF[20]	7.37[21]	8.63	10.66	9.62	6.76
TRIF Target	7.56[22]	9.33	10.75	5.25	5.50
LTIF[23]	1.81[24]	2.24	2.81	2.49	2.07
Fatalities	0	0	0	0	0
Total hours worked	9,497,227	8,453,290	7,128,241	5,612,323	5,323,912

19 Safety performance includes both employees and contractors and all operations.
20 Total Recordable Injury Frequency (TRIF) is calculated as (total number of recordable injuries [including fatalities, lost time injuries, restricted work and medical treatment injuries] x 1,000,000) / total hours worked.
21 Excludes Northparkes. 7.69 including Northparkes 12mma, 7.48 including Northparkes 6mma.
22 Excluded Northparkes in FY24, similar to FY22 excluding Ernest Henry. TRIF FY23 baseline is 8.83 including Northparkes 12mma.
23 Lost Time Injury Frequency (LTIF) is calculated as (total lost time injuries x 1,000,000) / total hours worked.
24 Excludes Northparkes. 2.53 including Northparkes 6mma.

Contractor health and safety

We operate a 'one team' approach and report and review all incidents including hazards and near misses reported from all workers, including contractors. Like all employees, contractors are required to follow safe work practices, report all incidents and stop work if they are unable to control hazards or implement robust controls to safely perform the task. Where a person does not follow safe practices, work must cease until remedial actions have been taken. This may include implementing written procedures for high-risk tasks within the contractor's scope; documenting training for all personnel; conducting fit-for-purpose audits of machinery, materials, PPE and emergency equipment used by the contractor; and re-inducting their employees to Evolution's site safety requirements.

We communicate minimum expectations regarding contractor health and safety, and other environmental and social requirements as a component of the procurement process for all operations and projects. These expectations form an integral part of the signed agreements and subsequent contract reviews with each contractor or business partner. Communication is critical and includes clearly communicating and providing information on site-specific risks, and the requirements and accountability for supervision to ensure work is undertaken safely and in line with Evolution's Standards. We collaborate with our contractors to review how tasks are designed and undertaken that supports our holistic approach to health and wellbeing with all workers.

Emergency preparedness

Emergency response programs are in place at all operations and are rigorously reviewed and assessed to ensure the business is prepared to respond to an incident and/or an emergency. These risk-based plans determine foreseeable emergencies based on operational, geographical and environmental factors.

Crisis and Emergency Management Plans include stakeholder engagement and involvement throughout the emergency management cycle; prevention, preparedness, response and recovery.

They detail protocols for communicating with external stakeholders and outline the mechanisms for stakeholders to report emergencies beyond our grievance mechanisms and Whistleblower framework.

The local emergency response teams are predominantly volunteer, comprising workers with additional training in emergency protocols, procedures and safety equipment. The programs include extensive emergency drills and training in mine search and rescue scenarios, firefighting and mitigation, CPR first-aid training, hazardous material response, vertical and confined space rescue.

The accompanying response plan outlines how we respond to an emergency or crisis. It is supported by the Crisis Management Plan that outlines the roles, responsibilities and processes to be followed by the Group Crisis Management Team (CMT) in the event of a crisis, and/or the site Incident Management Team (IMT), both at an operational and a Group level.

In FY24, we continued to build the capability of our 225 Emergency Response Team (ERT) members to support operations and to assist communities through significant incidents or threatening situations. We were there to support the communities in the flood events impacting communities near our Cowal and Northparkes operations, with fires near Red Lake and other extreme weather events near our Ernest Henry and Mt Rawdon operations. Emergency response teams maintain close working relationships with community-based emergency responders and provide additional support and resources to local responders in the event of a serious offsite incident. In cases of disaster and irregular weather events such as floods and forest fires, our emergency responders are ready and prepared to assist community-based response teams to protect workers, assets and neighbours.

Emergency response and crisis management plan

Emergency response actions: to commence immediately to prevent loss of life, damage to environment or property and to minimise harm.

Level 1 response: Operations ERT action at a site level.

Level 2 response: IMT action from site and local external involvement.

Level 2.5 response: Customised grouping of Leadership Team (CMT sub-team), if required in support of a site, operations or exploration IMT level 2 activation.

Level 3 response: CMT leadership support and management.

Case study

Red Lake Operations win District Emergency Response Competition

In line with our efforts to continuously improve our emergency preparedness, the Red Lake Operations Emergency Response Team won the 2024 Red Lake District Competition. The team, comprising nine key team members across the operation, went onto represent the Red Lake district at the Provincial Championship, the first time any of the team members had the opportunity to compete at the Provincial level.

Teams in a competition and real-scenario basis were tasked with retrieving a person from a confined space and treating a diabetic with low sugars, then encouraged to use a state-of-the-art foam generator to eliminate a simulated fire, but with a challenging twist.

The team owed their success to their emergency response partners, Site Leadership Team and supervisors who enabled the coordination of the event and their training. They did a great job and represented our business with great commitment, passion and determination.

Read more case studies about how we prepare and support communities in emergencies and times of crisis: Mungari Operations partner with Shire of Coolgardie to provide relief following power outage.

Wellbeing and ways of working

A healthy and safe workforce supports engagement and reduces absenteeism. Health-related campaigns are regularly communicated to promote awareness, management, and prevention.

We aspire to create and maintain good social, psychological, and living conditions for the workforce and our communities. We pursue a preventative approach in promoting a healthy lifestyle by raising employees' awareness of their physical and mental health state. It targets prevalent health conditions in our communities including psychological wellbeing, occupational hygiene and the effects of seasonal environmental changes.

Our people are encouraged to work in ways that are innovate, agile and best suit their lifestyle. This includes working remotely in line with our flexible work playbook, ways of working charters, and feedback mechanisms.

Mental health

We take mental health seriously and consider this to be a shared responsibility between Evolution and our workforce when it comes to the workplace. During FY24, we continued to encourage our people to speak up or seek help through various channels, while monitoring trends in society, communities or our workforce. We regularly promote the importance of mental health throughout the year by:

- Supporting community events including R U OK? Day, the Lifeline Ball, Mental Health Month, Movember, STEPtember, the Push-Up Challenge; and
- Engaging doctors, psychologists and specialists to run information sessions on mental health awareness with our workforce and in our communities.

All employees and their families continue to have access to the Employee Assistance Program (EAP), which provides confidential solution-focused professional counselling and confidential support to employees with personal or work-related difficulties. Benefits of both consultation types are leveraged to support the workforce. During FY24, our people and their families accessed 333 EAP sessions which represents a 56% increase in use of the system since FY23. Evolution's annualised usage of ~4% sits below the Mining and Resources Industry level of ~5%. In FY25, we aim to increase awareness of this service with a review, relaunch and expansion of our EAP services to better cover wellbeing.

We are committed to capitalising on the benefits of an integrated care model and approach. This involves mental, physical and psychosocial health care with wellbeing initiatives, which enables assessment, treatment and management of mental health issues focused on the individual's needs.

Read more case studies about how positive behaviours in wellbeing and mental health are being embedded on site: Dallas Adams delivers moving 'Why Safety Matters' session at Ernest Henry, and Mungari supports mining for better health.

Responsible environmental stewardship

Fatigue management

We recognise the risks associated with employee and contractor fatigue and the responsibility we have in providing the necessary resources through policies, awareness, empowerment, and tools to mitigate the risks.

As part of employees' duty of care requirements, all individuals have an obligation to arrive to work in a satisfactory physical, mental and emotional state. It is regularly communicated that every employee is empowered to stop work that they consider hazardous and to report without prejudice, any issues of fatigue to their supervisor.

To ensure that the controls in place are effective, a fatigue investigation checklist is completed for all incidents potentially related to fatigue to identify improvements in fatigue management. This is supported by mandatory fatigue training undertaken as part of induction prior to arriving to any operation.

Accommodation areas are structured to ensure that welfare needs are addressed and that there is suitable rest between shifts by implementing noise and time curfews.

Transport safety

Management approach

The risk related to transport safety (road and aviation) varies based on the activities and locations of the operations, including exploration, and the local environments in which we operate. These activities include the movement of people, delivery of products or transporting goods and equipment to, from and within the site.

Minimum standards have been developed to define key requirements related to transport safety and are outlined within the Aviation and Travel, and Fixed and Mobile Equipment Standards held under the Sustainability Performance Standards. We require all workers, including contractors, to comply with these minimum standards and to maintain a Health, Safety and Environment Management Plan or similar. Vehicle Interaction and Aviation have been identified as Material risks at a Group level which require bowtie risk assessments and critical control plans to be in place. Verification activities are undertaken to verify critical controls are effective and functioning as designed.

The Sustainability Assurance Program incorporates verification against the two Standards and the Material risk program across the business. If any deviation is identified, an action plan is developed and the nonconformance is escalated to the Leadership Team.

Aviation safety

The Evolution Group Sustainability team takes a lead role in managing the risks and ensuring effective control of risks associated with the Aviation and Travel Standard, providing travel-related security, emergency recovery and management across the business. Aviation services are reviewed and approved by Group in consultation with key industry and regulatory bodies, with external specialist support engaged (including BARS), to assess specific aviation technical matters and obligations.

International SOS has been engaged to support the health, safety and security of our people as they travel internationally and domestically. Travel is registered, and people are briefed prior to departing on any medium to high-risk travel. Generally, travel is also restricted within geopolitically sensitive locations. Strict governance and sign off protocols remain in place for all overseas travel with oversight and approval required from the Leadership Team.

Vehicle safety

Our road safety approach focuses on vehicle design and condition, road design and maintenance, traffic management rules as well as driver skills and behaviour. We have pursued improvements through the Evolution Community of Practice (CoP), linked with our Chain of Responsibility (CoR) obligations, driven by a shared vision to reduce vehicle interaction risks, incidents and near misses across the business through both driver behaviour and targeting technological solutions.

Performance

100% of charter airlines in use throughout FY24 have undergone the required third-party audit, confirming compliance to regulatory and Evolution minimum standards. Evolution's due diligence is supported by the BARS Program and certification process. There were no aviation-related events in FY24.

Vehicle Collision or Rollover is a Group Material risk monitored at the operation and Group level. Robust action plans have been developed and implemented to ensure critical control verification and management, which are tracked and reported through site risk review meetings. Findings are linked to our CoP for Vehicle Safety for distribution and wider learning.

Hazardous chemicals management

Management approach

Hazardous chemicals including the use of explosives, cyanide and other dangerous goods are essential to mining and processing activities. We recognise the need to ensure hazardous chemicals are managed safely through their life cycle in accordance with risk management principles to avoid risk to human health, ecosystems, and environmental values.

The use of hazardous chemicals is regulated by relevant legislation in each jurisdiction and is subject to specific licences, approvals and is inspected routinely by the regulator. Each operation manages the hazardous chemicals life cycle in accordance with the minimum standards outlined by relevant jurisdictional requirements and Evolution's Standards. They operate in line with specific management plans and guidelines governing the safe collection, separation, storage, reuse, use of waste contractors, disposal of waste, including hazardous chemical waste, and monitoring. They reflect local legislation, regulatory requirements and site-specific procedures and obligations in environmental impact assessments. Cyanide destruction systems are adopted to reduce the concentration of cyanide discharged to the facilities. Regular assurance activities are undertaken to ensure operations meet Standards for the handling, storage and disposal of hazardous chemicals and to identify best practice learnings that are shared across the business.

Performance

In FY24, we managed hazardous chemicals risks and opportunities via:

- Cowal and Red Lake recertification as compliant against the ICMC.
- Ongoing management and engagement with the regulators on permit or licence compliance and/or non-compliance for all explosives, dangerous goods, chemicals and radiation devices.
- Chemical approval required prior to entering operations including risk assessment.
- Emergency response spill scenario training at all operations.
- Internal audit and review validated by third-party auditors.

Making Evolution a career highlight

"We want to be great at creating the Evolution experience so that working with us is a career highlight for our people; one in which they feel included, respected and inspired."

Paul Eagle, Vice President People and Culture

Mt Rawdon General Manager with the 2024 Melbourne Cup made from gold mined at Mt Rawdon

Management approach

We aspire for Evolution to be a career highlight for our people. Our long-term success is underpinned by our people being safe and healthy, feeling included, having a voice and living our values of safety, excellence, accountability and respect. As an equal opportunity employer, we do not discriminate on the grounds of gender, race, age, ethnicity, nationality, disability, sexual orientation, relationship status, religion and/or other attributes and we are committed to respecting differences.

We focus on attracting and retaining talent, monitoring and providing skills development for the future, and providing a dynamic workplace with a culture of inclusion, transparency and listening. Our policies outline the expected standards of behaviour, creating the basis for an inclusive and diverse workforce. This includes the Code of Conduct, flexible working principles, Inclusion and Diversity Policy, and a range of employee support networks including Whistleblower Policy, EAP, Manager Assistance Program (MAP) and Workplace Contact Officers.

Performance

As of 30 June 2024, we employed 3,101 Permanent, Fixed Term and Casual employees, compared to 2,729 at 30 June 2023. The increase in workforce numbers is largely attributable to the acquisition of Northparkes in December 2023. 87% of our employees chose to stay with Evolution in FY24 which is a ~4% improvement since FY23, and a strong result in a competitive labour market.

We measure employee engagement through the biannual Your Voice engagement survey which was implemented across our business in FY24 following a successful FY23 pilot. The April 2024 results indicate that 65% of our employees are engaged compared to the Qualtrics Global Average benchmark of 77%. Some results, such as Engagement levels, that were below Global benchmarking can be attributed to FY24 being the first year of the survey being implemented across Evolution, and the 'Neutral' responses of our people. This indicates we have opportunity to continue maturing our awareness and use of this still relatively new tool year-on-year. FY24 will serve as a baseline survey with results presenting clear actions across the business to increase employee engagement, particularly concentrated on career development.

Northparkes Processing team members

Gender mix participation

Female representation in our workforce in FY24 was 19% (FY23: 18%) compared to the Australian industry average of 22%. The number of females in senior leadership positions increased significantly to 22% in FY24 (FY23: 14%). Approximately 25% of the Graduate Development Program hires in the 2024 intake were females (FY23: 28%).

In June 2023, Evolution announced gender workforce participation targets aligned to the Australian Mining Industry average. We have committed to 22% of the workforce being female by the end of FY25. To meet this target, we need a material shift and have implemented targeted strategies with a focus on attraction, retention, and overcoming unconscious biases. Initiatives to increase the representation of women, particularly at senior levels include:

- Application of Evolution-wide Internal (Succession) Talent Pool processes that promote consistency, inclusivity and fairness into internal role appointments;
- Female participation in leadership programs and external mentoring programs;
- Implementing consistent inclusive recruitment processes and practices across the organisation;
- Embedding inclusion in all our leadership programs;
- A new Leader Transition Program including a bespoke coaching component for Managers; and
- Mandatory Respect@Evolution training for all new and current employees which including specific elements focusing on bullying, harassment and sexual harassment in the workplace.

We are committed to achieving higher female workforce participation rates and understand the importance of continuing to build our inclusive culture. Our short-term aim is to reach the industry average, and then apply stretch principles to see that we drive ahead for the benefit of the industry.

Indigenous participation

The focus remains on growing a pipeline of Indigenous candidates, including to leadership, and proactively identifying experienced external talent with the skillsets needed by the organisation. In FY24, Indigenous people comprised ~7% of the Evolution workforce, a slight improvement since FY23.

We focus on attracting and retaining talent, monitoring and providing skills development for the future, and providing a dynamic workplace with a culture of inclusion, transparency and listening.

Diversity and Inclusion Ⓜ

Management approach

We recognise the benefits of having an inclusive and diverse workforce, where people's experiences, perspectives and backgrounds are valued and utilised. Everyone at Evolution should feel respected, comfortable and confident to bring their best self to work every day and to grow professionally and personally.

Our people are the most significant enablers for driving business performance and success. It is our role to ensure they feel equipped, engaged and motivated to succeed. We do this by providing a safe and healthy workplace, a supportive team, strong leadership and meaningful work with career and development pathways.

We believe in equal pay for work of equal value and continue to identify and address any gender pay gap issues. In the FY24 Annual Remuneration Review, we analysed the remuneration of employees against their specific market data (Australia and Canada) addressing gender-based pay parity. We report annually to the WGEA which, for the first time in 2024, published the gender pay gaps for individual companies and utilise the opportunity to review industry peers, and identify improvements in our policies and practices. Evolution has a higher gender pay gap for total remuneration, ~18%, compared to ~14% of same sized mining companies and ~15% of all mining companies. This is driven by a relatively low number of women making up our workforce and lower representation and tenure of women at senior levels compared to men.

Performance

Inclusion and diversity continues to be a highly important focus area with identified need for improvement, with open dialogue, initiatives and visible leadership targeted to make a positive difference. This supports our values driven culture, the communities in which we operate, and our people feeling they are included and belong at Evolution. We recognise inclusion drives positive diversity, diverse backgrounds and thinking, respectful teamwork, innovative outcomes and stronger business results. In FY24, we:

- Continued to focus on achieving our gender workforce participation target through attraction and retention of females in the workforce.
- Living our Values conversations were conducted by managers once removed to check in on culture, values and inclusion. 100% of senior management completed these discussions. Overall, 61% of the conversations were completed with employees, and while below the stretch target of 100%, the quality and value shown has reinforced our ongoing commitment to this activity.
- Implemented the biannual Your Voice engagement survey, with specific questions to understand our people's perception of inclusion. The result was 61% favourable compared to a Global Average benchmark of 74%. The FY24 data provides valuable insights that will support further improvements in inclusion and diversity.
- Implemented mandatory Respect@Evolution training for all new and current employees, complementing the previous Leading Inclusion for Leaders and Inclusion Awareness for employees.
- Launched a comprehensive Employee Support Network, outlining the ways in which our people can access support as detailed in the Employee Relations section.
- Conducted annual audits of operations' inclusive practices, facilities and symbols, including a third-party audit through an employment law firm to assess our compliance with Respect@Work.
- Integrated inclusion into our suite of Leadership Development programs, including introducing a specific Leadership Transition Program to support our people moving into new leadership roles.
- Implemented specific recruitment practices including requiring a gender diverse recruitment panel and at least one female on each recruitment shortlist, where practical.
- Continued to highlight our commitment to inclusion and diversity via induction and onboarding programs.
- Continued to act on gender equality within our workforce, including the matching of superannuation payments for our people on the unpaid portion of parental leave in Australia, provision of domestic or family violence leave, and the provision of parental leave for secondary carers, as reported to WGEA.

Refer to the ESG Performance Data document for more information about Evolution's inclusion and diversity performance based on age, gender and Indigenous representation.

	As at 30 June 2024	As at 30 June 2023	As at 30 June 2022	As at 30 June 2021	Australian Industry Average 2024
Overall female representation	19%	18%	19%	20%	22%[25]
Management female representation	21%	20%	20%	17%	N/A
Non-Management female representation	19%	18%	19%	20%	N/A
Overall Indigenous representation	7%	6%	6%	7%	N/A

25 AON Mining, Infrastructure & Engineering Remuneration Report April 2024

Case study

Inclusion and Diversity project outcomes

We are committed to fostering a workplace that is inclusive and representative of our diverse communities and acknowledge we need to do more in order to materially shift our performance and meet our targets. We have learnt that our people, including our female workforce, joined Evolution for work life balance, suitable rosters and opportunities for career improvement, though retention has been challenged due to pay, flexibility and promotion opportunities. In FY24, we set targets around female participation and reinvigorated our Inclusion and Diversity Committees to address these challenges. Champions across the business remain passionate about improving this space, with some leaders recognised for their contribution in this area.

Cowal Gold Operations Open Pit Supervisor Nadine Heal was the winner of Exceptional Tradeswoman/Operator/Technician Award at the 2024 NSW Women in Mining Awards. She also won the Outstanding Tradeswoman/Operator/Technician in Australian Resources Award at the 2024 Women in Resources National Awards. Cowal Gold Operations Manager Kyal Hunter was also recognised as a finalist as an Inclusion and Diversity Champion at the 2024 NSW Women in Mining Awards. Both have played crucial roles in fostering a more inclusive and diverse workplace and Nadine has mentored women at Cowal, while significantly improving female participation in operational roles.

Ernest Henry Operations Metallurgy Supervisor Lindsey Killer was runner up in the Exceptional Young Woman in Queensland Resources category at the 2024 Queensland Resources Council/Women in Mining and Resources Queensland (WIMARQ) Awards.

Achieving our targets will require developing our people, and building capabilities and inclusion, for example through ongoing participation in mentoring programs. In 2024, we sponsored 17 of our female employees to participate in external mentoring programs through the AusIMM WIMnet Women's Mentoring Program, the QRC/WIMARQ Women in Mining and Resources Queensland (WIMARQ) Mentoring Program, and the Women in Mining WA (WIMWA) Mentoring Program.

Talent attraction, retention and employee engagement Ⓜ

We recognise that an engaged and high performing workforce is essential for the success, growth, and organisational capability of the business. Talented people are at the heart of our success, and we always aim to identify, attract and retain people who are highly skilled, and aligned with our values. We aim to develop our people by investing in their careers through a variety of internal and external development offerings, and development opportunities and plans targeted to individual needs, short and long-term career goals and aligned to business requirements.

During FY24, our Your Voice survey allowed us to measure engagement and our people's experience throughout the employee life cycle using the Qualtrics platform. The tool enables us to externally benchmark engagement, inclusion and retention against Qualtrics global, country and industry norms. The biannual survey is an important opportunity for people to provide honest feedback to our leaders on how Evolution performs across a range of key metrics including overall experience, employee engagement, intent to stay, manager effectiveness and inclusion. The insights into our culture support us to proactively manage our people and their concerns across the organisation.

Engagement and listening

The April 2024 survey had a 67% participation rate with results indicating:

65%

of our employees are engaged compared to the Qualtrics Global Average benchmark of 77%. We have implemented strategies focused on improving outcomes in FY25.

87%

feel there is a commitment to safety throughout the business, aligned with the Global benchmark, and exceeding the benchmark in supervisors demonstrating commitment to safety.

77%

feel psychologically safe and comfortable to voice their opinions, aligned with the Global benchmark.

81%

feel their supervisor genuinely cares about their wellbeing aligned with the Global benchmark.

We have identified key drivers to improve our peoples' experiences, including development of career goals supported by clear roles and purpose, ensuring confidence in senior leadership, management of change, providing honest, meaningful feedback and communication and giving recognition. In response, we have implemented a bespoke career development leadership essential program, focused on senior leadership, supported by the new Communications and Corporate Affairs team.

Attraction

In FY24, we undertook several initiatives to enhance employee attraction and recruitment and better position Evolution to achieve its growth strategy over the next three years. Initiatives included:

- Strengthening our Employee Value Proposition (EVP) including refreshed internal and external messaging focused on why people join and stay, the motivators and drivers of their experience and building a career in Evolution. A new Careers Website was launched to inspire and connect people to our EVP.
- Consolidating the reporting of recruitment statistics with enhanced and accessible recruitment dashboards enabling dynamic analysis and decision-making.
- Streamlining and more consistent onboarding and exit surveys, enabling increased data collation and deeper insights into our peoples' motivators and experience at Evolution, improvement opportunities in onboarding and mitigating controls to prevent people leaving.

Retention rate

Strong levels of retention have been maintained across the workforce in a highly contested and competitive market with 87% of people choosing to stay with Evolution in FY24 (FY23: 83%). This reflects the targeted work undertaken to attract and retain quality people to and within the business. We continue to provide an environment where employees want to do their best work, learn, develop and experience a highlight of their career.

Recognising and rewarding our people

We have built a culture where our people 'Act Like an Owner' (ALO) by treating Evolution as if it is their own business. In FY24, 68 Group-approved ALO initiatives were generated that delivered significant value for the business through change, improved safety, innovation, cost reductions and efficiency gains.

We are in our tenth year of offering all eligible Australian - based employees $1,000 worth of Evolution shares, through the employee share offering program, enabling our employees to be owners of the business.

All our people participate in annual performance and career development reviews, and bonus review, aimed at recognising and rewarding their on-the-job performance in alignment with organisational objectives and values, and their wider efforts. In addition, our rewards include a generous Long Term Incentive Program with a three-year vesting period in which all Superintendents and above are eligible to participate.

Training and education

Extensive training is provided to increase or improve skills and knowledge that mitigate the risk of health and safety incidents, meet compliance requirements, and increase employees' understanding of their responsibilities towards the environment and our communities. The annual performance review also covers training and development needs and goals.

In FY24, the continued focus on development, leadership and retention was measured through:

- 65% of people fulfilling their stated development goals;
- Continuity in our leadership pipeline effectively retaining and attracting top talent in the Management group;
- 342 of our leaders participating in dedicated leadership development training, five cohorts of our frontline Introduction to Leadership program, one cohort of our GOLD mid-senior leadership program;
- Introduced a bespoke Leadership Transition Program for all people transitioning into new leadership roles (Superintendent and above); and
- Delivery of a total of 240,402 training hours in FY24 (vs 167,308 in FY23): an average of 55.5 hours per employee (compared to 61.5 in FY23).

The delivery and embedding of our refreshed Leadership Development suite of programs continued; all programs are underpinned by our Leadership Behaviours, inclusion and management of change. The leadership suite includes Leadership Essentials; practical bite-sized learning for all leaders, delivered on site; and Introduction to Leadership to support frontline, new and emerging leaders build the fundamentals of being an effective leader.

The GOLD mid-senior development program was delivered, with an enhanced focus on innovation, as well as on building leaders who are values driven, resilient, agile, commercially minded, inclusive and delivery focused. FY24 also saw additional offerings to the suite of Leadership Essentials training programs.

Making Evolution a career highlight

Evolution mentors and mentees in the AusIMM WIMNet mentoring program

Graduate program

In 2024, Evolution was ranked second in the mining industry and 17th in Australia for employers of small graduate intakes by the AAGE. The rankings are determined from data collected via AAGE's annual Graduate Survey, with feedback gathered from graduates who have spent up to 12 months working with these organisations. In 2024, we hired 28 graduates (25% female), who are now providing our business with a wealth of skill, knowledge and diverse thought experience – enhancing our teams with their different perspectives and fresh thinking.

Since 2013, the two-year program has supported the growth and development of Evolution's future diverse workforce. It provides broad exposure across our operations and disciplines of our business with the purpose of developing personal, technical and commercial skills. Graduates are given the opportunity to learn on the job via a development plan personally curated to ensure they have exposure that is relevant and enables ownership. Through mobility and rotations across our operations, graduates experience unique and remote parts of Australia and Canada, connect and immerse themselves within our local communities, find mentors, get exposure to corporate operations and access to both our Site Leadership and Group Leadership teams.

Mentoring

Mentoring opportunities are offered to our employees as they enhance the mentee's personal and professional growth, which contributes to the skillsets and success at Evolution, and enables networking and relationship building across the business. Our people are provided with internal resources to initiate and sustain a mentoring relationship internally and external of Evolution. Read the related case study here.

Employee relations

Management approach

Our approach to employee relations focuses on direct two-way engagement, establishing and maintaining strong working relationships with employees and unions, being proactive in consulting on any change, and providing open forums for employees to raise concerns.

Operating in a Tier 1 jurisdiction with strict legal frameworks, especially as an ASX listed company, Evolution is at an extremely low risk of not paying employees and contractors living and minimum wages. We ensure compliance with employment law obligations and pay in accordance with enterprise agreements, minimum wages and other employment terms. We ensure competitive remuneration by comparing within the industry via the AON remuneration surveys in Australia and Mercer remuneration surveys in Canada. We recognise the right to work for fair wages in safe and healthy conditions as a fundamental human right and we ensure sites are designed to protect the safety and health of all workers.

We actively manage recruitment and seek redeployment or retraining of employees impacted by workplace changes. Where we are unable to redeploy employees, our redundancy and outplacement programs support employees with the transition. In April 2024, we transitioned our Mt Rawdon Operations to day shift only with support in place for employees to understand the change and potential impact on wellbeing, access to face-to-face counselling sessions, implementation of career conversations and opportunity for employees and contractors on site to attend outplacement sessions.

We have a range of communication and support channels available to all employees. These channels include access to: the employee's direct supervisor or manager; People and Culture representatives; regular team meetings at each operation and function; the intranet; incident reporting; EAP; Workplace Contact Officers; Mental Health First Aiders; and informal channels through Management. Formal grievance mechanisms are also in place supported by an independent 24/7 Whistleblower hotline, which have clear reporting lines to the Leadership Team and the Board.

Performance

All our employees have the right to freedom of association. This is supported by our internal policies and National Employment Standards as legislated within the Fair Work Act.

In FY24, 22% of our employees were covered by collective bargaining agreements. There were no strikes, lockouts or work stoppages of significance at our operations in FY24. Our Enterprise Agreement at Cowal, *Evolution Mining (Cowal) Enterprise Agreement 2024*, was renewed during FY24 with no disruption to the workforce. No operations have been identified as being at risk for incidents of child labour or having young workers exposed to hazardous work. We have strict proof of age requirements for our employees and contractors upon hiring that prevent anyone under the legal industrial working age from obtaining employment at any of our operation or exploration sites. Similarly, operations are not considered to be at risk for incidents of forced or compulsory labour as is referenced in our annual Modern Slavery Statement.

Non-discrimination

We are committed to providing a respectful workplace for our employees, one that is free of any form of harassment, discrimination, bullying or violence. This is a matter of priority for us, and we continue to make progress, reflecting the emphasis we place on this.

Evolution, throughout FY24, continued to work and recognise our positive duty under the December 2022 introduction of Respect@Work legislation. Our Board of Directors recognises our responsibility to manage our positive duty obligations to identify and eliminate issues of sexual harassment, sex-based discrimination and victimisation. Both the Evolution Board and Leadership Team have direct oversight over these matters to ensure we are upholding our values, policies, standards and Code of Conduct.

Our Code of Conduct and Inclusion and Diversity Policy prohibits discrimination, bullying or harassment of any kind or in any part of the employment relationship. In the event of a suspected breach of our Code of Conduct, or if concerns are raised, the People and Culture team determine the appropriate course of action to ensure we resolve and implement corrective actions aligned to our policies, relevant legislative requirements and our values. Evolution is committed to disclosing any breaches, including unacceptable conduct.

We are committed to providing a respectful workplace for our employees, one that is free of any form of harassment, discrimination, bullying or violence. We continue to make progress in these areas, reflecting the emphasis we place on this.

Northparkes Social Responsibility leader working within the community

Trusted partner in our communities

> "In every jurisdiction in which we operate we focus on securing regional benefits that increase local capacity and economic development in pursuit of long-term positive outcomes for all."

Barrie van der Merwe, Chief Financial Officer

Dinawan's Connection performance at the Condo SkyFest 2024

Management approach

Given that 65% of our employees live near our operations, we acknowledge the strong links and ties to the communities where we operate and live. Our ongoing success depends on maintaining the social licence to operate with our communities as they experience the most direct social, environmental and economic impacts from the business. We engage proactively with our local communities, with respect to their culture, to identify, understand, and mitigate risks, and identify opportunities for improvement to ensure long-term development and benefits catered to community needs. Engagement occurs as early as possible within the mining life cycle, including the assessment of social and economic conditions and impacts prior to settling in new areas.

Our approach is to:

- Build and maintain engaged relationships based on mutual trust, respect, understanding and free, prior and informed consent (FPIC);
- Uphold fundamental human rights;
- Protect cultural heritage and First Nation partnerships;
- Invest in meaningful community projects and sustainable development;
- Respect cultures, customs and values while engaging in open and inclusive dialogue; and
- Have a workforce and Management that creates strong local ties and community understanding.

We implement genuine and effective stakeholder engagement in a continuous, iterative process of communication and negotiation spanning the planning and project cycles. We reference the United Nations Declaration on the Rights of Indigenous Peoples by conducting our engagement with consideration for the principle of FPIC applicable to the rights of Indigenous peoples and other land-connected peoples.

Each operation is responsible for developing and implementing a Social Responsibility Plan, with strategic focus areas in Community relations, Indigenous relations and Operational excellence, reflecting our stakeholders' aspirations and operations' goals for the financial year. The plan is approved annually, Operations update Group on their Plans monthly, and ultimate accountability sits with the Chief Executive Officer and primary responsibility with the Vice President Sustainability.

Each operation has a Social Responsibility Team managing engagement with communities, pastoralists, private landowners, First Nation partners and Indigenous peoples, contractors and educational institutions, and local government for tenement applications, regulatory approvals, ongoing operations, training and employment. They are trained to conduct effective dialogue focused on maintaining trust and addressing stakeholders' issues. The operation's General Manager is responsible for engagement and investment towards outcomes in local sustainable development. They are supported by the Group Manager Indigenous Relations and Community Partnerships, and Group Sustainability function, who provides a consistent and accessible resource for our communities and supports future Indigenous employees and businesses.

Northparkes Management with community members

Key responsibilities of the team include:

- *Cultural heritage* - Working with First Nation partners to ensure ongoing identification, recognition and protection of cultural heritage, including through heritage surveys aligned with agreements and legislative guidelines to enable risk-based design to avoid areas of heritage significance.
- *Indigenous stakeholder outcomes* - Liaising with First Nation partners for equal training and employment.
- *Community engagement and investmen*t - Identifying, assessing, and implementing community investments, including SVPs, using current local tools and criteria.

During FY24, we continued to strengthen community connections by:

- Increasing our visibility and presence with town offices.
- Communicating and consulting meaningfully on projects, e.g., Cowal Open Pit Continuation, MRPH, Northparkes acquisition.
- Evaluating and furthering our relationships with non-government conservation organisations, schools to develop work experience programs, and broader community through targeted community forums on business development and employment.
- Reviewing robustness of community investment processes, ensuring there are local partnerships focused on development, resilience and capability.

Our ongoing success depends on maintaining the social licence to operate with our communities as they experience the most direct social, environmental and economic impacts from the business.

Community day site tour of the Mt Rawdon Operations

Cultural heritage and Indigenous stakeholder outcomes Ⓜ

Cultural heritage

Management approach

As the short-term custodians of the land on which we operate, we respect the rights and role of First Nation partners and Indigenous peoples and consider protection of cultural heritage as an honour and responsibility. We value our partnerships and are committed to collaborating to identify, protect and preserve Indigenous cultural heritage, and to promoting our First Nation partners and Indigenous peoples' history, culture, and outcomes.

Our Sustainability Principles reflect Evolution's prioritised UNSDGs and include focus on 'Advancing the outcomes for Indigenous peoples and protecting their cultural heritage'. We operate in accordance with this Principle and Social Responsibility Performance Standards to guide our responsible engagement in line with FPIC, and meet performance requirements related to planning, performance, communication, integration of community input, periodic assurance and monitoring, reporting and review. As per the Standards, we apply formal procedures, processes, and grievance mechanisms related to Indigenous community engagement, economic inclusion and cultural heritage conservation, to meet and exceed applicable legislative requirements.

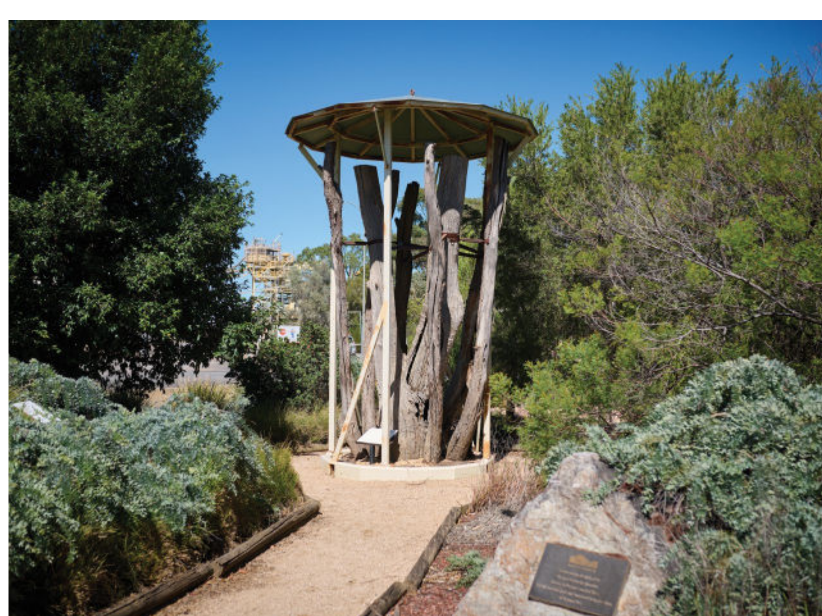
Protecting Indigenous and historical cultural heritage is integral in our risk management practices. Prior to any development, we conduct archaeological and ethnographic assessments, due diligence and surveys to ensure Traditional Owners are identified and cultural and heritage rights are protected. Where there is significant archaeological and cultural heritage present in or around the operations, we maintain Cultural Heritage Management Plans (CHMPs).

The CHMPs detail procedures for avoiding disturbance to significant sites, or, if unavoidable, minimising impacts such as by appropriate relocations or excavation methods. Tangible and intangible cultural heritage uncovered during project activities are recorded, documented and submitted to the appropriate government departments. During the mine life cycle, we work closely with our First Nation partners to continuously manage risks, identify and preserve cultural heritage sites, and incorporate Traditional Knowledge studies where appropriate. Any cultural sites are identified in the impact assessments and marked on maps so that they are not destroyed or damaged by our activities. In support of this, we incorporate cultural awareness and our First Nation partners' customs and traditions in our site induction training, and support activities to promote the culture of host communities.

We maintain agreements with our First Nation partners which outline obligations in heritage protocols, employment and business opportunities, community engagement, collaborative cultural awareness training, health and education initiatives, and work ready programs. We proactively work with them to identify opportunities to collaborate.

Our FY24 Sustainability Assurance Program highlighted good alignment across all assets in understanding and implementation of the Social Responsibility Performance Standards. They provide assurance that current governance practices are adequate to ensure the protection of cultural heritage, relationships and values.

At Evolution, we recognise our role in reconciliation and responsibility to meaningfully consult, engage, and support First Nation communities to enable equitable access to employment, health, training and educational opportunities.



Identified scar tree at Northparkes within the Wiradjuri Garden

Performance

Our Environment and Social Responsibility teams liaise with First Nation partners and Indigenous peoples and oversee the relationship agreements in place. Australian and Canadian operations and exploration projects operate under Collaboration Agreements, Native Title Agreements, Cultural Heritage Agreements, Relationship Agreements, and/or Exploration Agreements. They are negotiated in good faith, fairly and equitably towards mutually beneficial outcomes and fair compensation, and ensure we work in partnership to support opportunities that promote self-determination including:

- Enabling our partners to maintain, control, protect and enhance their tangible and intangible cultural heritage, traditional knowledge and cultural expressions. For example, CHMPs prescribe all reasonable steps to be taken when undertaking operational or exploration activity with potential to uncover or disturb cultural heritage and may include provisions to promote Cultural Awareness Training.
- Supporting the improvement and sustainability of socioeconomic conditions including negotiated royalties, compensation, or consideration to employment, training and development opportunities and awareness of business opportunities within the operational footprint.
- In Canada, agreements with First Nation partners outline mutual commitments and responsibilities to engage and consult on cultural resource surveys, and identifications of culturally sensitive sites, among many other environmental provisions. The agreements provide substantive avenues for First Nations to discuss environmental matters, from the earliest stages of the projects to closure and reclamation.
- Regular engagement and review provisions to ensure the relevance and validity of the agreements in line with legislative updates, operational growth, and changes within the local community.

Each operation and project maintain documentary evidence of the status of actions, implementation and achievement against an agreed commitment. Any cultural heritage near misses or incidents must be immediately reported and investigated in line with our Standards, with findings communicated to stakeholders and the Board. Cultural heritage impacts, risks, or material changes are included in the Risk and Sustainability Committee Report as a standing report item at least three times a year.

During FY24, there were no new significant sites identified through work conducted by Evolution. Information regarding these sites is shared with the Traditional Owners, and where required in law, with the relevant government departments. Section 18 of the Aboriginal Heritage Act WA enables land users to seek consent to disturb Aboriginal sites if it is deemed such impact is unavoidable. In FY24, we sought no Section 18 clearances for Mungari, our Western Australia asset. We engaged our partners and government departments to manage the impacts of the repeal of the Aboriginal Cultural Heritage Act 2021 in Western Australia, and remain cognisant of its impacts on our relationships and agreements.

Children enjoying a local community event while caring for an emu chick

Trusted partner in our communities

Indigenous stakeholder outcomes

Management approach

We are committed to respecting and enhancing the human rights, land and resource rights, interests, concerns, traditional land uses and cultural activities of the First Nation partners and Indigenous peoples within our communities. We aim to develop strong relationships that support self-determination and aspirations, and build appropriate skills, capabilities and resources that ensure long-term success and positive outcomes for their communities.

While we have increased Indigenous employment in FY24 to 7% (FY23: 6%), we remain committed to increasing Indigenous participation year-on-year in the business through apprentice, trainee, graduate and employment programs, and through Indigenous business opportunities. This commitment is supported by our Indigenous Procurement Approach and Guideline which guide all local procurement plans and remove barriers to participation in our business. The rollout of these guiding documents has been reassessed to align with our broader Reconciliation Plan, and the implementation of FY25 Inclusion and Diversity Plans.

Performance

Land and resource rights

We actively aim to design our activities and projects to avoid the relocation/resettlement and economic displacement of potentially affected people, particularly our First Nation partners and Indigenous peoples. They are among the first and most directly impacted stakeholders in terms of culture, environment, and socioeconomic status from our operations, exploration, and other engagement. In FY24, no Indigenous peoples or vulnerable groups have been subject to voluntary or involuntary resettlement or displacement. There were no disputes relating to land use, customary rights of local communities and Indigenous peoples, or incidents of violations involving rights of Indigenous peoples.

Refer to the ESG Performance Data for activities that take place in or near areas with Indigenous peoples.

Reconciliation

At Evolution, we recognise our role in reconciliation and responsibility to meaningfully consult, engage, and support First Nation communities to enable equitable access to employment, health, training and educational opportunities.

Our vision for reconciliation is one where First Nation partners and Indigenous peoples have equal access to opportunities and resources, are treated equally in all relationships, and have their cultures and histories celebrated and respected. This vision is maintained despite the results of the 2023 Australian Voice Referendum, and Evolution aligns with the 6.2 million Australians who voted YES and are committed to better outcomes for First Nations people.

We engage and collaborate with our First Nation partners to ensure mutually beneficial outcomes and their full realisation of social, economic, and cultural rights. This is guided by our Cultural Recognition Position Statement, Indigenous Relations Approach, and Cultural Competency pathway. This engagement is facilitated by our Group and Site Social Responsibility teams and supported by Social Responsibility Plans developed with our partners, community leaders and recognised Indigenous businesses.

These plans are focused on trusting relationships and promoting the rights and outcomes of First Nation partners and Indigenous peoples, including with respect to self-determination, capacity building, lasting employment and subcontractor opportunities. They enable integrating cultural recognition and reconciliation into the business culture, and support cultural inclusion, skills and knowledge in the workforce.

In FY24, we continued to transition from Recognition to Reconciliation. Underpinning this transition is our approach in promoting Indigenous culture and building relationships based on trust and respect. We reviewed our Cultural Recognition Position Statement and conducted deep dive discussions with members of our Leadership Team on our alignment with Reconciliation Australia's framework to form a Reconciliation Plan. These discussions identified an improvement opportunity for Evolution to reflect on our risks and opportunities, timing and resourcing. It also prompted reflection on the collaboration required to enhance our governance to empower our people to be culturally aware, competent and safe, and to advance outcomes in inclusion and diversity for First Nation partners and Indigenous peoples.

As we address these risks and opportunities, we will continue to embed our Australian-focused cultural competency program, piloted in FY23. The program builds awareness of Aboriginal and Torres Strait Islander cultures, histories, rights and achievements. We are committed to increasing the cultural competency, capability, professional and personal development of our leaders and First Nation Relationship Managers, and to being an organisation that demonstrates leadership, listens, and respects our Indigenous communities.

Other activities include:

- Engaging First Nation partners, businesses, communities and schools during Australia's National Reconciliation Week and NAIDOC Week, and Canada's National Indigenous Peoples Day and National Day for Truth and Reconciliation.
- Hosting our inaugural First Nation Summit in September and October 2023. Read more below.
- Conference support, including the 2024 Australian Institute of Aboriginal and Torres Strait Islander Studies (AIATSIS) Summit and Social Impact Summit, to build skillsets, capability and networks advancing impact for First Nation partners.
- Ongoing collaboration with Indigenous joint venture partners to enable growth, capacity building, and expanded employment and procurement opportunities for their people.
- Embedding best practice cultural heritage monitoring within large-scale on-country project deliveries, and exploring other third-party providers for our operations and partners.
- Ongoing development and strengthening of Indigenous trainee, apprenticeship, and employment programs at Ernest Henry and Red Lake. Read more about Red Lake's Mikinaak MineExcell Training Program here.

Case study

Evolution holds inaugural First Nations Summit and success of the 1770 Cultural Connections Immersion Festival

We facilitated the inaugural First Nations Summit in Queensland with around 30 attendees and delegates. Our First Nations partners from across Australia and Canada came together in the spirit of connection, collaboration, knowledge sharing and capacity building.

Participants were welcomed by the Gidarjil Development Corporation and Elders in Burnett Heads, including a tour of their Training Institute, Gidji Café and Murra Wolka Indigenous Art business – projects we have been proud to partner with. Summit delegates then participated in a yarning session where they shared their unfortunately similar histories and lifelong efforts of navigating an unjust and inequitable social, political and legislative landscape to work towards recognition of culture and rights for their families and communities. Together, delegates celebrated achievements despite these challenges and trauma, including the journey to reconnecting with culture, successful partnerships, and business development opportunities.

Dr Kerry Blackman, Gidarjil, emphasised the importance of Reconciliation: "If you hold onto yesterday, you'll be held back from tomorrow." The Summit was closed out with our delegates attending the 1770 Cultural Connections Immersions Festival, celebrating culture, connection, and reconciliation, hosted by the Gidarjil Development Corporation on Gooreng Gooreng Country.

Evolution team members in attendance were privileged to hear about the resilience, determination, and leadership these groups have shown. We committed to sharing communication details, information and resources, and to continue to facilitate these connections in the future.

Read other case studies about how we have partnered to support our First Nation partners' aspirations and self-determination journeys: Success at 2024 Condo SkyFest, and National Indigenous Peoples Day recognised by Canada's Discovery team and Red Lake Operations.

Case study

Galari Agricultural Company receives more recognition

Following the launch of the Galari Agricultural Company (GAC) in 2022, the impacts and opportunities for our First Nation partners, the Wiradjuri Condobolin Corporation (WCC), continue to be realised. GAC won the Community Excellence Award at the 2023 NSW Mining HSEC Awards. Following this, industry peers such as Glencore visited the Galari farm to share industry learnings.

In addition, the Galari Pathways Forum was created, providing an opportunity to showcase to state government agencies what the WCC has created with its partners. This forum focused on the WCC's key focus areas - education, training, employment, and business development opportunities.

Evolution's Cowal Gold Operations General Manager, Joe Mammen and Evolution's Ancillary Operator, Wrench Larry attended the Galari Pathways Forum to share their insights and career pathway journey with attendees. It was a great opportunity for Wrench to share his own success story after joining the WCC in 2015, and through the forum has provided inspiration and mentorship to other local Indigenous employees and youth.

Read other case studies showcasing our efforts to increase Indigenous participation within the business: Mikinaak MineExcell Program delivers success and Northparkes engages Peak Hill Local Aboriginal Land Council to deliver local services.

Community and stakeholder engagement Ⓜ

Community engagement (including Local employment)

Management approach

We understand the responsibility of being a major community employer, partner, and neighbour. Across Australia and Canada, we employ local people, provide competitive wages and benefits, use a mix of national and local suppliers, deliver critical infrastructure such as health and education facilities to enhance living standards for generations to come, and support economies broadly through taxes, royalties, and other government payments.

We make it a priority to live among and employ our workforce from our local communities to strengthen working relationships with local communities, understand expectations, share information, resolve issues as they arise, and ensure economic benefits of employment remain in the community. Several operations require Management to live locally. Due to the Tier 1 developed regions where we operate, we have been fortunate to have the ability to source our workforce locally and to build local capability and skills to ensure they are fit for work. However, it is occasionally necessary to source specific skills, levels of experience, or technical expertise from abroad.

To engage our community effectively, and continue to encourage local employment, our operations are guided by our Social Responsibility Performance Standards and Plans. They establish processes for working collaboratively with our communities to resolve issues and opportunities, making positive contributions in the communities, maintaining regular communication mechanisms and reporting.

We have established direct and regular two-way communication with communities at all operations using a variety of forums tailored to local needs. Many maintain established community consultation committees, such as Cowal's Community Environmental Monitoring & Consultative Committee, providing a regular forum for open discussion between Evolution, community representatives and other stakeholders about the environmental management and performance of the operations.

Performance

In FY24, we had 65% local employment across our operations[26] (FY23: 73%). This decrease has been seen across all operations and is attributable to an enhanced methodology narrowing the definition of 'local'.

Social Licence to Operate score of

4.19 'High Approval'

out of 5 (up from 4.00 in FY22)

26 Includes all operations at 30 June 2024, including Northparkes.

Stakeholder Perception Survey

In FY24, we undertook our sixth biennial Stakeholder Perception Survey to gauge stakeholder sentiment within our local communities, focusing on reputation, quality of relationship and communication. It enabled us to forecast emerging community impacts and opportunities, identify areas for improvement, and ensure that stakeholder feedback informs our Social Responsibility strategies and action plans.

Deloitte, as an independent external facilitator, was engaged to undertake this survey, and leverage the findings to inform our FY24 Materiality Assessment, following a market accepted methodology. Our operations invited Core stakeholders to undertake an online survey as well as an in-depth interview. The online survey was also made available to Anonymous stakeholders. 254 stakeholders completed the online survey, and 56 stakeholders had in-depth phone interviews.

The survey reached a broad stakeholder mix, including community, education and government organisations, landholders/local residents, local businesses and suppliers, First Nation partner organisations, employees, and others. The inclusion of employees and Anonymous responses in the stakeholder mix was distinct from our previous Stakeholder Perception Surveys.

The survey returned an enhanced acceptance of our activities and overall Social Licence to Operate score of 4.19 out of 5 (up from 4.00 in FY22), retaining Evolution's 'High Approval' scoring. This range is optimal as it reflects that stakeholders support Evolution, however, will also take opportunities to provide feedback and criticism as considered healthy for building trusted partnerships. The direction of Evolution's 'Relationship' in 2024 was predominantly positive, with 41% of Core stakeholders interviewed saying our relationship is improving. Our 'Reputation' score, however, saw a decrease to 3.80 in 2024 (4.04 in FY22).

Range	Category
5.00	
	Full trust
4.30	
	High approval
3.93	
	Low approval
3.56	
	High acceptance
3.08	
	Low acceptance
2.40	
	Withdrawn
1.00	

Our improvement in Social Licence to Operate scores reflects targeted work at each operation to enhance community engagement and presence, communication channels, and address concerns flagged in 2022. It is also an indication of our improved engagement with Traditional Custodian, First Nation, or Indigenous organisations and landholders/local residents as these were underrepresented stakeholders in 2022. However, there is more work to be done with opportunity to further improve Evolution's reputation, aligning communication channels, supporting community infrastructure, and managing risks of dependency at our operations where they are on a roadmap to closure.

Community consultation

Consulting and engaging our communities as early as possible is critical for safeguarding our social licence to operate, and gaining the approvals and permits required for operations.

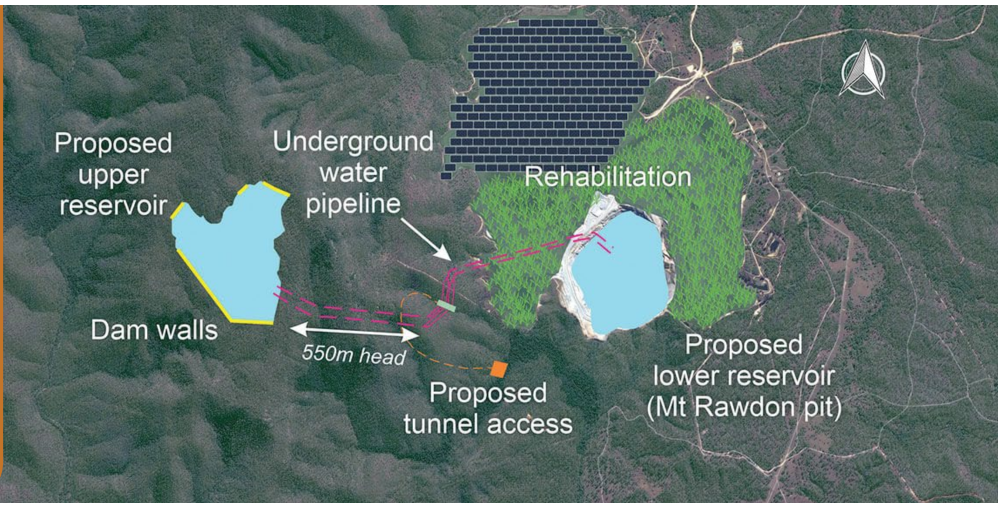
Community engagement has been integral to the progression of the Open Pit Continuation Project at our Cowal Gold Operations. The Project plans to extend the Life of Mine, enabling the ongoing employment of the open pit mining workforce and continued contributions to local and national economies. The learnings and feedback from community engagement have directly informed the development of the Environmental Impact Statement and Development Approval. These documents were submitted to the NSW Government and publicly exhibited in June and July 2023. Significant engagement and communications prior to the exhibition stage were conducted to ensure that we listened to feedback and that our communities were informed, well-equipped and capable of engaging further.

As a result, 109 community and special interest group submissions were received during the public exhibition period, including 78 local community, eight special interest groups, and 14 government agencies' submissions. We appreciated the submissions received and recognise the time and effort involved in their development. While many submissions were supportive, our teams also valued the opportunity to discuss and listen to our stakeholders' comments and address the feedback. Read more about our response here.

Case study

Mt Rawdon Pumped Hydro Project (MRPH) submits draft Environmental Impact Statement



In May 2024, in partnership with ICA Partners, we achieved a significant milestone in the MRPH and submitted the draft MRPH Environmental Impact Statement (EIS) to the Queensland Coordinator-General's office for assessment. Community, First Nations, and broader stakeholder input was invaluable in bringing together the Pre-Feasibility Study, Feasibility Study, and the EIS.

The EIS was the culmination of more than four years of planning, investigation and design with consideration for scientific, geological, engineering, economic, social, environmental and community factors, and involved collaboration with countless internal and external stakeholders.

It reaffirmed MRPH as critical to the provision of secure, reliable and clean power to central and southeast Queensland, contributing to our national and international decarbonisation commitments. It also affirmed the significant socioeconomic benefit of the project, with impacts in the form of employment, training, and regional development. The public will be afforded the opportunity to review the Project's potential impacts and submit their views to state and federal regulators before the Project can proceed and a final assessment report. Read more detail about the project in our Annual Report.

Read more about our operations and communities undergoing consultation in the ESG Performance Data.

Stakeholder engagement

Management approach

Through ongoing stakeholder engagement, we inform our strategic objectives and deliver on our obligations. Our Stakeholder Engagement Performance Standard facilitates a consistent approach to engaging with communities, First Nation partners, employees, contractors, suppliers, and other stakeholders. Each operation maintains a systematic stakeholder mapping process as per our Stakeholder Engagement Standard. At intervals, independent social impact assessments are completed to identify and prioritise stakeholder interests and needs.

All operations, exploration sites, and projects identify, prioritise and directly engage with local and Indigenous communities.

They focus on:

- Active listening to understand the potential and/or actual impact of activities on local communities and the rights of Indigenous peoples;
- Disclosing and appropriately communicating transparent, accurate and timely information;
- Maintaining an open dialogue so all parties can fully understand each other's views and concerns;
- Engaging collaboratively in decision-making on all activities and issues of mutual interest; and
- Maintaining Evolution's regulatory and social licence to operate.

The following table summarises the stakeholder groups engaged in FY24, key interests and concerns, and how we generally respond. Key stakeholder engagement updates are regularly provided to Management and the Board Risk and Sustainability Committee.

Stakeholder	How we listen	What matters	How we respond	Frequency	More info
Employees and Contractors	• Regular feedback sessions, performance reviews and personal development plans • Engagement surveys, onboarding and exit surveys, stay interviews • Living our Values conversations • Group and operation quarterly townhalls, and meetings • Communities of Practice • Employee support networks including Whistleblower Reporting, Workplace Contact Officers, EAP	• Engaged people that feel like they belong and are at their best • Fostering a values-led culture optimising performance • Safe and healthy people • Having the right tools and resources and being enabled to do their job • Receiving regular performance feedback • Career and development opportunities	• Regular daily and weekly communications • Promoting Evolution's values • Ongoing safety, health and wellbeing initiatives • Regular all staff meetings • Daily site prestart meetings/huddles • Quarterly site townhalls and updates • General Manager email updates • Fortnightly business updates from Chief Executive Officer • Formal and informal Management and Board review	Daily, weekly, monthly, quarterly, half-yearly and annually	Sustainability Report: *Making Evolution a career highlight*

Case study

Mt Rawdon gold has been used to create Lindy Lee's '*Abundance*' artwork as part of Pallion's Art Program

Around 50 kilograms of pure gold from our Mt Rawdon Operations was exclusively provided for Australian contemporary artist Lindy Lee's unique art sculpture, *Abundance*, signifying birth, death, regeneration and transcendence. Commissioned as part of the Pallion Arts Program, *Abundance* is a pure gold companion to Lindy Lee's most significant public art project to date - *Ouroboros*. This sculpture, which resides in the National Gallery of Australia's sculpture garden, is made from 13 tonnes of mirrored stainless steel and represents the traditional and eternal image of a snake eating its own tail.

The Mt Rawdon Operation is close to Lindy Lee's birthplace in Queensland and on the traditional lands of the Bailai, Gurang, Gooreng Gooreng and Taribelang Bunda peoples. This sculpture provides a perfect vehicle for storytelling for Lindy Lee and the National Gallery of Australia, reflects her sustainable design ethos by using ethical pure Australian gold, and brings visibility to one of Australia's most important industries.

Mt Rawdon team celebrates the role they played in producing the gold used to craft the 2024 Melbourne Cup

Trusted partner in our communities

Community investment

Management approach

We have an established tradition of supporting innovative, targeted local initiatives in our neighbouring communities, and supporting nationally and globally relevant programs. Our community investment framework, comprising SVPs and sponsorships and donations, aims to address specific challenges faced by our local stakeholders and catalyse long-term socioeconomic development and prosperity in local communities.

We actively engage our local stakeholders to understand local sentiments, needs, and aspirations for sustainable development, aim to strengthen local social and economic institutions, infrastructure, and build the skills, capacities and capabilities that diversify economic activity.

Where possible we seek to be consistent and supportive of local development plans, and to leverage development resources and funding available through partnership with other bodies.

The approach to community investment remains contextual and targeted for each operation, while upholding our values, Sustainability Principles, and those presented below. We recognise areas of growth in impact measurement and addressing emerging best practice and mandatory disclosures, and are focusing on implementing lessons from these projects throughout the business and beyond.

Our Community Investment program is underpinned by four guiding principles:

1 Attraction and retention

- Raise awareness and strengthen reputation of Evolution and the mining sector in broader community.
- Attract younger generation to careers with Evolution and the mining sector.
- Grow Evolution's brand as an employer of choice.

2 Build community advocacy

- Demonstrate industry relevance (now and future).
- Foster trust in mining and the gold sector.
- Touch the hearts of our local, regional and national communities.
- Grow understanding of modern mining practices.

3 Enhance outcomes for First Nation groups and ATSI[27] people

- Demonstrate our respect and accountability for any disturbance.
- Partnerships that build capacity for the future.
- Develop/support actions to help close the gap:
  - health;
  - education; and
  - employment.

4 Innovation and industry relevance

- Unlock value for Evolution and the mining sector.
- Support leading practice and new approaches in:
  - environment;
  - safety;
  - discovery;
  - operations;
  - technology; and
  - community outcomes.

Our community investment framework, comprising SVPs and sponsorships and donations, aims to address specific challenges faced by our local stakeholders and catalyse long-term socioeconomic development and prosperity in local communities.

Our Discovery team in the Vancouver Hub sponsored the Crolancia Secondary School in Pickle Lake to partner with the Mishkeegogamang First Nations in hosting Crolancia's Inaugural Powwow

27 Aboriginal and Torres Strait Islander

Performance

Direct community investment

Total direct community investment expenditures across our operations and Group office in FY24 were approximately $4.4 million, and supported the following impact areas:

We have continued to develop new, and mature existing SVPs, with FY24 highlights below. Note, in FY23 we reported expected outcomes associated with the Kalarchibold SVP, however this project was aborted in early FY24 due to project management issues.

New

1. First Nations Summit
2. Galari Agricultural Company – additional training support
3. The Hope Project – additional support
4. Project Sprouts - early intervention strategies for developmental delays in children[28]

Ongoing

1. University of Queensland's Research for COVID-19 Immune Response Using Gold
2. Galari Agricultural Company (Cowal)
3. Ernest Henry Critical Minerals Industrial Transformation Training Centre (ITTC) (reformed from University of Queensland Sustainable Transformational Reuse and Economic Alternatives for Mine Waste Study)
4. Mt Rawdon Pumped Hydro Project
5. The Hope Project (Mungari)

Cowal's Town office and community presence on Main Street, West Wyalong

28 Due to the ongoing integration at Northparkes, the initiative was not implemented directly under the SVP program, however the partnership arrangement is similar.

Trusted partner in our communities

SVPs are implemented with specific criteria to ensure sustainable impacts for our communities.

SVP	Operation	Purpose	Impact area	FY24 outcomes
Galari Agricultural Company	Cowal	Strengthening a partnership with the WCC to address significant youth unemployment within the Lachlan Region, including young Indigenous men and women.	Arts, Culture and Sport; Skills, Education and Training	• Revitalisation of the Galari Farm, 1,600 hectares. • Support for Indigenous trainees to undertake two-year Certificate of Agriculture course. • Enhanced capability of First Nation partners and Indigenous peoples in the region. • Additional investment provided for training resources. • Visits from industry peers, such as Glencore. • Formation of the Galari Pathways Forum to showcase outcomes to date.
The Hope Project	Mungari	Increase the capacity of the local Goldfields Women's Refuge and provide additional housing to women and children escaping domestic violence or at risk of homelessness.	Health and Wellbeing; Infrastructure Capability; Community Resilience	• Addresses high domestic violence mortality rates in Western Australian Goldfields, and provides safety for women, children and transgender persons. • Establishment of transitional and emergency accommodation, involving six short-stay, trauma-informed units, nearly doubling the facility's capacity. • Earthworks have been completed, modular buildings have been installed on site, and ongoing work to furnish the facilities, construct the staircase and landscaping.
First Nations Summit and 1770 Cultural Connections Immersion Festival	Group and Mt Rawdon	Bringing our First Nation partners together in the spirit of collaboration, connection and knowledge sharing, including attending the 1770 Cultural Connections Immersion Festival.	Arts, Culture and Sport	• First-of-its-kind First Nations Summit. • Around 30 attendees and delegates across Australia and Canada took a tour of the Gidarjil Development Corporation and sat with Elders in Burnett Heads, participated in a yarning session and shared their reconciliation journey, and attended the 1770 Cultural Connections Immersion Festival. • Cultural education, immersion, dancing, and engagement activities to support reconciliation at the 1770 Cultural Connections Immersions Festival. • Demonstrated commitments to listening to our First Nation Partners, and identifying opportunities to support their aspirations towards self-determination.
Project Sprouts[28]	Northparkes	Provide early intervention strategies for developmental delays in children to ensure appropriate support prior to kindergarten.	Health and Wellbeing	• Supports a Coordinator role over three years. • Screenings to identify mild or moderate developmental delays in children and assist families who require access to Allied Health therapy to get support before kindergarten. • Early intervention strategies enable the skill development children require to be ready and capable of learning when they start school.

Case study

The Parkes Frontline Services Ball, the brainchild of the Northparkes team, was recognised as a finalist in both the Australia Day awards and at the NSW Mining HSEC annual awards

Northparkes and a working party of local stakeholders established the Frontline Services Ball in 2022. The intent was to express gratitude to those in the frontline services who supported the community during COVID-19, floods and emergencies and to raise necessary funds for those services.

As of FY24, two balls have been held raising a total of more than $170,000 for local charities in the Central West, and contributing to the funding of mental health programs, much-needed emergency equipment like defibrillators, an upgrade to local PCYC facilities and more than 571 nights' accommodation at the Ronald McDonald House in Orange.

For their efforts, our Northparkes team was recognised as finalist in the local Parkes Shire Australia Day Awards for the Community Event of Year, and also as a finalist in the Community Excellence category in the 2024 NSW Mining HSEC Awards.

We congratulate Northparkes and the committee for their dedication and hard work to date. Read more case studies about how our community investment has had impacts in attraction and retention, tourism, and youth support: Guinness World Record set for gold panning at West Wyalong and Local young people participate in Youth Week in Cloncurry.

Grievances

Management approach

We have established grievance mechanisms and direct community communication lines at each project, operation and at Group through which the community, First Nation partners, and local or other stakeholders can express any concerns, issues or grievances about real or perceived actions by a project or activity. The intent of the mechanism and procedure is to ensure issues and grievances are identified, managed, investigated, and remediated in a timely and consistent manner and in accordance with relevant policies and procedures.

The procedure assists us to:

- Facilitate early resolution of grievances.
- Provide an open and responsive grievance management process.
- Enable the Social Responsibility teams to resolve grievances in a consistent and effective manner.
- Avoid issues escalating.
- Identify risks and trends to inform strategies or work plans and identify improvement opportunities.
- Meet compliance requirements.
- Integrate feedback and areas of improvement into our operations.

Performance

All concerns were documented in a transparent and accountable manner in our internal Stakeholder Management System and addressed in a timely fashion. Refer to the ESG Performance Data for the total number of grievances filed through grievance mechanisms at the operations. In FY24, all responses were closed within the required timeframe.

Responsible environmental stewardship

"We understand the critical importance of environmental stewardship and the effective mitigation of risks to manage biodiversity, cultural heritage and other environmental impacts across our footprint."

Matt O'Neill, Chief Operating Officer

Albino joey and her mother at our Mt Rawdon Operations

Management approach

Environmental stewardship is a foundational element of Evolution's Sustainability Strategy and essential to maintaining our regulatory and social licence to operate. We operate beyond legal compliance in line with the precautionary principle and Evolution's Integrated Risk Management Framework. In accordance with the Sustainability and Strategic Planning Policy and associated Standards, we incorporate environmental management, including climate change, into all areas of the business to manage risks, impacts and opportunities throughout the mine life cycle, from due diligence through to closure and economic/environmental transformation.

Mining life cycle

1

Due diligence, acquisitions and exploration

- Due diligence and acquisitions - Northparkes
- Exploration (including brownfields and greenfields) in Tier 1 jurisdictions, including Canada and Australia
- Joint ventures

2

Development

- Cowal Open Pit Continuation Project permitting
- Mungari 4.2 Project
- Ernest Henry Mine Extension Feasibility Study
- Increasing resources and reserves

3

Production

- Cowal
- Ernest Henry
- Mungari
- Mt Rawdon
- Northparkes
- Red Lake

4

Progressive rehabilitation

- Historic and ongoing progressive rehabilitation and biodiversity management across all operations
- Rehabilitation of exploration activities

5

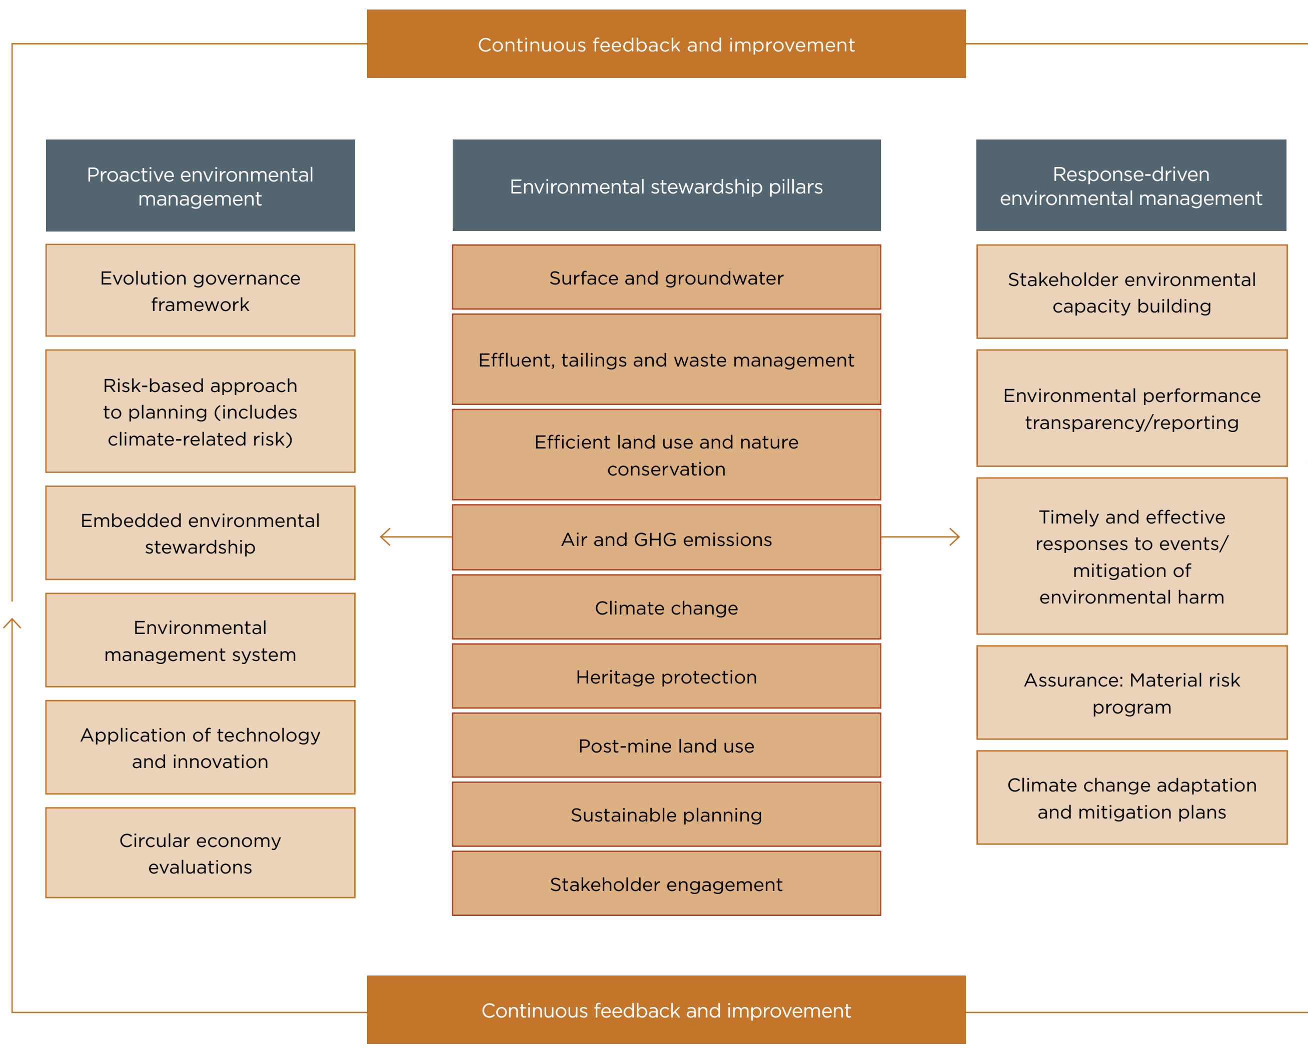
Economic/ environmental transformation (post-closure and divestment)

- Mt Rawdon detailed closure and transition planning including MRPH with energy storage (registered as a coordinated project)

We strive for safe and sustainable consumption and production to support long-term environmental outcomes.

Our strategic approach comprises proactive and consistent risk-based environmental and climate risk management, underpinned by continuous feedback and improvement.

Environmental stewardship strategic approach



During FY24, we continued to:

- Assure our environmental stewardship, with audits against our Standards and reviews against legislative obligations.
- Build internal capability and competence, in alignment with global standards and frameworks, including planning for closure at Mt Rawdon, ISO 14001 at Cowal and Northparkes and the ICMC at Cowal and Red Lake.
- Enhance planning, resilience, and mitigation against climate-related risks of extreme weather events, and water security by minimising raw water demand in processes and maximising reuse or recycling.
- Monitor surface water, groundwater, land and nature, noise, vibration and air emissions to assess effectiveness of mitigants and protect and enhance the wellbeing of the environment and community.
- Assess and implement energy efficiency and GHG emissions monitoring, forecasting and reduction initiatives, partnerships and projects.
- Progress nature-based opportunities in biodiversity stewardship and passive water treatment.
- Follow strict protocols for storage, handling, labelling and disposal of hazardous materials, including wastes to protect the workforce, communities and environment.
- Consult with stakeholders, local communities, First Nations partners and regulatory authorities on mine planning, operations and post-mine land use.

Climate Risk and Resilience Ⓜ

"We continue to make progress against our Net Zero commitment, working with government and supply chain partners to mature our approach and ensure our relevance and reputation as a responsible and climate-conscious business for the years to come."

Fiona Murfitt, Vice President Sustainability

Management approach

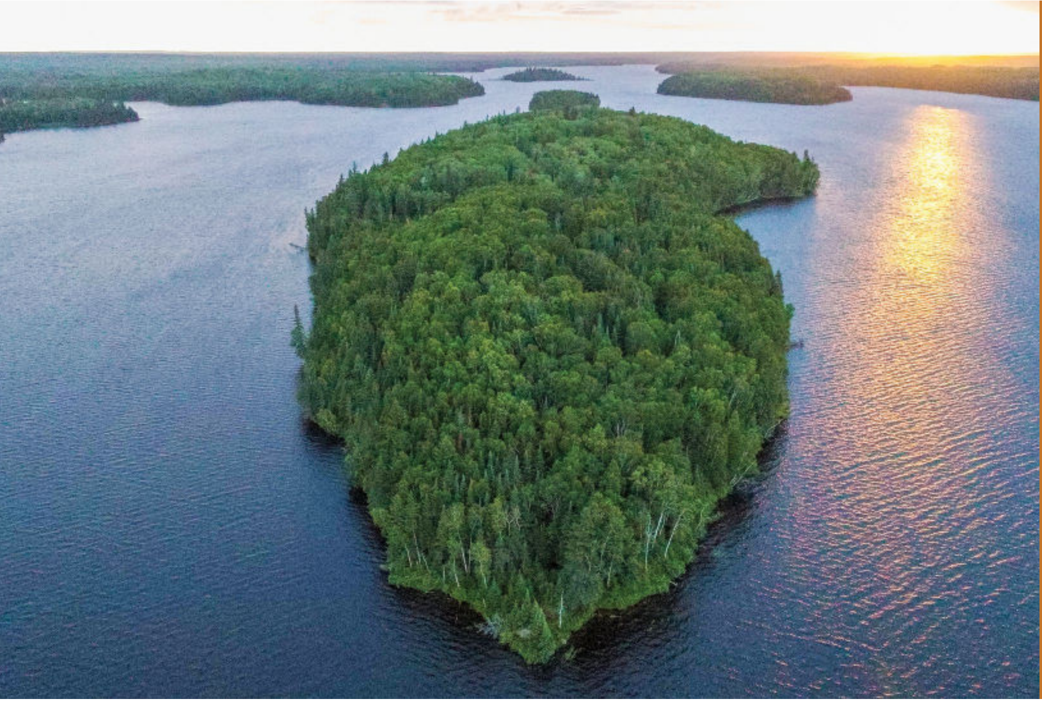
In line with the Paris Agreement, and the inherent 1.5°C and 2°C scenarios, we recognise climate change is a pressing global issue requiring serious action to ensure a clean and productive environment, a healthy and just society and positive future for our business. This risk is a material issue for our operations, supply chains, communities and stakeholders, as well as investors seeking to manage the impact to their portfolios.

Our commitment and strategic objective to manage climate-related risk was formalised prior to FY19, with the development of a Resource Efficiency and Emissions Reduction Sustainability Performance Standard. We have since released our Climate Risk Position Statement, identified and managed climate-related risks with material business impacts (as per the recommendations of TCFD and TNFD), released our Net Zero commitment, embedded our planning and strategy for emissions reduction, together with a Renewable Sourcing Strategy. In FY24, we continued to mature our understanding and management of physical and transition climate-related risks, including preparing for increased stakeholder and regulatory focus on financial disclosures.

Governance

The management of climate change is integrated into our business strategy through strong governance and risk management, throughout the mine life cycle, for ongoing opportunity identification and improvement in support of the Paris Agreement and GHG Protocols. Responding to climate change is governed at the Board level through the Risk and Sustainability Committee and the Vice President Sustainability has primary responsibility for this portfolio. In FY24, we also appointed a Chief Technical Officer and established a dedicated Long-Term Planning function. These resource decisions have provided increased capacity to support and deliver our Net Zero commitment as it matures and is integrated into our business. Robust engagement with stakeholders, including investors, policymakers, industry associations, professional experts, peers, non-government organisations and communities, also continues to shape our climate risk strategy and operational objectives.

Our Climate risk governance structure is informed by our Governance Framework and Integrated Risk Management Framework that reflects the prioritisation and integration of this risk across the business.



Robust engagement with stakeholders, including investors, policymakers, industry associations, professional experts, peers, non-government organisations and communities, also continues to shape our climate risk strategy and operational objectives.

Climate risk governance structure

Systems	Process and accountabilities	People
• Strategy and climate risk position • Risk appetites • Risk governance	**Board of Directors** **Risk and Sustainability Committee** Oversight of Evolution's Sustainability Strategy, assurance, resourcing, and performance, including climate risk **Audit Committee** **Remuneration Committee**	**Board of Directors** Oversight of Evolution's Sustainability Strategy, assurance, resourcing, and performance
• Sustainability and Strategic Planning Policy and Standards • Climate Risk Position Statement • Group Risk Register • Risk analysis and reporting	**Managing Director and Chief Executive Officer** **Responsible Leadership Team Member – Vice President Sustainability** Responsible for the Sustainability portfolio, including governance, reporting, and performance. Risk Owner for HSEC, First Nations, climate change, and water management **Chief Technical Officer** Supporting technical aspects of decarbonisation, including long-term fleet management strategy and major project opportunities	**Leadership Team and Management** The Sustainability Strategy is developed and approved by the Leadership Team and endorsed by the Board
• Operational Risk Register • Management, assurance and verification • Project assessments	**Community Of Practice (CoP)** The CoP is sponsored by the Leadership Team. It provides subject matter expertise, leadership and input into climate risk management, strategies and activities	**Group and Operations** Support the embedment of climate risk management at all levels of the business

Climate-related risks are regularly reported against targets, including Net Zero, that are established to reduce emissions, improve water security via responsible water management practices, and prepare for extreme weather and health events. Progress is reported monthly to Management and is tabled at least three times a year with the Board of Directors, in line with our Risk and Sustainability Committee reporting process. In FY24, the Board reaffirmed Climate Change as a Material business risk, and the risk treatment plan to implement and operationalise next steps for Net Zero is tracking to plan, resulting in a risk evaluation of "Well Controlled". It was also retained as a KPI in the FY24 and FY25 STIP performance measures.

Responsible environmental stewardship

Strategy

The resources sector (particularly metalliferous and critical minerals) plays a crucial role in enabling the transition towards a low-carbon economy. Guided by our Sustainability Principles and Climate Risk Position Statement, we have developed a strategy to actively manage environmental and social impacts, and conserve natural resources and socioeconomic systems, for climate-related risk management. Our strategy acknowledges climate change poses social, environmental, asset, technology, infrastructure, financial, legal and reputational risks, and has potential impacts on our business, operations, and communities through:

- Physical risks, including extreme weather, water security and supply chain impacts;
- Transitional risk with changing legislation, regulatory and societal expectations;
- The Paris Agreement and alignment to science-based climate targets and assessments;
- Community vulnerability in countries of operation and the supply chain; and
- Internal technical capability and skillsets and changing external infrastructure investment.

Our short to medium-term decarbonisation roadmap is focused on evaluating each of our operations and consolidating this information to enable strategic decarbonisation decisions from an integrated enterprise position. This ensures we have incorporated the financial and scenario-based risk implications into our decision-making.

We are optimising the energy value chain, investing in grid connected renewable energy (where possible and advantageous in our geographical locations) through partnerships, delivering operational efficiencies and planning for a transition to a low emissions fleet alternative. This is supported by a shift to low emissions fuels and fleet electrification. The transition to these sources is likely to accelerate post-2030. The opportunity to reduce emissions via our fleet will be integrated into emissions management, planning and assessment.

Our strategic value chain partnerships are key to identifying and implementing emissions reduction opportunities that are managed business-wide. Our FY24 performance outlined in this Report demonstrates this approach to decarbonisation and highlights that the intended outcomes are being realised. Assumptions connected to this strategy are detailed in the site-specific decarbonisation plans, including remaining grid connected to support the broader greening of the grid, where practicable.

Following the success of our partnerships with Sustainability Advantage and the Electric Mine Consortium, we developed a new partnership in FY24 with Caterpillar's Pathway to Sustainability program. We also identified opportunities to improve our understanding of, and partnerships with, low emissions fuel manufacturers and suppliers to assist with planning and assessing future fleet transition needs. We have also worked with partners and investors to evaluate end of mine life differently, including developing deep storage power opportunities (MRPH). Read the related case study here.

Our long-term strategy is detailed in our Net Zero commitment. It includes the investigation, trial and shift to renewables, as well as energy storage, low emissions and diesel replacement, hybrid and battery electric fleet, and nature-based solutions. Four major sources of emissions present opportunities for decarbonisation: power supply, mobile equipment, stationary combustion and process emissions. Activities that deliver cost-competitive decarbonisation reductions continue to be integrated into our business cycle.

We ensure the adaptability of our business through ongoing actions, such as including Net Zero considerations in any due diligence activity and project work, the development, execution and validation of operational decarbonisation roadmaps, operational efficiencies, knowledge sharing, and the assessment of current and future emerging technologies and consideration of commercial arrangements.

Our short to medium-term decarbonisation roadmap is focused on evaluating each of our operations and consolidating this information to enable strategic decarbonisation decisions from an integrated enterprise position. This ensures we have incorporated the financial and scenario-based risk implications into our decision-making.

Echidna enjoying the sunshine at our Cowal Gold Operations

Risk management: Risks and opportunities

Physical and transition climate risk management is embedded by Management into our day-to-day operational business processes. We also seek to enhance our understanding of our upstream and downstream impacts and stakeholders.

Risk workshops and stakeholder engagement at the Board, Management and operational levels have identified Climate Change as a Material risk to the business. This was validated in the FY24 Materiality Assessment, underpinned by a double materiality approach. All Material risks and actions to address climate change impacts across the business and value chain are documented, assessed, controlled and reported. The potential likelihood, severity and materiality of the risks and opportunities to operations and communities are proactively assessed at least annually, including forecasting. Our Climate risk management process is outlined in the accompanying diagram.

We actively manage and integrate risks and opportunities to improve efficiencies and mitigate impacts and risks. Our risk management processes assess and address site-specific exposures across the regional climatic zones, with varying vulnerabilities to both acute and chronic physical risks, extreme weather events, disasters, water and resource shortages, changes in the patterns and intensity of rainfall and storms, and changing temperatures.

This is compounded by transitional risk drivers, such as uncertain or overlapping policy, economic and market conditions, which are considered at site-specific, regional and national levels. Mitigating the dynamic nature of these risks is achieved through regularly reviewed climate risk and vulnerability assessments, the integration of climate-related risks into our strategic risk management plans and processes, and supported by active participation and engagement with industry groups, government and stakeholders.

Our climate-related risks are managed in alignment with our Sustainability and Strategic Planning Policy, Integrated Risk Management Framework and TCFD. In alignment with the TCFD Framework's Strategy and Risk Management pillars, we consider short, medium, and long-term risks[29]:

- Short-term: risks which may materialise in the current annual reporting period;
- Medium-term: risks that may materialise over a 2 to 5-year timeframe; and
- Long-term: risks which may fundamentally impact the viability of our long-term business strategy and legacy extending from 5 to 20+ years.

Climate risk management process

Risk management framework
- Clear roles, responsibilities and accountabilities
- Sustainability and Strategic Planning Policy
- Sustainability and Strategic Planning Standards
- Climate Risk Position Statement
- Risk Management Guidelines (ISO 31000) for effective and integrated risk management

Risk analysis and management
- Climate-related risks are assessed using the same approach applied to all risks assessed by the business

Reporting oversight
- Management's oversight of climate-related risks is supported by proactive reporting and effective escalation
- Decision-making is supported by connected and insightful climate risk analysis

Risk audit
- Audit (internal and third-party) for the Board to provide confidence around management of climate-related (physical and transitional) risks
- Critical controls for climate-related risks are being managed effectively
- Learning and continual improvement

In FY20, following the establishment of the TCFD-aligned Climate Risk Position Statement, we identified and assessed four Material physical climate-related risks considered most likely to impact the business over the short, medium and long-term. The risks, likelihood, magnitude and time horizons are regularly reviewed. In FY21 and FY22, extreme health impacts associated with pandemic illnesses, such as COVID-19, had short-term impacts.

Our FY24 review reaffirmed these risks are reasonably expected to impact the business over the medium to long-term, and we will continue to review upon transition to ASRS. We actively manage and mitigate the impact of these risks on our value chain segments, including management, community, inbound supply, operations, distribution, marketing and sales.

29 All time horizons (i.e., short, medium and long-term) were considered for each risk, e.g., for extreme weather events, we looked at cyclones (short-term), droughts (medium-term) and climate change (long-term). These horizons are applicable to climate-related and sustainability-related risks and opportunities.

Annual Report
Sustainability Report
Financial Report

Climate-related risks identified as Material to Evolution

Climate-related risk	Risk and impact	Mitigation
Water security	• Reduced water availability, the potential for water security implications to the business plan.	• Weather pattern monitoring and planning. • Reduce total water demand through mine design and process improvements. • Reduce raw water demand to reduce reliance on external water sources and pressure on sources that support communities and agriculture, through preferencing reuse of mine affected, hypersaline and low-quality water. • Investigate water saving and recycling technologies such as optimised processing.
Extreme weather events	• Material damage to the receiving environment, assets and infrastructure; disruptions to operations and supply chains.	• Weather pattern monitoring and planning. • Real-time stability monitoring including open cut and underground mine and tailings. • Mitigation barriers to protect sensitive receptors. • Engineered design, construction and operation of all significant infrastructure including buildings and plant. • TARPs for incoming threat of severe weather. • Critical spares management.
Energy and emissions	• Footprint/demand creep. • Developing energy regulation, market demand for sustainably produced commodities and supplier surety.	• Setting measures and targets, e.g., Net Zero, quantifying Scope 1 and 2, improving data collation for Scope 3 emissions. • Energy audits. • Emissions reduction planning, including transition to renewables. • Partnering with industry for accelerated energy efficiency and emissions evaluation. • Modelling, assessment and evaluation of emissions and carbon pricing implications across Projects, Finance, Business Development and Commercial departments. • Technology and innovation pathways. • Renewable Sourcing Strategy and supply chain partnerships, including electric drills.
Extreme health events	• Food, water and viral borne illness which could be confined to site, the community or global.	• Health and wellbeing programs and practices. • Fatigue management and onsite medical care. • Food and water standards and process. • Pandemic response plans including protection of communities, First Nation partners and Indigenous peoples. • Specialist planning, support and advice.

Our approach to Sustainability
Governance and Assurance
Safe and engaged workforce
Making Evolution a career highlight
Trusted partner in our communities
Responsible environmental stewardship

They present both risks and opportunities to our business:

Climate-related risks and opportunities

Risk and Opportunity		Description
Downside risks	Physical – Chronic	***Water security:*** • Extreme climatic events worsen with increased water stress, heavy rains, floods, droughts, sea level rises, as predicted by the climate models. Further proactive management and mitigation measures may be required to ensure operations do not experience business interruption and loss of production. • Water-related infrastructure designed for historic rainfall patterns with designs not accounting for climate scenario predictions. • Community-related infrastructure and social demands may increase as a result of increased climatic stress events. Measures will be required to provide increasing support to communities where we operate.
		Renewables infrastructure and equipment such as fleet: • Grid connected renewable energy infrastructure and low emissions fleet options may be slower to transition than planned, resulting in demand outstripping supply needs.
	Transition – Policy	***Climate change legislation, including carbon pricing:*** • In response to climate change, governments are seeking to reduce emissions from industry through the implementation of existing and emerging legislation, for example the Safeguard Mechanism. • There may be a period when increased carbon costs cannot be passed through to customers. • Uncertain and overlapping policy is adding complexity to management and costs to monitor and manage compliance and reporting. This includes mandatory disclosure obligations. • Governments may lag in the transition to renewable energy infrastructure investment, resulting in the reduction in the speed at which grid transition and security of renewable energy supply is available.

Mungari Environment team member conducting soil monitoring

Climate-related risks and opportunities

Risk and Opportunity		Description
Upside risks / Opportunities	Resource efficiency	***Operational efficiency -*** driving decarbonisation through operational efficiency will play a key role in mitigating climate change: • Energy savings in diesel consumption can be gained through activities, such as improved payload management, idle time management and logistics and haulage optimisation. • Return economic value while also reducing air pollutants emitted from construction and mining operations; generating greater income or returns for the same or lower cost than an alternative may present commercial advantage to Evolution. • Partnerships can be strengthened during trials towards an energy-efficient fleet, which also contributes to a new operational skillset.
		Water - potential for long-term climate change to impact water availability and quality: • Demonstrated efficiency in water use and management which provides enhanced reputation and/or investor ratings and new business opportunities and commercial advantage to Evolution. • System, process and design improvements including redesign of TSFs, and waste landforms to enable waste and water reuse. • Potential to deepen community partnerships to support responsible and equitable water management.
		Innovation - potential to promote faster transition to low emissions solutions through early adoption of technology, change of traditional mining methods and having a skilled and capable workforce that can adapt to changing needs: • Design, construction and investment in deep storage and alternate renewable resources adapted from existing pits and other landform infrastructure could bring alternatives to land use. • Opportunities to invest and build renewable electricity supply for our own use and connection to the grid. • Capable and skilled workforce could help the skills transition to a broader decarbonised environment. • Partnerships with energy and low emissions fuel suppliers could support with early adoption, particularly where we are grid connected.
	Markets	***Climate change legislation -*** acknowledged global and national carbon scheme trends (operations are subject to levies linked to emissions): • Further detail on short and long-term plans to decarbonise the operations by 2050, aligned with changes in technology as they arise. This includes plans to migrate to renewable energy sources and the consideration of renewable fuel, electric fleet and/or hydrogen fuel adoption. • Embedding emissions forecasting that integrates potential emissions costs into Integrated Planning, Financial, pre-feasibility and feasibility projects, and Commercial processes. • Regularly remodel proposed changes to emissions costs (or carbon pricing), including Australian Carbon Credit Units (ACCUs), in forecasting and climate scenarios.

Such risks and opportunities are regularly assessed, managed and integrated across the business to inform the monitoring, reporting and targets included in:

- Site Emergency Response Plans, including TARPs at all operations;
- Weather modelling, contingency planning, and pre-wet season planning;
- Project stakeholder engagement, plans addressing community concerns;
- Regulatory engagement, including to regional power supply planning; and
- Mine and infrastructure design, with consideration of changes over the life of mine.

Regular water level monitoring and extreme weather preparation training at Mt Rawdon and Ernest Henry exemplify our resilience to managing extreme climate-related weather events. Each operation coordinates regular emergency scenario drills in preparation for extreme weather events including inrush, fire, flood, cyclone and significant hazardous spill response.

Opportunities found in contract negotiations and emerging low-carbon and energy and fuel-efficient technologies are regularly tracked and assessed by operations and integrated into the business strategies, where appropriate. We also take opportunities to build capability and support communities, neighbours, local government and emergency services, during extreme weather events. In FY24, Ernest Henry mobilised operators and graders to install extra fire breaks to manage fast-moving grass fires, Cowal and Northparkes provided flood assistance to local communities, and Mt Rawdon donated IT equipment and provided support to the Mount Perry Rural Fire Brigade to improve virtual access to meetings and resources.

Sunrise at Cloncurry, near our Ernest Henry Operations

Responsible environmental stewardship

Metrics and targets

Energy and Emissions Ⓜ and our Net Zero commitment

Our energy and emissions management is focused on reducing our climate change impacts to meet our Net Zero commitment. In FY21, we committed to reducing our Scope 1 and 2 emissions by 30% by 2030 and to be Net Zero by 2050, in line with the Paris Agreement and scenarios therein against an FY20 baseline. The baseline data is derived from an aggregate of our operations' emissions in FY20 (adjusted). Based on guidance from the GHG Protocol, we adjust the baseline if there is a significant structural change in the business or methodology change. This threshold is set at a +/- 10% change to our baseline emissions. Consistent with this approach, our baseline has been adjusted to reflect our current portfolio of assets, which now includes Northparkes for FY24.

Our Net Zero approach considers our emissions profile and requires a practical approach to technology. Scope 2 emissions constitute around three quarters of our emissions profile, which underpins our initial strategic focus on securing renewable energy, with a preference for developing partnerships where we are grid connected. This also supports broader investment in renewable infrastructure to facilitate a sustainable Net Zero pathway. Beyond renewables, we are reviewing operational efficiencies and technology development to support our fleet transition. Emissions management and reduction strategies are integrated into every stage of the mine life cycle as we take an agile approach to leveraging partnerships and identifying opportunities aligned with our vision and purpose.

Our Net Zero approach is supported by the following pillars:

- **Emissions and data forecasting** with a split by value chain emissions.
- **Climate scenario analysis,** and management of emerging and mandatory disclosures and frameworks such as IFRS, ASRS and TNFD.
- **Emissions reduction pathways,** aligned with science-based strategies.
- **Operational emissions optimisation** through portfolio optimisation, decarbonisation projects and business case assessments.
- **Value chain partnerships,** enhancing understanding of current and future value chain emissions, developing industry partnerships and relationships accordingly.
- **Life of mine and procurement integration**, to ensure that strategies are embedded within each stage of the business cycle.
- Project development and deployment through financing, capital allocation, and operational **structures that embed emissions considerations.**
- **Internal reporting** to support employee engagement, and external reporting in alignment with ESG frameworks and industry association partnerships.
- **External assessment,** advice and review of disclosures and management to deliver regulatory compliance and best practice.

Our decarbonisation timeline has been prepared to align our Net Zero approach with our emissions profile, life of mine schedules and the practical availability of opportunities.

Decarbonisation timeline to Net Zero[30]

2030 — Ongoing operational efficiencies and electrification

As we explore and strengthen partnerships to maximise renewable and low emissions energy use at our operations, we are simultaneously optimising operational efficiency, including by setting in place trials for alternative fuels and the electrification of fleet and mining technologies.

2050 — Nature-based solutions

Hard to abate residual emissions unable to be reduced through alternative controls will be offset with assured, high-integrity nature-based solutions focused on biodiversity.

Net Zero GHG emissions

2024 | 2030 | 30% or greater GHG emissions reduction | 2040 | 2050

NOW — Strategic partnerships

The Cowal PPA secured with AGL saw the surrender of the first LGCs in FY24 and will provide the operation with 70% renewable energy by 2030. Mungari, Ernest Henry and Northparkes are working with energy infrastructure providers to maximise renewable and low emissions energy supply through strategic partnerships with local energy networks.

2040 — Technology roll out

Leverage and roll out strategic partnerships, fuel alternatives, electrification and hybrid-electric technologies to displace diesel at our operations following robust assessment and trials.

Stage 3: Biodiversity and nature-based solutions

Stage 2: Electrification of fleet and equipment

Stage 1: 100% renewables and low emission sources through energy efficiency and management, strategic energy partnerships, and grid decarbonisation

30 Builds on the conceptual pathway originally detailed in our Net Zero commitment. Application of technologies to reduce Scope 1 emissions from mine fleet is a complex decarbonisation challenge for the industry. A number of short, medium, long-term solutions are currently being assessed, trialled and considered across our operations. These include solutions that are technologically mature, such as hybrid vehicles, as well as technologies that have high potential but have limitations at present due to their practical application within Evolution operating mines and their commercial competitiveness (e.g., battery electric vehicles).

Consistent with our aim to reduce energy consumption while enhancing operational productivity, our key levers and actions in our Net Zero pathway include:

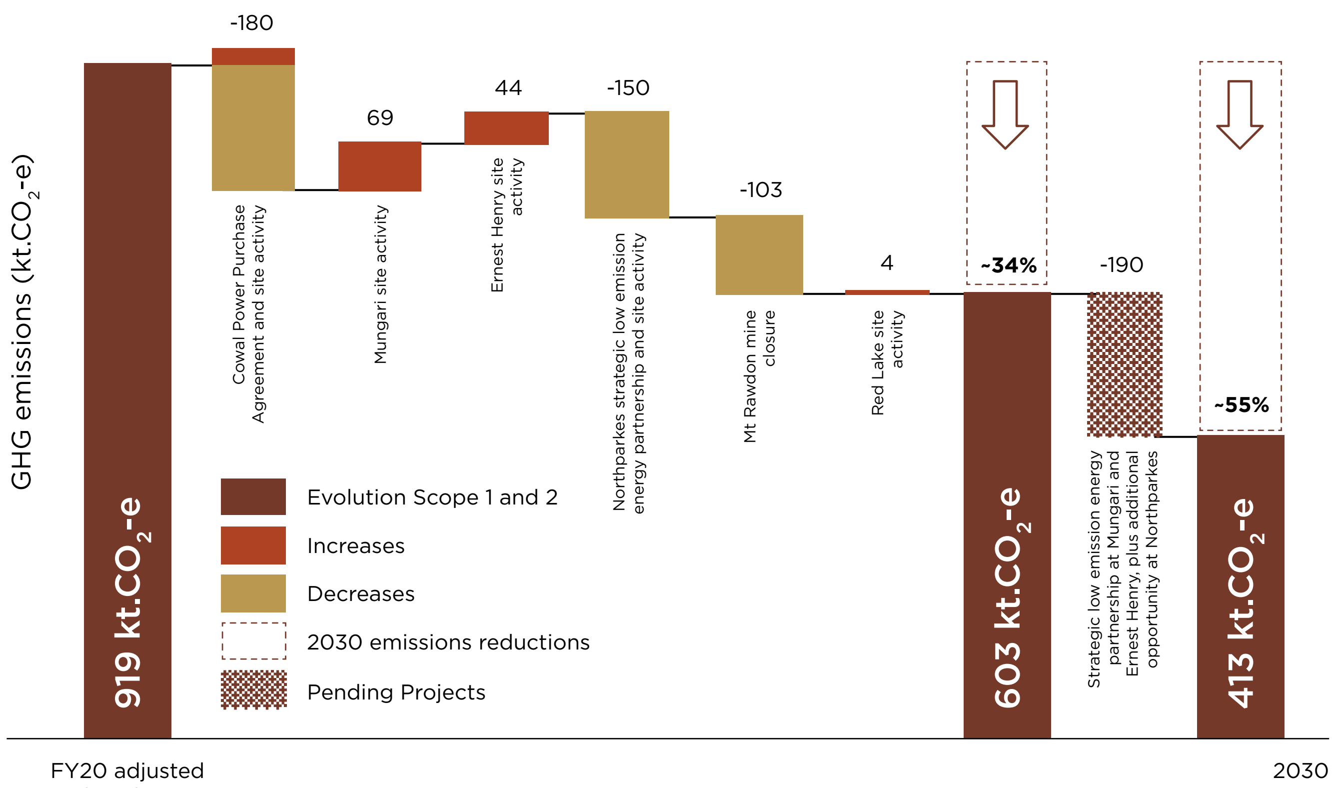
1. **Transition to 100% renewables and low emission sources, with a medium-term target of >30% renewables by 2030**
    a. Consideration of wind, solar, biofuel and green hydrogen energy sources.
    b. Assessment and exploration of new storage technologies.
    c. Development and strengthening of value chain partnerships, including capacity building, and working with industry partners to advance emissions-reduction technologies in mining.
    d. Construction of large-scale storage and renewable contribution to the grid through investment in the MRPH.
    e. Introducing energy efficiency opportunities into the value chain focused on venting, crushing and haulage.

2. **Investment in low emissions technologies focused on electrification of fleet and equipment**
    a. Transition to electric and/or low emissions fleet (hybrid equipment, battery electric vehicles (BEV) and fuel cell electric vehicles (FCEV)) or gaseous - based fleet, including consideration of electrified underground operations.
    b. Partnership with industry to investigate biofuel and green hydrogen options in addition to BEV.
    c. Continued assessment and implementation of energy efficiency opportunities and disruptive technologies, in line with mine-of-the-future design (e.g., software monitoring of grinding efficiency, adoptions of alternate/green reagents in processing).

3. **Biodiversity investment and management**
    a. Exploring and investing in innovative, verified and assured biodiversity management opportunities, including biodiversity offset creation and management, linked to TNFD.

This figure depicts the planned emissions reduction pathway to 2030, aligned with our Net Zero approach, with the base theoretical abatement potential estimated to be ~34%[31,32] and potential opportunities identified to support up to ~55%[33].

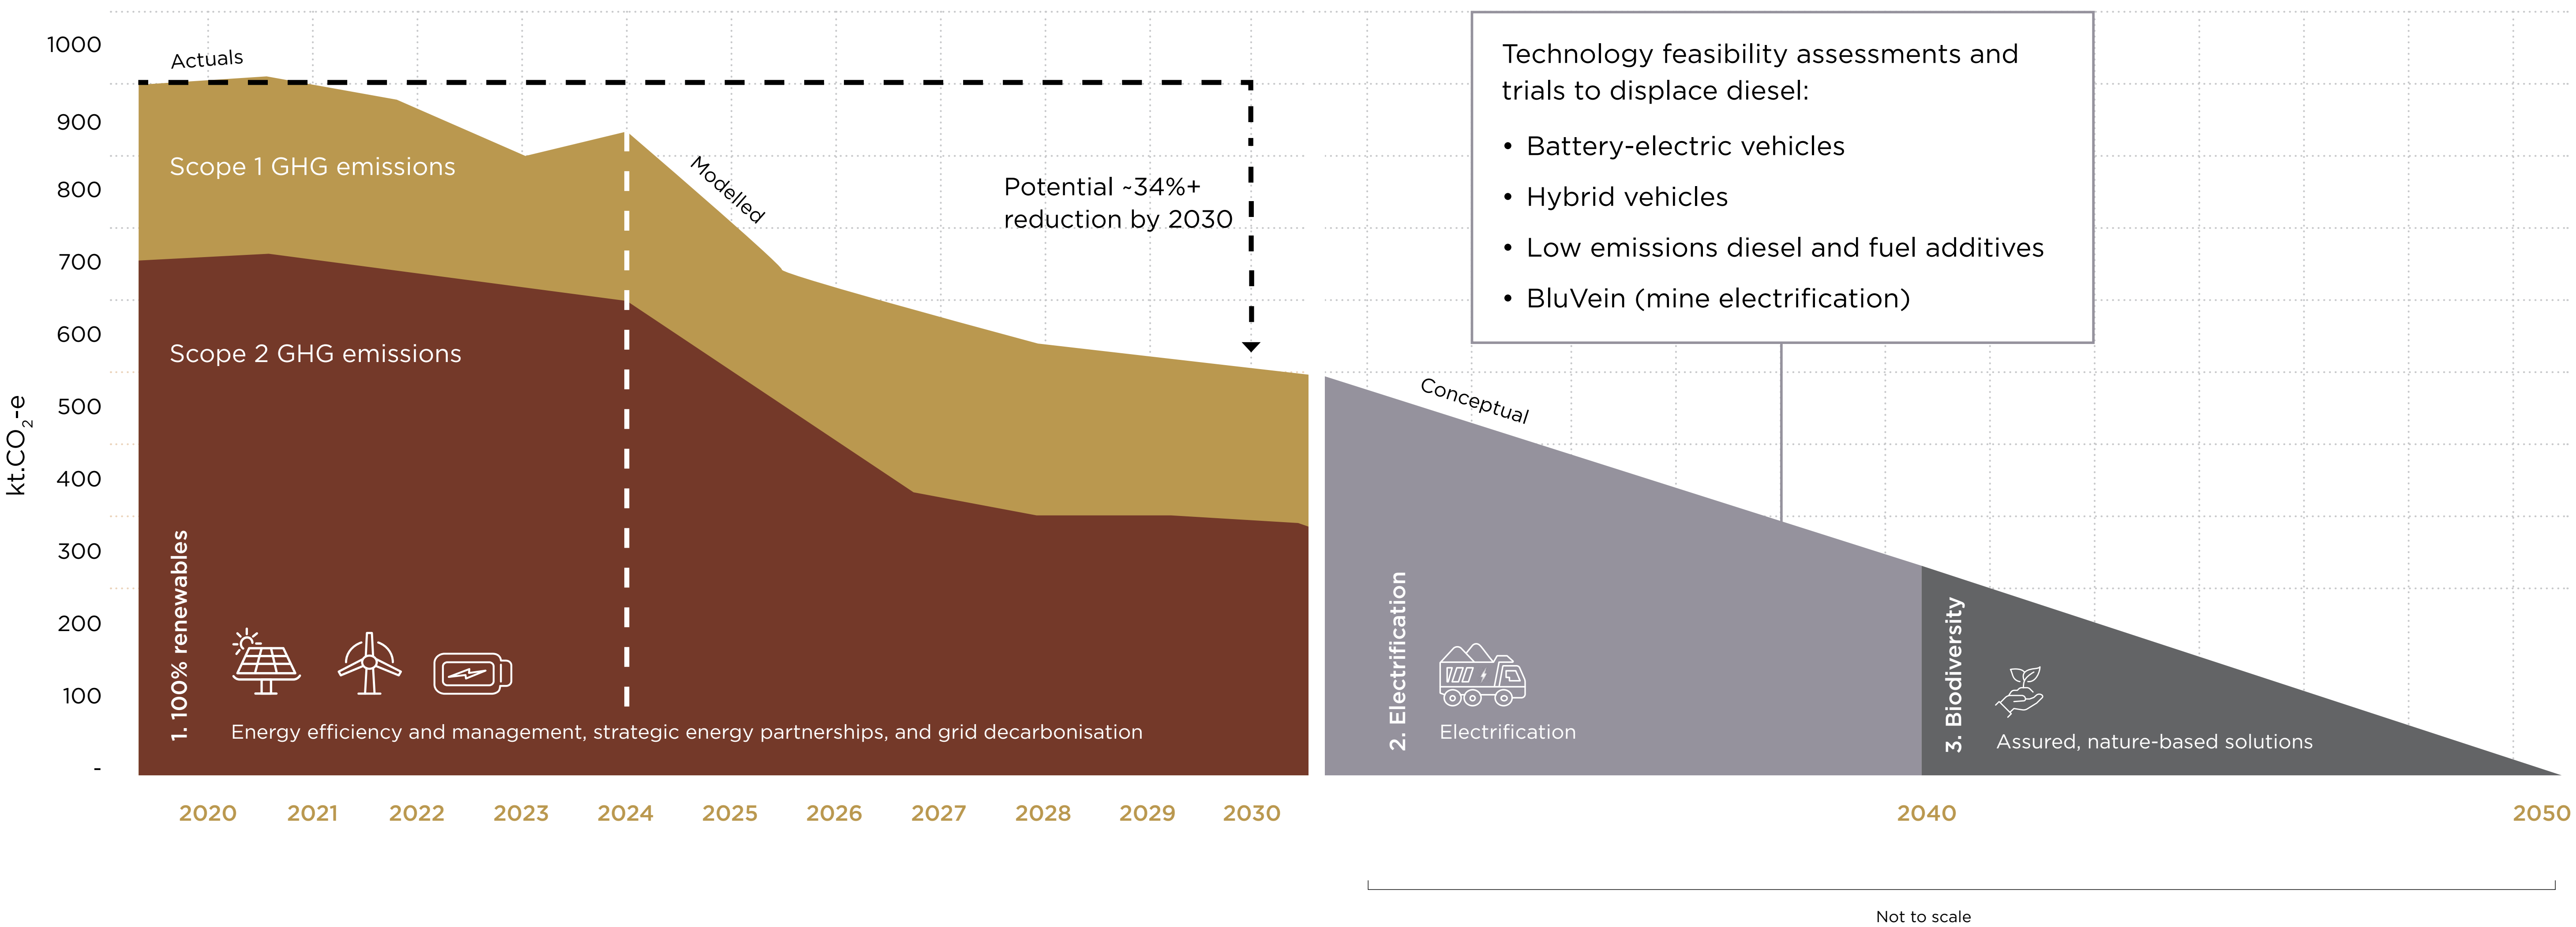
Planned emissions reduction pathway to 2030



The accompanying diagram visualises the interaction of our timeline and implementation activities, and forecasts the impacts of our emissions reduction pathway. The assumptions, uncertainties and dependencies informing this transition plan and subsequent reduction forecast are detailed in the footnote and informed by site-specific decarbonisation roadmaps and the assumptions therein. We will continue to adapt and expand this data out to 2050.

31 GHG emissions reductions include initiatives implemented since 2020 and initiatives still under consideration as part of pre-feasibility or feasibility studies. Detailed decarbonisation studies have been undertaken for Cowal, Mungari and Ernest Henry, with plans for Northparkes. Preliminary analysis indicates that decarbonisation of Northparkes power could abate more than 100 kt.CO2-e of Scope 2 GHG emissions. Forecast changes in activity at mining operations have been included in the assessment where feasibility studies have been completed and investment has been committed. This includes the expansion of Mungari and Ernest Henry. Forecast GHG emissions are subject to annual review and do not contemplate any impacts associated with the MRPH that remains under assessment.
32 The Mungari mine expansion will result in a near-term increase in emissions due to an interim reliance upon diesel to power remote assets. However, Evolution is exploring potential opportunities to avoid diesel use and mitigate associated emissions through considerations such as solar power to run the remote accommodation village, rather than diesel generators. This excludes potential impacts from future MRPH activities related to mining operations.
33 Subject to initiatives still under consideration as part of pre-feasibility or feasibility studies.

Evolution's emissions reduction forecast to Net Zero[34]



We recognise our direct and indirect contribution to GHG emissions through the value chain. Our Scope 1, 2 and 3 emissions are externally calculated, with Scope 1 and 2 included in this Report. Internally, we collate and review Scope 3 emissions, with the goal of continuous improvement in data collection, governance and assurance. Scope 3 will be disclosed following the clarification of best practice reporting expectations from the IFRS and impending ASRS regulatory obligations.

Performance: Net Zero milestones and actions

In FY21 and FY22, we established our targets and metrics to monitor and measure our performance towards our Net Zero commitment. We undertook capacity building throughout FY23 which improved our maturity, and throughout FY24 we continued to embed climate-related risks into our systems and processes in preparation for the incoming mandatory disclosure legislation obligations.

In FY24, we continued the year-on-year reduction of Scope 1 and 2 emissions reaching a ~12% reduction from our adjusted FY20 baseline. The data supporting this value has been validated by an external specialist, in line with the Australian National Greenhouse and Energy Reporting (Measurement) Determination 2008 (NGER Determination) and Regulations as well as the GHG Protocol, as part of our annual data review processes. This reduction reflects our strategy to focus on renewable energy partnerships, with the implementation of the Cowal PPA being a key contributor.

We continue to plan and implement decarbonisation actions, in line with our Net Zero commitment and approach. Our FY24 performance and decarbonisation achievements towards this goal and ongoing actions to support these productivity improvements and emissions reductions are outlined in the following progress table.

FY24 progress made towards Net Zero – integrated into everything we do

Metrics and targets	Status	Progress in FY24
Goal: 30% reduction in emissions by 2030 and Net Zero by 2050 (Scope 1 and 2)	On track	• Emissions (Scope 1 and 2) reduced by ~12%[35] from FY20 adjusted baseline. • Adjusted emissions baseline and forecast to include Northparkes and linked to Life of Mine Planning, in accordance with GHG Protocol. • Reviewed modelled Net Zero pathway, identifying Scope 2 emissions reduction opportunities for Ernest Henry, Mungari and Northparkes. • First full year of Cowal PPA implementation and first surrender of LGCs as per the Renewable Sourcing Strategy.
Decarbonisation achievements in FY24	Achieved	Key highlights: • Further developed site decarbonisation roadmaps under 1.5°C and 2°C scenarios, including marginal abatement cost curves (MACC) and integrated opportunities into mine expansion feasibility studies. • Emissions considerations and modelling consistently applied throughout Capital Expenditure Request processes, Life of Mine Planning, and due diligence processes. • Continued use of electric drill and underground battery electric vehicles at Red Lake. • Continued engagement with external parties regarding lower emissions power, fuel and equipment opportunities. • Cowal's underground vent transferred to mains power resulting in a reduction in Scope 1 emissions.

34 The Cowal PPA is committed with 70% renewables by 2030. Northparkes may engage in a comparative strategic low emission partnership and is yet to undertake a detailed decarbonisation study. Mungari is investigating partnerships with renewable energy providers. Ernest Henry is also investigating partnerships with local energy networks. The above forecast excludes potential impacts from future MRPH activities related to mining operations. Actual emission factors were used from FY20 - FY24 (source: NGAF, DCCEEW). Projections were used from FY25 - FY30 (source: Australian emission projections baseline scenario, DCCEEW). Exclusions to this note include Canada and Ernest Henry emission factors.

35 Assessed using market-based method. Update from preliminary value of ~14% reduction reported in FY24 Director's Report following inclusion of Corporate and Exploration data and completion of external verification process.

The achievement of these targets is enabled by the following pillars and actions:

Emissions and data forecasting; Life of Mine Planning

- Continued emissions forecasting based on Life of Mine Plan and monitoring progress against forecast.
- Commenced implementation of a streamlined emissions forecasting data management system with an external provider.
- Applied emissions review and modelling into business development opportunity assessments, due diligence and major project activities to assess the impact of acquisitions (e.g., Northparkes) and projects on our Net Zero performance and FY20 baseline.

Operational emissions optimisation

- Decarbonisation opportunities identified, assessed and trialled across operations.
- Chief Technical Officer position created – supporting optimisation of long-term planning, including asset optimisation.
- Energy Lead position created in Supply team - embedding energy efficiency considerations into energy and other procurement processes.
- Energy Planner employed at Red Lake, supplemented by two employees undertaking the Certified Energy Manager course.
- Battery electric drills at Red Lake, implementation of wireless natural gas meters to improve monitoring of consumption and defects and identification of replacement and maintenance strategies.

Climate scenario analysis

- Progress against TCFD reporting – currently at 100% coverage, improved from previous year.
- Implemented climate scenario analysis across projects, including Mungari 4.2 Project, Cowal OPC and Ernest Henry Mine Extension Feasibility Study – energy and emissions, extreme weather events (storms).
- Reviewed final recommendations of TNFD.

Emissions reduction pathways

- Ongoing development of operational and project decarbonisation roadmaps.
- Northparkes and Ernest Henry energy audits undertaken, and improvement opportunities and findings fed into future planning.
- Renewable Sourcing Strategy implemented.

Internal and external reporting

- Performance: emissions performance on track with Net Zero commitment.
- Preparation for mandatory disclosures through a gap analysis against ISSB's IFRS S1 and S2 climate standards and review of draft ASRS requirements.
- Commenced ASRS transition planning.

Value chain partnerships

- Member of Electric Mine Consortium: focused on carbon footprint reduction through industry innovation, shared learnings, electrification and other technologies.
- Sustainability Advantage: identifying and executing opportunities for development in Scope 1, 2, and 3 decarbonisation and climate reporting areas.
- Sustainable Procurement Framework and other partnerships focused on energy procurement (renewables and biofuels).
- Continued engagement with heavy equipment suppliers to better understand the value chain emissions map and identify suitable opportunities for partnerships to support sustainable fleet transition, e.g., Red Lake, Cowal, Northparkes.
- Access to hybrid models could theoretically reduce emissions regarding fleet by ~35%. Our fleet transition is enabled by our membership in the Caterpillar Pathways to Sustainability program and supported by other supplier relationships including our engagement and trials with Sandvik.
- Partnerships with renewable energy suppliers such as AGL with Cowal PPA and evaluating further opportunities in other regions.
- Partnerships with low emissions and additives fuel providers, government and industry partnerships to pursue renewable energy options, e.g., Critical Minerals Zone (Mt Isa) in Queensland and other working groups in Western Australia.

Performance: Emissions

Scope 1 and 2 emissions

We use a variety of standard metrics to track emissions performance, emissions intensity and energy consumption.

Our performance is tracked and aligned to financial year reporting, international standards and Australian regulations. The FY24 data reflects our current portfolio adjusted to include Northparkes for the full financial year. This is consistent with the NGER Determination reporting guidance.

For Scope 2, we apply both the location-based and market-based method, consistent with methodologies outlined in the NGER Determination and the GHG Protocol Scope 2 Guidance.

In FY24, we completed the annual NGER reporting for all Australian operations, which is prepared by an external specialist and submitted to Clean Energy Regulator. We elected not to submit using the CERT framework, instead relying on tracking and reporting progress against Net Zero targets through existing public disclosures, in line with incoming mandatory disclosure requirements. Regular capture and analysis of the energy and emissions performance[36] is conducted in alignment with our Sustainability and Strategic Planning Standards.

FY24 emissions performance against FY20 baseline

GHG emissions	FY24	FY20 (baseline)[37]	Change (%)
Total of Scope 1 and 2 (tCO_2-e) (market-based)[38]	808,020	919,167	~12
Scope 1 (tCO_2-e)	225,199	231,823	~3
Scope 2 (tCO_2-e) (market-based)[38]	582,821	687,344	~15

In FY24:

- Total Scope 1 and 2 emissions (from fuels and electricity) continued to trend downwards reaching a ~12% reduction from our adjusted FY20 baseline.
- Overall, Scope 1 emissions reduced ~3% against the adjusted FY20 baseline, predominantly driven by a 40% reduction in Scope 1 emissions at Mungari since FY20.
- Scope 2 emissions reduced by ~15% against the adjusted FY20 baseline. The primary contributions were Cowal through renewable electricity purchased via the PPA (~9% reduction) and Northparkes (~6% reduction).

In FY24, in line with our Net Zero approach to strategically focus on securing renewable energy to reduce Scope 2 emissions, more than one third of all electricity purchased across our portfolio was sourced from renewable or low emission sources. Cowal sourced almost half of its power from renewable sources, predominantly attributable to the PPA. Red Lake sourced almost 90% of its power from low emissions or renewable sources, due to the make-up of the supply grid.

Further details on FY24 emissions performance are presented in the following charts.

In FY24, in line with our Net Zero approach to strategically focus on securing renewable energy to reduce Scope 2 emissions, more than one third of all electricity purchased across our portfolio was sourced from renewable or low emission sources.

Northparkes Environment team inspecting biodiversity at a nearby farm

36 Since FY23, Evolution has applied the market-based emissions accounting approach. This approach, aligned with the GHG Protocol, provides the ability to account for emissions reductions associated with renewable energy instruments (such as the Cowal PPA), where appropriate, as well as the residual mix of grid emissions factors. In accordance with the GHG Protocol, for a multi-regional company where market-based method applies, market-based will be calculated for the portfolio for consistency. For operations within the portfolio where market-based method is not applicable (i.e., not grid connected like Ernest Henry and Red Lake) as per the GHG Protocol hierarchy location-based method is used for those facilities, as the market and location-based calculated Scope 2 emissions are the same. As per GHG Protocol, both market-based and location-based emissions are reported in our ESG Performance Data.

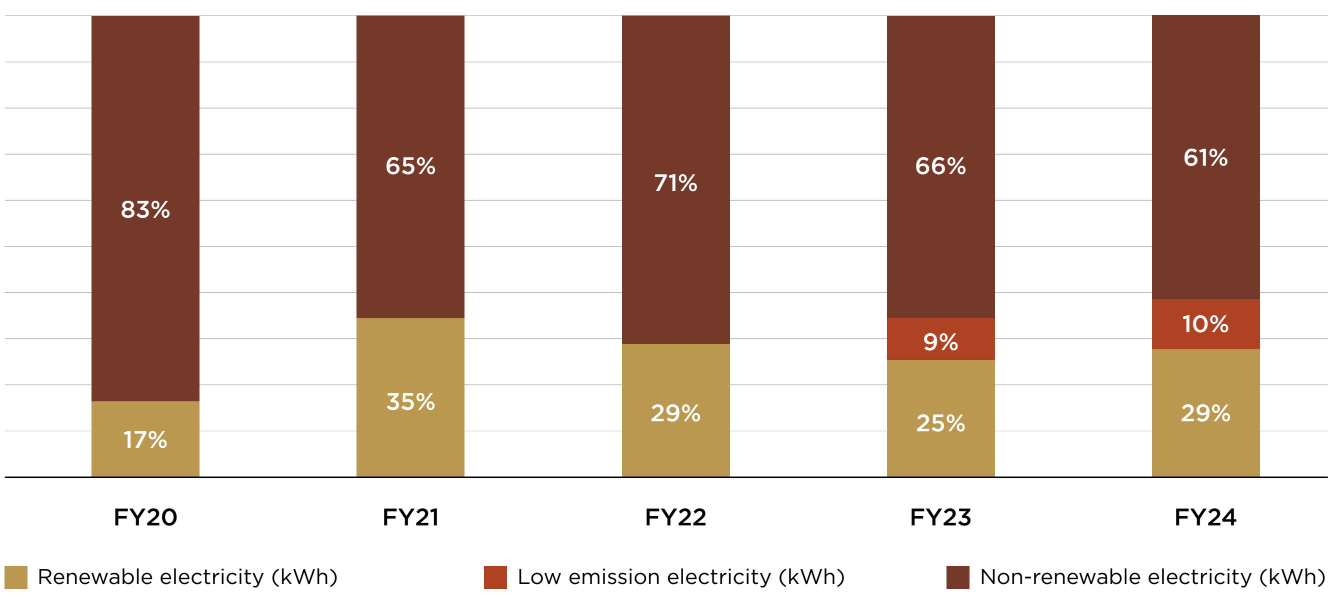
37 FY20 emissions baseline for current assets adjusted in FY24 to include the acquisition of Northparkes and validated in accordance with the GHG Protocol.

38 FY24 Scope 2 emissions are calculated using the market-based approach in alignment with the GHG Protocol. LGCs will be surrendered in January 2025 for the 2024 calendar year.

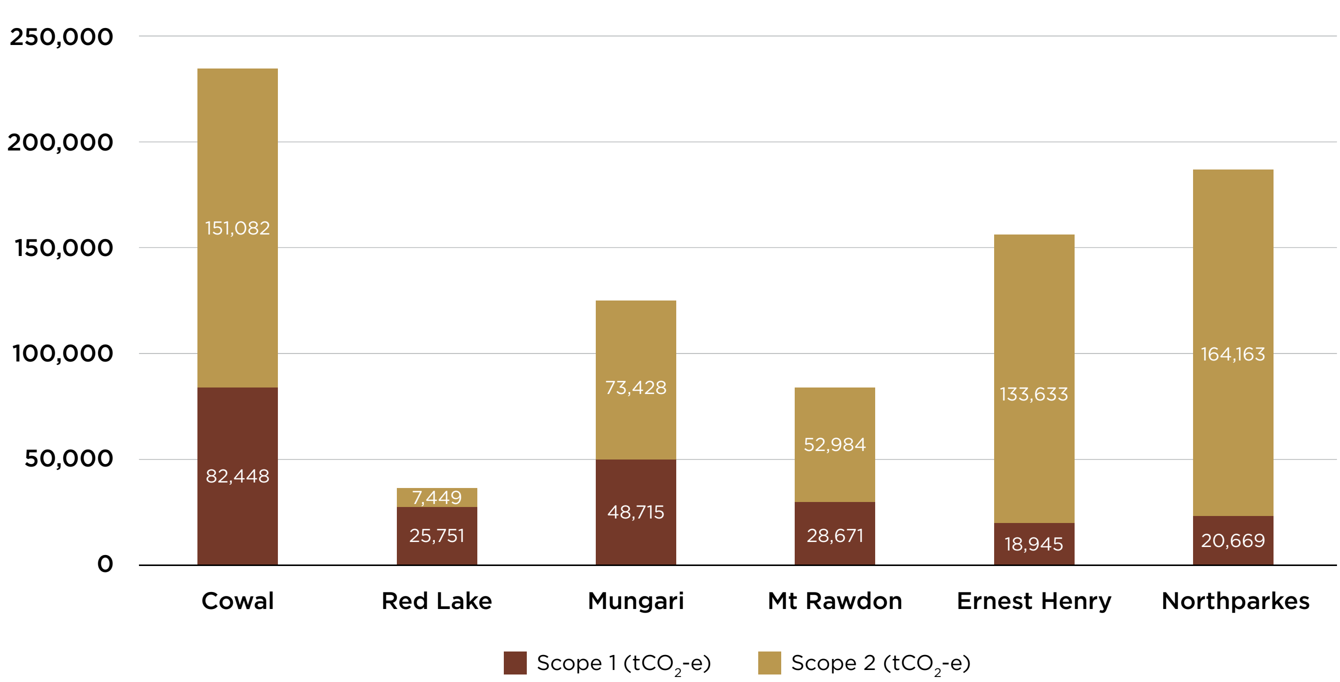
Safeguard Mechanism

We monitor the impacts of global and national emissions-limiting regulations, cap and trade and emissions schemes. Under the Australian Government's Safeguard Mechanism regulations, Cowal's Scope 1 emissions remained within the registered multi-year monitoring period threshold for the FY22-FY24 reporting period. While the Safeguard Mechanism was not triggered at any of our sites, in anticipation of future Scope 1 emissions above the threshold, Cowal applied for, and had approved, an emissions-intensity determination.

Evolution electricity consumption by category FY20 - FY24

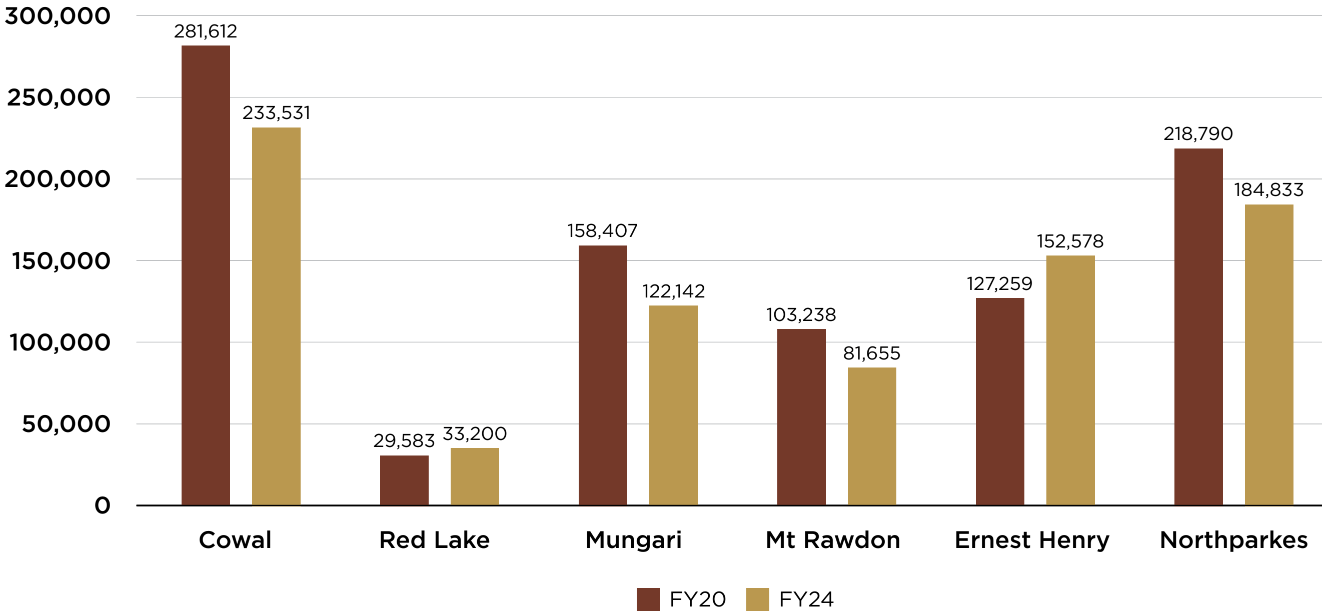


FY24 Scope 1 and 2 emissions (tCO_2-e) breakdown by operation[39]

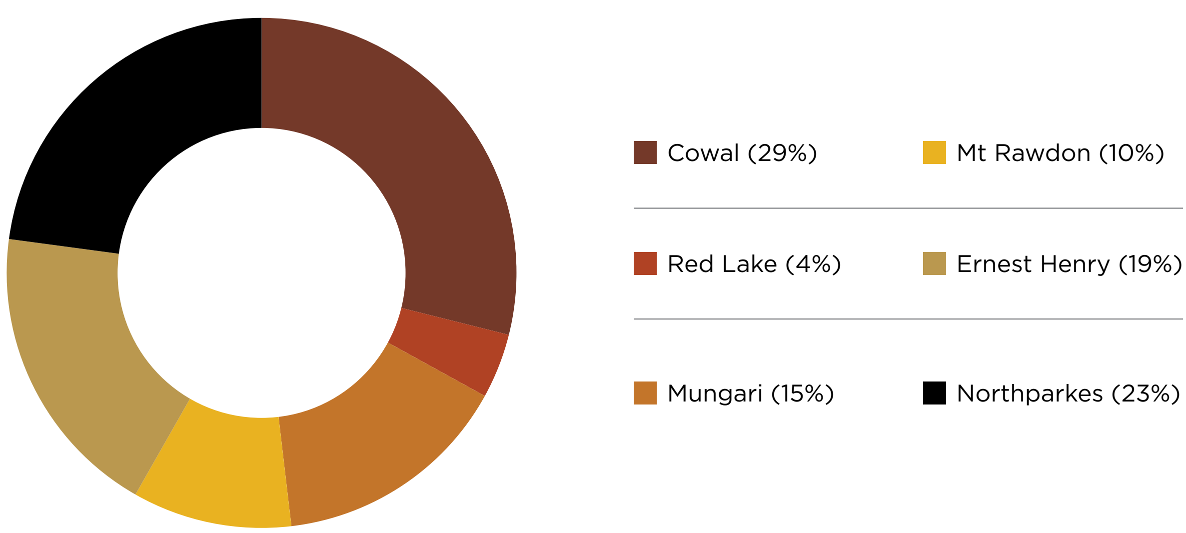


39 Data calculated utilising market-based methodology.

Total Scope 1 and 2 emissions (tCO_2-e) breakdown by operation FY20 vs FY24[40]



FY24 proportion of total Scope 1 and 2 emissions (tCO_2-e) by operation[41]



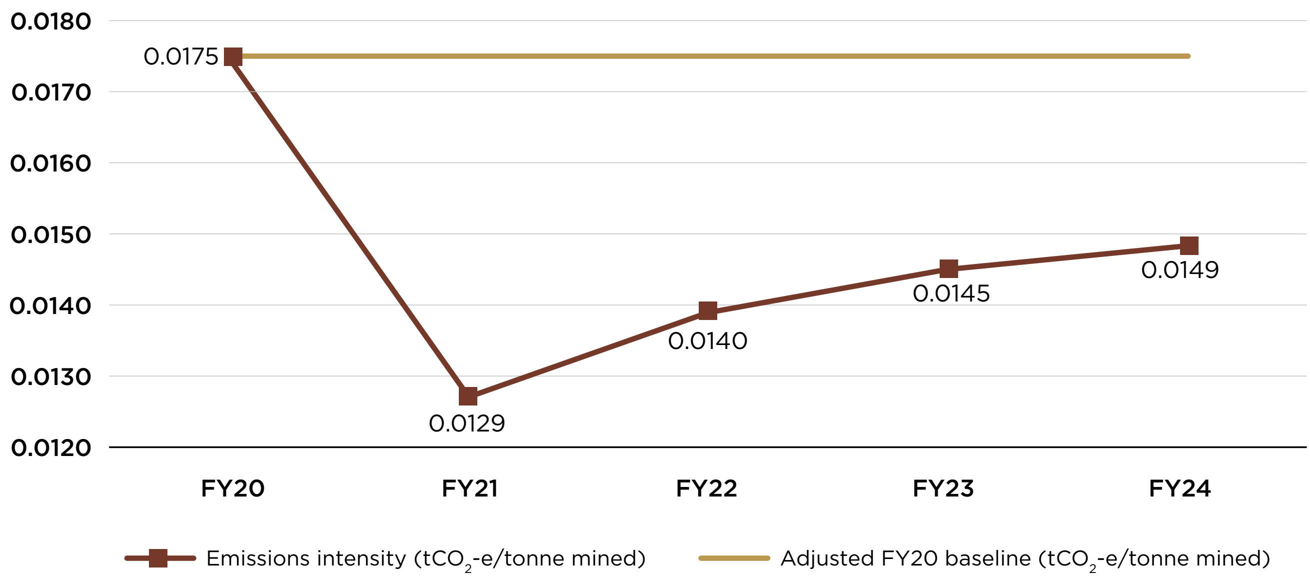
Intensity ratios enable the analysis of energy consumption and GHG emissions data in the context of an organisation-specific metric. Our approach is aligned with the "per tonne mined" intensity metric, which enables us to analyse and consistently compare data in the context of activity at all operations. The FY24 emissions intensity performance compared to FY20 is presented below.

GHG emissions intensity	FY24	FY20 (baseline)[37]	Change (%)
Emissions intensity (total Scope 1 and 2 tCO_2-e per tonne material mined)[40]	0.0149	0.0175	-15

40 FY20 data calculated utilising location-based method and reflective of adjusted FY20 baseline. FY24 data calculated utilising market-based method.
41 Data calculated using market-based method.

Responsible environmental stewardship

GHG emissions intensity FY20 - FY24[42]



Emissions intensity relates to the emission rate relative to the intensity of the mining process. We monitor this, aligned with our mining activity and emissions reduction pathway. Due to the overall change in our operating profile over time, through acquisitions and divestments, there has been an increase in emissions intensity broadly across the business, with variance across sites on performance. This variance is expected given the mixed open pit and underground portfolio.

Our emissions intensity increased from FY23 to FY24, however, remains 15% below the adjusted FY20 baseline. The intensity increase in FY24 reflects Northparkes' incorporation into the portfolio. Consistent with our planned emissions reduction pathway, we will work to implement our Net Zero approach at Northparkes to increase renewable energy and expect this will enable further emissions intensity improvement.

Scope 3 emissions

Our internal Scope 3 emissions reporting remains underpinned by our principles of transparency of data, methodology and selection of material categories, setting a good foundation and structure for reporting, and continuous improvement.

In FY24, we:

- Calculated Scope 3 emissions across five reporting categories aligned with the GHG Protocol (purchased goods and services, capital goods, fuel and energy related activities, business travel, processing of sold products), and validated through a third party.
- Engaged external consultants to assess our assurance readiness regarding Scope 3 emissions, in line with incoming ASRS requirements.
- Partnered with the Sustainability Advantage Sustainable Value Chain Leadership Accelerator program and subject matter experts, 100% Renewables, to undertake direct partnering, engagement and collaboration, focused on achieving measurable Scope 3 emissions reductions within key elements of our upstream and downstream value chain.
- Improved our reporting structure with mapping and external engagements.

We continue to monitor and review our year-on-year trends as we prepare to transition to mandatory disclosure of Scope 3 emissions. We have disclosed Scope 3 emissions to select ESG agencies. They will continue to be tracked internally and validated externally.

Renewable Sourcing Strategy

In FY24, we continued to implement and measure against our established Renewable Sourcing Strategy managed at the Group level, focused on increasing renewable energy usage at all operations. Core considerations include supply security, price risk protection, flexibility to accommodate changing business power requirements and emissions reductions.

The strategy includes an emissions reduction pillar that embeds our Net Zero targets and commitment and renewable energy solutions considerations into decisions made across the value chain when considering future power needs. Key assessment criteria include:

- Security of supply from renewable energy or low emission sources addressed through ensuring structuring, technology and counterparty risks are identified, assessed and mitigated or managed.
- Benchmarking the pricing of renewables or low emission electricity against market pricing or a competitive procurement process.

42 Data reported for assets owned in the respective financial year. FY20 baseline adjusted in FY24 to incorporate acquisition of Northparkes.

- Access to green credits where available and benchmarked against available market pricing.
- Maintaining flexibility in deal structuring to allow for changes in demand profile.
- Taking a whole of business view while maintaining a modular approach to renewable solutions.

These strategic commitments have been applied throughout the Cowal PPA. During FY24, we continued to monitor opportunities to collaborate on similar arrangements and other renewable energy projects across our operations and as part of our Project studies.

Performance: Scenario planning and modelling in line with TCFD

Climate scenario analysis

While it remains challenging to accurately predict future policy and climate change impacts, scenario analysis highlights the range of physical and transitional impacts climate change may present in specific contexts. They allow for strategic decision-making to improve resilience to climate change. Asset level emissions management, industry partnerships and investigation of technological pathways are key to monitoring and achieving medium and long-term emissions targets.

In FY24, we extended our qualitative climate scenario analysis, already in place at Cowal and Mungari, for Ernest Henry as part of a Feasibility Study into the mine extension. These are some of our largest operations and, as required in incoming mandatory disclosures, can be considered representative for the identification and management of emerging climate-related risks and opportunities for the business. They enable an enhanced understanding of the business-wide impacts to revenue, expenditure, operations, workers, supply chains, and payments to governments. While we do not consider our climate-related risks and opportunities as concentrated in a particular geography or facility, we recognise these operations reflect a significant proportion of our risk. We plan to undertake further qualitative assessments of climate impacts for Northparkes in FY25.

We have increased the rigour of our climate risk management through the operational scenario analysis. The scenario analysis undertaken aligned with the recommendations of the TCFD - adopting high, moderate and low emissions scenarios, including below 2°C scenarios, and short, medium and long-term horizons. The underlying analysis was based on data and information from the Intergovernmental Panel on Climate Change (IPCC), including Representative Concentration Pathways (RCP) scenarios and the Network for Greening the Financial System (NGFS) scenarios. The Standards used to assess climate-related risks and opportunities included ISO 14091:2021 Adaptation to climate change — Guidelines on vulnerability, impacts and risk assessment and ISO 31000:2018 Risk Management. The assessment of physical impacts was informed by data and insights from the IPCC RCP scenarios and transition impacts by the NGFS scenarios. These scenarios provide data and information to assess the potential impacts across the mining value chain, allowing for climate considerations and stress testing of potential impacts to operations and in the design of mine expansions.

Overview of scenarios selected for climate scenario analysis

Scenario	Alignment	Scenario Risk Type
High	RCP 8.5, NGFS	Physical
Moderate	RCP 4.5, NGFS	Physical
Low	RCP 2.6, NGFS Net Zero	Physical, Transition

The analyses identified risks of wind damage, extreme rainfall, flooding and lightning due to heavy rainfall events and windspeeds projected approximately to year 2100. Additional risks included reliability of the electricity grid, diesel consumption in equipment and the potential impact of a carbon price on Mungari and its suppliers. These risk factors had previously been identified and were further assessed.

In stress testing against these scenarios, we focused on identifying indicators to support internal decision-making and allowing for adequate information for local and broader stakeholders. Resilience measures will continue to be reviewed as analyses evolve over time, including options to incorporate more quantitative information.

We also note the new Australian legislation for mandatory climate-related reporting due to become law from January 2025, will require two scenarios including high (2.5°C or higher) and low (1.5°C) scenario analyses. These obligations have been factored into our ongoing management of climate risk.

Task Force on Climate-Related Financial Disclosures

With the introduction of IFRS S1 and S2 and ASRS, TCFD will be disbanded and integrated into these standards. TCFD references are valid for FY24 reporting and will be transitioned to ASRS once this is in place. Our strategic climate focus aligned with the TCFD recommendations is presented in the ESG Performance Data TCFD Index.

In FY24, an independent review was conducted of our TCFD disclosures alongside defined and emerging Sustainability disclosures. It verified that we maintain 100% coverage against the TCFD framework, with continuous improvement required in the depth and detail of disclosures under ASRS.

We continued to enhance our disclosures and internal capability regarding TCFD throughout FY24, including stress testing climate scenarios within the Ernest Henry Mine Extension Feasibility Study and improving understanding and disclosures of climate-related financial impacts to the business.

Responsible environmental stewardship

Tailings management Ⓜ

Management approach

We are committed to responsible tailings management, aligned with global best practice for safety, the environment and communities during all phases of the facility life cycle. Our tailings management approach, planning, design, construction and operation is based on compliance with our Tailings Storage Facility (TSF) Sustainability Performance Standard (the Standard), leading industry practices and guidelines to ensure structural stability and support risk mitigating actions. A full list of TSFs is provided in our Church of England Disclosure with references to GISTM and ANCOLD 2019. The disclosure includes current volume, date and findings of recent risk assessments and consequence classifications.

Our tailings management approach integrates climate change, stakeholder engagement, emergency preparedness and management, local communities, receiving environment, dam safety and post-mine land use.

Risk management, review and assurance

Our approach to tailings management is overseen by the Tailings Storage Facilities Governance Committee, which reports through to the Leadership Team and the Board, as governed by the Tailings Storage Facilities Governance Committee Charter. TSF risk assurance is achieved through rigorous design, construction and operations management, routine inspections and monitoring and independent review and audit processes. Risk management and mitigation is a focus, and our work includes continual review and improvement of design and operational practices to further reduce risk. Aligned with our approach to waste minimisation, recycling and reuse, tailings are reused to stabilise many of our underground operations and water is recovered from facilities for reuse in relevant processing applications.

The risk assessment and management of Northparkes' TSFs was a key consideration in the due diligence, acquisition and integration process in FY24. The acquisition introduced two active and three inactive TSFs into the portfolio, which are found to be in general alignment with the Standard.

Performance

Material risk management: All sites have a Critical Control Program in place and regularly conduct and report on Material risk management and the performance of critical control activities, including LOD 1, 2 and 3 activities.

Monitoring and surveillance: All TSFs are operated in accordance with a Tailings Operations Manual and employ monitoring and surveillance systems to monitor TSF performance over time.

Where applicable, real-time monitoring is utilised, and satellite monitoring is also included for all TSFs. This information is integrated into a management system that outlines triggers and response requirements by all sites for active facilities.

Site-based Responsible Person: Each site has an identified Responsible Person to ensure ownership and appropriate management of each TSF.

Dam safety inspections: Formal dam safety inspections are conducted at least annually by the Designer/Engineer of Record, and reports are issued to the Responsible Person for action of recommendations. No material requirements were identified to action in FY24.

Independent review: Our Standard requires operations to obtain independent reviews of designs and conduct dam safety reviews at regular intervals.

Tailings governance: LOD2 tailings assurance is undertaken quarterly, with each operation conducting a performance review focusing on impoundment stability, integrity, risk review and planning coordination. Group level oversight is provided as to whether the TSF design and performance meet accepted standards/codes of practice. Performance reports and operational updates are provided to the Governance Committee and the Leadership Team, with oversight by the Board Risk and Sustainability Committee.

We are committed to responsible tailings management, aligned with global best practice for safety, the environment and communities during all phases of the facility life cycle.

Northparkes Environment team inspecting the vegetation cover of a TSF

FY24 TSF snapshot

8
active tailings storage facilities globally

~23Mt
ore mined from open pit

~10Mt
ore mined from underground

~28Mt
ore discharged to tailings storage facilities

35%
tailings reuse at Red Lake for paste fill – 215kt

7%
tailings reuse at Mungari for paste fill – 133kt

Tailings risk was controlled and further reduced in FY24 by:

- Ongoing review and assurance activity.
- Ongoing remediation of existing structures at Red Lake and Ernest Henry to improve post-seismic stability factor of safety.
- Review and continued implementation of the Tailings Storage Facility Standard, aligning with GISTM.
- Continued construction of the Integrated Waste Landform at Cowal, significantly reducing the likelihood and impact of a dam failure.
- Continued internal tailings governance and oversight of operational performance through quarterly Tailings Storage Facilities Governance Committee meetings across the business, with oversight by the Risk and Sustainability Committee.
- Approval of an in-pit TSF at Mungari.
- Continued compliance improvement to the Standard as evident in the quarterly compliance reviews and annual internal assurance process.
- Developing innovative partnerships, including with the University of Queensland and the Commonwealth Government, on an incoming Trailblazer Agreement for tailings rehabilitation cover trials to demonstrate our commitment to innovation in tailings management.

Environmental impacts and Waste (including Circular economy) Ⓜ

Effluents and waste

Management approach

We ensure waste, product materials and other effluents generated from mining and processing activities are responsibly handled, stored and disposed. Operational waste streams are generally classified as mineral and non-mineral. Waste management, recycling and reuse options are integrated into the Group induction developing broad awareness on the importance of responsible waste management.

Each operation manages non-mineral and mineral waste in accordance with a comprehensive site-specific Waste Management Plan, developed as early as reasonably practicable in the mine life cycle and updated regularly. These plans ensure responsible non-mineral and mineral waste management by specifying how different types of waste produced by activities are to be managed, including identification of opportunities for waste minimisation, recycling and reuse. Non-hazardous waste streams such as scrap steel, mill balls, liners, copper wire, electrical cables, timber, cardboard, glass and plastic are diverted from landfill and recycled, where feasible. We also aim to recycle hazardous waste, such as waste oil, oil filters, oily rags, grease, hydraulic hoses, batteries and e-waste, where possible.

Mineral waste is the most substantial waste stream generated and is defined as excess material removed from the mine void to reach the ore body and remaining materials once minerals are extracted from ore during processing (i.e., waste rock and tailings). All mineral wastes are handled in accordance with our Sustainability Performance Standards and licence conditions.

Each operation is unique in terms of potential for acid mine drainage (AMD), neutral mine drainage (NMD) and saline drainage (SD) generation through mineral waste movement and placement. Mining activities can only proceed if Feasibility Assessments, including in relation to closure planning, demonstrate the risk can be managed. Where management of potentially problematic material is uncertain or known to occur, the operation maintains plans and implements mitigation measures and progressive rehabilitation activities to ensure the receiving environment is not impacted during the operational and post-mining phases.

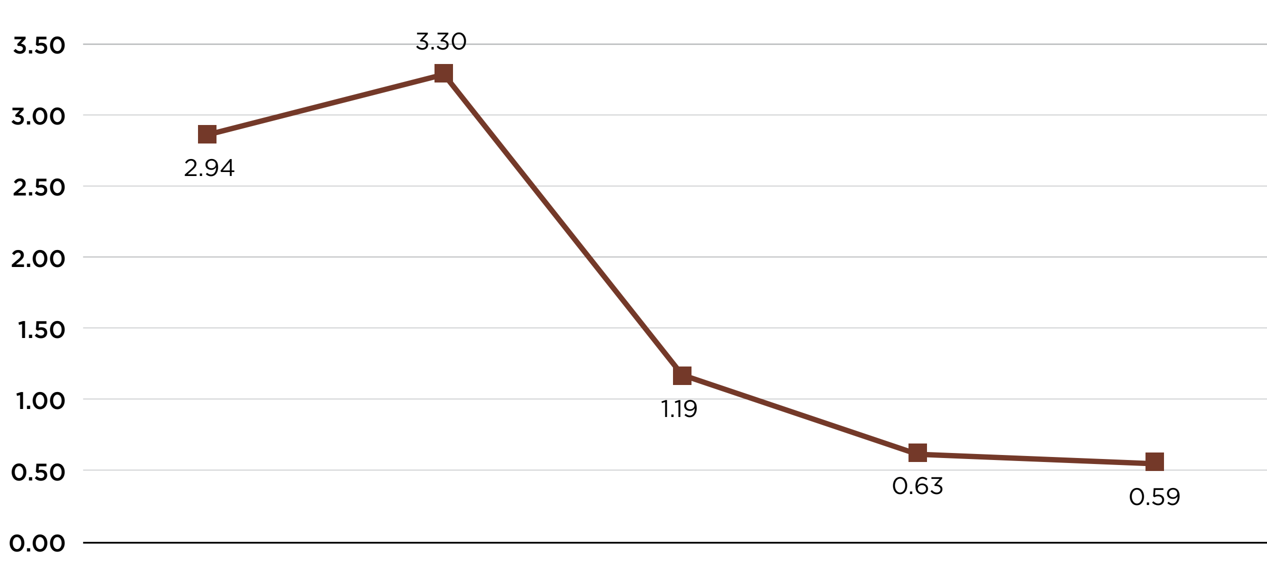
An integrated planning approach is taken to the management of mineral waste. Mineral waste is geochemically categorised prior to mining, haulage, treatment (if required), placement, encapsulation (if required) and rehabilitation. The integrated planning approach assures the protection of environmental values where we operate through application of appropriate technical and economic risk management.

Performance: Mineral waste

In FY24, our operations excavated ~19.3 million tonnes of waste rock to extract ~32.6 million tonnes of ore. This represents an average waste to ore ratio of 0.59, an improvement from 0.63 in FY23.

A lower strip ratio equates to less material being moved to access ore, resulting in a more efficient operation by decreasing total emissions associated with material movement and decreasing land disturbance required to store waste rock. The ratio generally decreased due to a reduction in the overall proportion of open cut mining (generally higher strip ratio) compared to underground mining methods across the portfolio. The key drivers of this change were Cowal's increase in underground production and Ernest Henry's return to full underground production following the March 2023 weather event that had a significant impact on mining activity.

Waste to ore strip ratio FY20 - FY24[43]



43 Data reported for assets owned in the respective financial year.

Performance: Non-mineral waste

We generate non-mineral waste via a range of activities throughout our mine life cycle, including exploration, mining, maintenance and processing.

During FY24, approximately 32,436 tonnes of non-mineral waste was generated across our operations, of which 72% was classified as non-hazardous waste. In FY24, 42% of the total non-mineral waste was recycled across our operations. All waste generated was recycled or disposed of following applicable waste regulations and each operation's Waste Management Plan.

To contribute to the broader community's responsible waste management, Mt Rawdon and Commonwealth Scientific and Industrial Research Organisation (CSIRO) extended their trials and partnered in a three-year project to 2026 investigating opportunities in bioplastics, a plastic alternative that breaks down naturally. It seeks to deploy the emerging field of microbiological engineering to find novel uses for waste streams. The blue-green algae growing abundantly in some of Mt Rawdon's water management dams allow for the exploration of mine water as a low-cost resource, with high biotechnological potential for bioplastics production, and identification of innovative solutions for long-lasting plastics and microplastics in the environment. Following trials with community partners, Mungari initiated an e-waste repurposing initiative that allowed for the operation's used IT equipment to be refurbished for use by our people and local communities.

Environmental management

Management approach

Effective management of mining-related activities sits at the core of our approach to environmental compliance, as we focus on protecting cultural and environmental values, including the rights and interests of local communities. Our operations are subject to environmental regulation in the jurisdictions in which we operate through permitting, approvals and regulatory compliance requirements. Permit and licence provisions provide stringent requirements to support the health and safety of local communities and the environment.

All operations are required to maintain regular monitoring and reporting to demonstrate compliance with current legal and other obligations, supported by assurance activity.

A uniform internal reporting system is implemented across all operations. All environmental events, including potential non-conformance to any licence provisions, are assessed according to their actual or potential environmental and/or regulatory consequence. Levels of environmental incidents are tracked based on factors such as spill volume, incident location (onsite or offsite), potential or actual environmental impacts and legal obligation, on a scale from Very Minor to Extreme in alignment with the Evolution Risk Assessment Matrix.

Performance

In FY24, all operations retained a strong focus on environmental performance with no material environmental incidents reported. Two Moderate category events were recorded with one event being two fines (>US$10,000) issued and paid in relation to administrative non-compliances at Cowal associated with delayed submission of spatial files in accordance with the site's *Environment Protection and Biodiversity Conservation Act 1999* approval. In another event, an environment protection order was issued to Mt Rawdon for a non-compliance in late 2022 related to the release of water associated with an unseasonal rainfall event. This matter was addressed through maintenance of instrumentation and closed out in FY24. Other Minor or Very Minor risk events occurring during FY24 were reported to the relevant government authority, where required, and remedial action taken, where appropriate.

In FY24, Mt Rawdon and Northparkes conducted triennial independent third-party (LOD3) audits of compliance with environmental permits, in accordance with regulatory requirements. Both sites achieved >95% compliance, with identified non-compliances either already addressed or plans implemented to address.

Air quality

Management approach

We are committed to monitoring and mitigating the potential impacts of our operations to ensure air emission controls are effective, and operations are not having an adverse effect on human health or the environment due to dust and other airborne particulates.

Management and minimisation of air emissions is required to protect sensitive receptors, including people and the environment, in the vicinity of mining operations. Air quality is managed according to jurisdictional regulations and licences and our Sustainability and Strategic Planning Standards to ensure air emissions remain within specified limits. We also review and assure air quality at our operations in response to material incidents and emerging risks within our industry.

Air quality monitoring equipment is used to monitor and validate the performance and efficiency of our operations' air quality management systems. Air quality monitoring analysis is carried out by third-party accredited laboratories and externally reported, as required by environmental licences. We continually seek opportunities to improve air quality management at our operations.

Performance

In FY24, all operations were in full compliance with regulated limits for particulate emissions. Monitoring of depositional dust at the operations met licence conditions. We also supported the NSW Mineral Council's submission to the NSW Parliamentary Inquiry into the *Current and potential impacts of gold, silver, lead and zinc mining on human health, land, air and water quality in New South Wales.*

Cowal and Red Lake experienced unseasonal weather, which increased the risk of dust emissions from TSFs. Both sites applied dust suppression techniques on the surface of their major TSFs including the use of a bonding agent which proved highly effective.

Our operations implement various condition-relevant methods to control dust generation. Northparkes reduces the risk of dust generation from drying TSFs through two methods: vegetation cover is established for TSFs unlikely to be used in the short-term, and tyned ripper equipment is used to create roughened strips for TSFs likely to be operational in the short-term. Learnings from these methods are continually reviewed and investigated for application across other operations.

Refer to the ESG Performance Data document for performance on air emissions.

Water management Ⓜ

Management approach

Access to safe, clean water and sanitation is a basic human right, supporting healthy ecosystems, food production and livelihoods. We acknowledge water as a shared resource, and recognise its globally recognised social, cultural, environmental, ecological and economic value that drives improved water management and stewardship. Our strategic water management approach is centred on managing water and climate-related risks to secure availability and sustainability of clean water for all, such that human health and the environment are protected, and operations are sustainable and resilient in a variable water security environment.

Our Managing Director and Chief Executive Officer has ultimate accountability for our water and environmental management, with the Chief Operating Officer and the Vice President Sustainability holding responsibility for this portfolio's ongoing management and oversight – reflecting its critical importance. Management is responsible for the performance, and the Board maintains oversight through the Risk and Sustainability Committee.

Our water strategy and objectives are informed by robust engagement with stakeholders, including investors, policymakers, non-government organisations and communities. Through stakeholder engagement, we understand, assess, track and monitor water regulatory changes at the local level, including incoming regulation, different scenarios and impacts. Our strategy focuses on optimising water consumption by reducing reliance on freshwater and maximising the reuse of mine affected water to reduce competition in external raw water demand with agricultural and other industries and communities, while minimising the potential for operational impacts on water quality. We aim to minimise operational water consumption, effectively and efficiently use water in our processes, and ensure any effluents are treated to meet required water quality standards.

Each operation maintains Water Management Plans and site-wide water balances to guide responsible water use and efficiencies throughout the mine life cycle and in the context of the local catchment. They also maintain site-specific inductions, several of which include local water-related risks. Water-related activities and assessments are regulated by relevant legislation in each jurisdiction and are subject to set quality and quantity thresholds.

Performance

In FY24, the importance of water management was emphasised during changes in the operations, their production profiles, and changing climatic conditions including extreme and unplanned water events that limited storage capacity at some locations.

We maintained detailed plans at each operation to encourage water reuse and improved water security. Our target is to improve our water security by decreasing freshwater use intensity below our FY20 baseline. This was adjusted in FY24 post the Northparkes acquisition from 0.34 kilolitres per dry tonne milled (kL/dtm) to 0.40 kL/dtm.

Our freshwater use intensity has decreased 45% against the adjusted FY20 baseline to 0.22 kL/dtm. This is, however, an increase from FY23 (0.19 kL/dtm), reflecting the overall drier conditions experienced at many of our operations. Efforts continued across our operations throughout the year to improve water efficiency, including:

- Cowal's use of 'WaterGuard' - an additive proven to reduce evaporation rates on dams while being environmentally-friendly;
- Mungari's potable water leak detection system; and
- Ernest Henry's review of site water management strategies and changes to processing plant infrastructure.

In addition, as part of ongoing improvements to the water management system at Red Lake's TSF, an expansion to the engineered wetland was undertaken in FY24 to increase the system by 10 hectares, bringing the total wetland area to 15 hectares. The new wetland will not only enhance the water quality of the system but provide increased habitat for marsh dwelling animals and insects. The benefits of wetlands at Mt Rawdon are highlighted in the accompanying case study.

None of our operations are in high to extremely high baseline water stress areas. This determination of water stress is adapted from definitions set in the ICMM Mining with Principles Water Reporting[44], CEO Water Mandate, WRI Aqueduct Global Water Tool and Water Footprint Network[45].

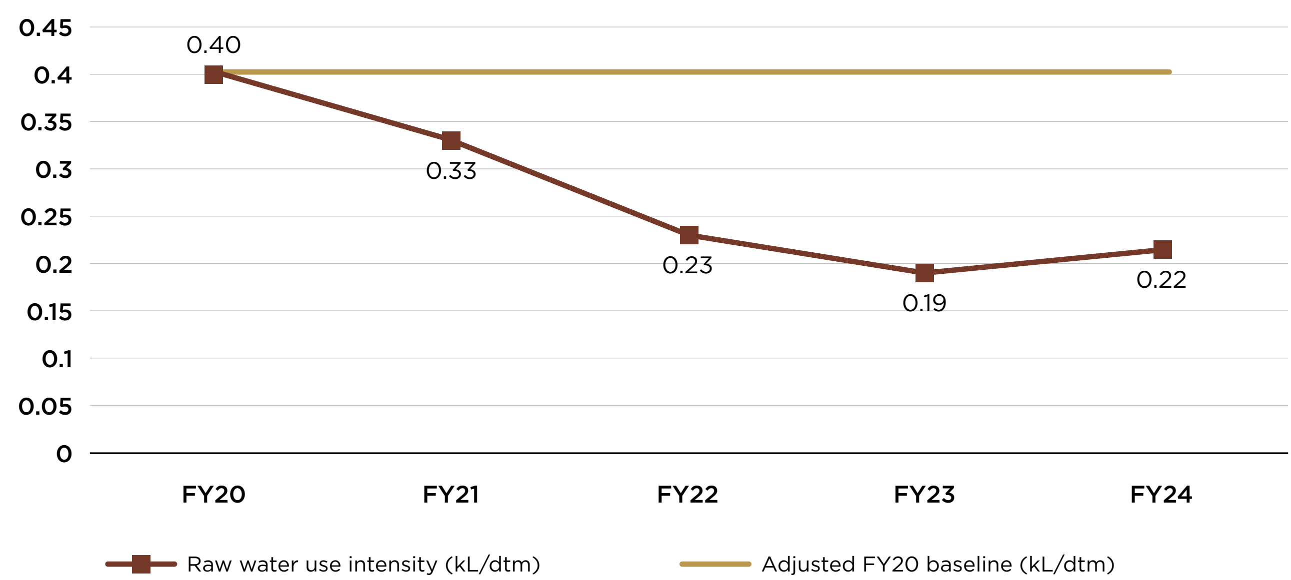
Our future efforts in water management will continue to focus on water security, including the mitigation of the effects of extreme weather events (drought and flood) through a reduction of total water demand, increase in water reuse, water storage and stormwater, sediment and erosion control best practice controls.

Detailed information on our water withdrawal, discharge and consumption by source and region can be found in the ESG Performance Data.

44 The ICMM definition is "The ability, or lack thereof, to meet the human and ecological demand for freshwater. Water stress comprises three primary components: availability, quality and accessibility. Water stress is based on subjective elements and is assessed differently depending on societal values, such as the suitability of water for drinking or the requirements to be afforded to ecosystems." (Source: Adapted from CEO Water Mandate (2014), Corporate Water Disclosure Guidelines Toward a Common Approach to Reporting Water Issues).

45 Note that water stress remains subjective and the inputs into water stress indicators vary between tools and networks. This subjectivity informs our changed references and definitions from FY23 onwards.

Water intensity FY20 v FY24[46]



Case study

Mt Rawdon expands upon its wetland trial, linked to the Mt Rawdon Pumped Hydro Project (MRPH)

As Mt Rawdon progresses towards mine closure and rehabilitation, we are reviewing options to transition the site in innovative ways, including the MRPH and to open woodlands suitable for cattle grazing. One exciting way to facilitate this transition is utilising wetlands. Wetlands act as a filter to remove materials from water, ensuring any water released from the site is suitable for improved pasture, cattle or to enter local waterways. The focus of this option is on passively treating water from the mine site to support its application for future land uses.

Following existing work with CSIRO, in mid-May 2024 earthworks were undertaken and a three-stage construction phase commenced. To design the wetlands as a long-term passive system and natural filter, work is underway through full-scale field trials to improve the quality of water running off the mine site, so it is suitable for offsite release. There will be six types of areas with differing materials to encourage microbes to grow, filter, and improve water quality. It is anticipated the project will require more than 400m of excavation at length with ~2,000m^3 of mulch, ~1,300m^3 of gravel, ~1,700m^3 of other organics like leaf material and soil and the installation of ~12,000m^2 of liner.

We will monitor the project to analyse its performance and identify improvements to guide the construction of additional wetlands as the mine progresses through closure and rehabilitation.

46 Data reported for assets owned in the respective financial year. The adjusted FY20 baseline has been updated to reflect current FY24 portfolio.

Land use and Biodiversity Ⓜ

Management approach

Local stakeholders are valuable sources of knowledge on biodiversity. We engage with local communities to identify sensitive areas, monitor potential impacts and incorporate stakeholder feedback into our environmental stewardship approach. We also work with local conservation groups to identify opportunities to collaborate to achieve positive environmental outcomes. An important part of our approach is requiring our suppliers and business partners to demonstrate their biodiversity stewardship in our tendering process.

Our biodiversity strategy is linked to the stage of development of projects and operations. Biodiversity risks at all active operations are mitigated through ongoing processes in risk assessments, baselining, field mapping of flora and fauna, mitigation and land disturbance permitting. Biodiversity assessments are undertaken in the project planning phase to identify the risk of impact to biodiversity and mitigation opportunities, which inform the development and review of operational plans.

We strive to apply the mitigation hierarchy from Avoidance, Reduction, Restoration to Transformation with the ambition of no net loss in protecting biodiversity and ecosystems. We design our exploration and mining activities to avoid or minimise impact to protected areas and commit to the protection of World Heritage Sites. We are committed to minimising impacts to forests and our environmental footprint through risk-based and responsible biodiversity management, and to enhancing biodiversity via reforestation nearby our operations via our Environmental Enhancement projects and investments. Sensitive flora and fauna are only impacted where the internal and external risk management and permitting process have been met and no other alternative is available.

Biodiversity Management Plans, which meet the requirements of our Biodiversity Sustainability Performance Standard and local regulations, are in place at all operations, where required, and are regularly reviewed. All activities are monitored in accordance with relevant jurisdictional obligations.

In FY24, we expanded on our FY23 gap analysis conducted against TNFD in its beta framework, to review any differences to the final TNFD framework released. No material differences were identified from our previous assessment. Opportunities were incorporated into previous recommendations associated with biodiversity risk assessments and frameworks and will continue to be utilised to build internal capability and inform future disclosures in relation to regulated and non-regulated biodiversity impacts and dependencies.

Performance

Throughout FY24, our commitment to land use and biodiversity protection has been demonstrated through initiatives including:

- Managing 8,632 hectares of disturbed land under mining lease (at the close of FY24), with all under our mining leases currently managed through regularly reviewed Biodiversity Management Plans related directly to mining.
- Contributing approximately 14% of community investment to improve or enhance environmental outcomes.
- Maintaining no impact to any World Heritage Sites.
- Finalising the Cowal Biodiversity Stewardship Agreement with the NSW Government.
- Cowal donating 150 native plants to local schools to celebrate 2024 World Environment Day.
- Continuing to improve environmental outcomes at Red Lake's Balmer Lake.
- Expanding the existing CSIRO wetlands trial at Mt Rawdon as showcased above.
- Embedding the disturbance permitting process at all operations, including Mungari's development of a digital disturbance permitting process.
- Undertaking baseline flora and fauna studies prior to any significant disturbance, including the baseline ecological studies at Cloncurry North exploration site and surveys for the Julia Creek dunnart.
- Monitoring biodiversity offset and conservation sites' status, including Northparkes' Kokoda conservation area activities (ecological monitoring, track maintenance and flora and fauna (pest) management).
- Ensuring environmental protection through sediment and erosion control including the Cowal Lake Protection Bund.
- Partnering with communities and conservation not-for-profit organisations including Lake Cowal Foundation, and community clean-up activities at Red Lake and Ernest Henry.

The status of disturbed and rehabilitated land at the operations can be found in the ESG Performance Data.

Mine closure, rehabilitation and legacy Ⓜ

Management approach

Our mine closure plans aim to ensure the environment where mining activities take place is restored or transformed to a long-term sustainable state, either similar to what existed prior to mining or is suitable for another use, consistent with relevant stakeholder engagement outcomes. We have obligations to make operational and financial provisions to ensure mine closure plans, rehabilitation and remediation activities are completed with consideration and engagement of external stakeholders.

Closure planning is undertaken for all operations, and financial provisions updated as required. We plan for closure from the earliest stages in the mining life cycle. This includes consideration of closure at the Feasibility stage, prior to mine development, ensuring appropriate due diligence, undertaking impact assessments and allocation of adequate resources for planning, implementing and monitoring closure activities throughout the active-closure and post-closure phases.

The Rehabilitation and Mine Closure Sustainability Performance Standard requires the use of a responsible approach to land management through the operational phase and into closure, including progressive rehabilitation during the life of the mine. Closure planning requires site-specific closure objectives, metrics and targets, and completion criteria for each operation. Closure plans are required to be developed to a level of detail that reflects the stage of each mine's life cycle, operational changes and progressive rehabilitation requirements. They are updated in accordance with the Standard and regulatory requirements.

Progress reports on implementation and compliance with ongoing rehabilitation commitments are submitted to regulatory authorities as required and third-party auditors annually.

Performance

During FY24, we:

- Integrated stakeholder engagement in the planning phase.
- Rehabilitated 1,118 hectares of land.
- Maintained closure plans for all operational sites.
- Conducted annual audit of rehabilitation provision and financial assurance (LOD3).
- Continued monitoring revegetation success in rehabilitated areas.
- Undertook detailed closure planning for landforms and wetlands development at Mt Rawdon to support rehabilitation objectives and ecosystem protection.
- Performed ongoing extensive reclamation activities at Red Lake for the treatment of legacy arsenic trioxide materials from underground workings.
- Achieved significant milestones for the MRPH. Read the case study here, and more information about the project here: www.mtrawdonhydro.com.au.
- Confirmed ~$493 million[47] government-registered financial assurance (rehabilitation liability) – 30 June 2024 (refer to accompanying table).

Overview of rehabilitation liabilities as of end of FY24

Evolution operation	Cowal	Ernest Henry	Northparkes	Red Lake	Mungari	Mt Rawdon
Type of government surety	Surety bond	Levy	Surety bond	Letter of credit	Levy	Levy
Total government registered financial assurance	$127.9M[48]	$144.4M	$46.8M	C$63.4M	$57.5M	$47.3M

47 Red Lake's rehabilitation liability converted from Canadian to Australian dollars using exchange rate at the close of 30 June 2024.
48 The increase from the FY23 figure is attributable to additional disturbance area, since the previous surety bond was set in 2016, and rehabilitation reforms in New South Wales through the Mining Amendment (Standard Conditions of Mining Leases—Rehabilitation) Regulation 2021 requiring changes to the way financial assurance is assessed. Similar changes are expected in some other operating jurisdictions moving forward.

Glossary

"AA" rating	Rating credibility used in the MSCI review. The lowest rating of "CCC" to the highest rating of "AAA".
$	All amounts are expressed in Australian dollars unless stated otherwise.
ALO	Act Like an Owner. An internal ongoing recognition program that rewards our employees for their supportive behaviour and good ideas.
AMD	Acid mine drainage. When sulphide minerals (predominantly pyrite) are exposed to air, which allows them to oxidise and break down.
ANCOLD	Australian National Committee on Large Dams.
ASRS	Australian Sustainability Reporting Standards. Will set the mandatory climate-related financial reporting requirements for Australian entities.
B	Billion. The number equivalent to one thousand million.
BARS	Basic Aviation Risk Standard. An International Aviation Safety Program which uses BARS Standards to review aircraft operators supporting companies in their risk oversight of contracted aviation activities.
BBP	Balanced Business Plan.
BEV	Battery electrical vehicles. Fully-electric, meaning they are solely powered by electricity and do not have a petrol, diesel or LPG engine, fuel tank or exhaust pipe.
CERT	Corporate Emissions Reduction Transparency Report.
CMT	Crisis Management Team. The CMT provides support through management of crisis level issues.
CN	Cyanide. A chemical compound used in the extraction of gold and silver.
CoP	Community of Practice.
CO_2-e	Carbon dioxide equivalent. A standard unit for measuring carbon footprints.
COVID-19	Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) is the strain of Novel coronavirus that causes coronavirus disease 2019. A mild to severe respiratory illness that is caused by a coronavirus and is transmitted chiefly by contact with infectious material (such as respiratory droplets) or with objects or surfaces contaminated by the causative virus.
CPR	Cardiopulmonary resuscitation.
CSA	Corporate Sustainability Assessment. A scoring methodology that companies and investors can review on a company's ESG.
CSIRO	Commonwealth Scientific and Industrial Research Organisation. An Australian government agency responsible for scientific research.
Dewatering	The act of taking water from an operating mine.
DJSI	Dow Jones Sustainability Indices. These are a family of indices evaluating the Sustainability performance of thousands of companies globally.
EAP	Employee Assistance Program. This is available to employees and their families to use to assist with their health and wellbeing.
ERT	Emergency Response Team. Teams built at each operation to support both our operations and assist communities through significant incidents or threatening situations.
ESG	Environmental, Social and Governance. The three key factors when evaluating the sustainability and ethical impact of an investment in a company or country.
ESS	Employee Share Scheme. A scheme introduced by Evolution that supports the issuing of shares to our full and part-time employees to ensure they share in Evolution's success.
FairCall (KPMG)	Whistleblower reporting service provided by KPMG.
FCEV	Fuel cell electric vehicles.
FNP	First Nation partners.
FPIC	Free, Prior and Informed Consent. A principle protected by international human rights standards originating from and reinforcing the right to self-determination.
FSB	Financial Stability Board. An international body that monitors and makes recommendations about the global financial system.
GHG	Greenhouse Gas. Compound gases that trap heat or longwave radiation in the atmosphere.
GRI	Global Reporting Initiative. Independent, international organisation that provides the world's most widely used standards for Sustainability reporting.
ICMM	International Council on Mining and Metals. An international organisation whose purpose bringing together a safe, fair and sustainable mining and metals industry.
IFRS	International Financial Reporting Standards. Set a comprehensive global baseline for sustainability disclosures through IFRS S1 and S2.
IMT	Incident Management Team.
IPCC	Intergovernmental Panel on Climate Change.
ISO 31000	International Organisation for Standardisation. ISO 31000 Risk Management Guidelines provide principles, a framework and a process for managing risk.
ISSB	International Sustainability Standards Board.
ISS ESG	Institutional Shareholder Services (ISS). ISS ESG is a business that provides corporate and company ESG research and ratings.
ITRB	Independent Tailings Review Board.
IWL	Integrated waste landform. A simple definition is a tailings storage facility that is located inside waste rock storage.
JSA	Job Safety Analysis.
JHA	Job Hazard Analysis.
kL	Kilolitre. Measurement equivalent to 1,000 litres.
kt	Kilotonne. Measurement equivalent to 1,000 tonnes.
LCF	Lake Cowal Foundation. A not-for-profit Environmental Trust established in June 2000 to protect and enhance Lake Cowal, a nationally significant wetland located 45km north of West Wyalong, New South Wales.
LCCC	Lake Cowal Conservation Centre. A community educational facility where school students, land managers and community members can learn about and experience a variety of issues associated with natural resource management.
LGBTQ2S+ community	Loosely defined grouping of people who identify as Lesbian, Gay, Bisexual, Transgender, Queer or Questioning, Two-Spirit and other minorities.

LGC	Large-Scale Generation Certificates.
LOD	Line of Defence. Refers to the levels of assurance wherein LOD1 involves the Internal Audit Program, LOD2 involves the Management System and Standards Audit, and LOD3 involves external assurance.
LOM	Life of Mine.
M	Million. Number equivalent to the product of one thousand times one thousand.
MAW	Mine affected water. Water that interacts with our infrastructure and is managed on site.
MillROC	Milling Remote Optimisation Consulting and Coaching. Software produced by Orway IQ which is a cloud-based reporting of all plant data related to circuit performance and optimisation.
ML	Megalitre. Measurement equivalent to one million litres.
MSA	Modern Slavery Act. The Commonwealth Modern Slavery Act 2018 (the Act) established Australia's national Modern Slavery Reporting Requirement (reporting requirement). The reporting requirement entered into force on 1 January 2019. The reporting requirement aims to support the Australian business community to identify and address their modern slavery risks and maintain responsible and transparent supply chains.
MPCDB	Mt Perry Community Development Board. This exists to promote and support all forms of community and economic development within the town of Mt Perry and surrounding areas.
MSCI	Morgan Stanley Capital International - an investment research firm.
NGER	National Greenhouse and Energy Reporting. A national framework for reporting and disseminating company information and greenhouse gas emissions, energy production and energy consumption.
NIST	National Institute of Standards and Technology. Founded in 1901, NIST is one of United States' oldest physical science laboratories; they released a cyber security framework that integrates industry standards and best practices to help organizations manage their cyber security risks.
NIER	Northern Industrial Electricity Rate Program. Assists Northern Ontario's largest industrial electricity consumers to reduce energy costs, sustain jobs and maintain global competitiveness.
NGFS	Network for Greening the Financial System.
NGOs	Non-governmental organisation. A non-profit, citizen-based group that functions independently of government.
NMD	Neutral mine drainage. In some instances, the acidity produced by sulphide oxidation can be neutralised in the presence of carbonate minerals.
NPI	National Pollutant Inventory. The NPI provides the community, industry and government with free information about substance emissions in Australia.
OSHA	Occupational Safety and Health Administration.
PAF	Potentially Acid Forming. Classification of a rock when tested if it has the potential to generate acid as a result of a metal mining activity.
PPA	Power Purchase Agreement.
PPC	Personal protective clothing.
PPE	Personal protective equipment. Anything used or worn on our employees to minimise risk to their health and safety.
RAM	Risk Assessment Matrix.
RCP	Representative Concentration Pathways.
S&P Global	Company that provides data, research, news and analytics to customers including institutional investors and corporations.
SA	Sustainability Advantage. NSW Government program encouraging and accelerating the sustainability of medium to large businesses.
SAQ	Supplier Assessment Questionnaire.
Scope 1	Category of greenhouse gas emissions. Scope 1 is sometimes referred to as direct emissions and refers to emissions released to the atmosphere as a direct result of an activity.
Scope 2	Category of greenhouse gas emissions. Scope 2 refers to emissions released to the atmosphere from the indirect consumption of an energy commodity.
SFAIRP	So Far as is Reasonably Practicable.
SD	Saline drainage. This is saline and metal-rich drainage that has been produced by the oxidation of metal sulphides that do not generate net acidity.
SRMs	Supplier relationship meetings.
SSP	Shared Socioeconomic Pathway.
STIP	Short term incentive plan.
SVP	Shared Value Projects. Future-focused legacy projects that deliver community and/or environmental outcomes locally, regionally and nationally.
t	tonnes.
TARP	Trigger Action Response Plan. Consists of a set of documented and known workplace hazards that need to be continuously checked for.
TCFD	Task Force on Climate-related Financial Disclosures. An organisation that was established in December 2015 with the goal of developing a set of voluntary climate-related financial risk disclosures which may be adopted by companies.
TNFD	Task Force on Nature-related Financial Disclosures. An organisation formally launched in June 2021 with the goal of developing a set of voluntary nature-related financial risk disclosures which may be adopted by companies.
TRIF	Total Recordable Injury Frequency. Usually forms part of the acronym TRIFR and refers to the number of fatalities, lost time injuries, alternate work, and other injuries requiring medical treatment per million hours worked.
TSF	Tailings storage facility. A reservoir or dynamic structure designed to safely store left over materials from the processing of mined ore.
UNGC	United Nations Global Compact. It is a non-binding United Nations pact to get businesses and firms worldwide to adopt sustainable and socially responsible policies, and to report on their implementation.
UNGP	United Nations Guiding Principles on Business and Human Rights. They are a set of guidelines for States and companies to prevent, address and remedy human rights abuses committed in business operations.
UNSDGs	United Nations Sustainable Development Goals. These are global goals adopted by all United Nations Member States as a universal call to action to end poverty, protect the planet and ensure that all people enjoy peace and prosperity by 2030.
WCC	Wiradjuri Condobolin Corporation, a First Nation partner at our Cowal Gold Operations.
