IAMGOLD CORPORATION

2023 Scope 3 Greenhouse Gas Emissions Report

Table of Contents

About This Report

Welcome to IAMGOLD's 2023 Scope 3 Greenhouse Gas (GHG) Emissions Report. The purpose of this report is to provide information on IAMGOLD's Scope 3 screening assessment including boundaries, methodologies and assumptions.

Scope 1 emissions include direct emissions from sources owned or controlled by IAMGOLD such as fuel to operate the power plant, fleet and mining equipment. Scope 2 emissions are indirect emissions from the generation of energy purchased by IAMGOLD such as purchased electricity. Scope 3 emissions are all indirect emissions (not included in Scope 2) that occur in IAMGOLD's value chain, including both upstream and downstream emissions. For example, in gold mining, Scope 3 emissions include upstream emissions from the production of fuel, manufacturing of equipment, and business travel and downstream emissions from the processing and transportation of sold gold.

Measuring IAMGOLD's Scope 3 emissions represents an important step in understanding our value chain emissions and identifying where emissions are highest. This early-stage work in measuring our Scope 3 emissions will help us focus our efforts on the most significant emissions within our value chain and shape our approach in managing these emissions over time. This complements ongoing efforts to decarbonize across our Scope 1 and 2 emissions as part of our broader decarbonization strategy. Further updates will be provided in our 2024 Sustainability Report.

Standards

This report follows the guidance of various internationally recognized standards, including the GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard, GHG Protocol's Technical Guidance for Calculating Scope 3 Emissions (Version 1) and International Council on Mining and Metals' (ICMM) Scope 3 Emissions Accounting and Reporting Guidance.

In alignment with the GHG Protocol, IAMGOLD's Scope 3 assessment includes all seven GHGs covered by the Kyoto Protocol: carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulphur hexafluoride (SF_6), and nitrogen trifluoride (NF_3).

All emissions data is reported in carbon dioxide equivalent (CO_2e), the standard unit for comparing GHG emissions. CO_2e is calculated using Global Warming Potential (GWP), which measures each gas's heat-trapping effectiveness relative to CO_2. The GWP factors applied in this analysis were sourced from the Intergovernmental Panel on Climate Change's 6th Assessment Report.

Reporting Period and Boundaries

This report covers Scope 3 emissions from the 2023 calendar year (January 1 to December 31, 2023). IAMGOLD undertook a screening-level assessment which involved completing an evaluation of the Company's Scope 3 emissions using available data whenever possible and assumptions to estimate emissions across relevant Scope 3 categories when actual data was not available. The spend-based method was the primary calculation method applied; however, where feasible, more precise calculation methods were incorporated. Additional details on the estimation methodology are available upon request. In line with the GHG Protocol regarding Scope 3 screenings, not all of the emissions accounted for in this inventory were exclusively generated in the reporting period. That is, a portion of upstream emission categories may have been produced before 2023, while for the downstream emission categories, a portion of the emissions may be produced in future years as a result of activities in 2023. To further clarify:

- Activities for which expenses were incurred in the reporting period (2023) were included.
- Purchases arriving in 2023 but paid for in 2022 or 2024 were excluded.

IAMGOLD intends to report our Scope 3 emissions on an annual basis.

Assurance

The Company's Scope 3 emissions has not been externally assured. Following the publication of IAMGOLD's 2023 Sustainability Report that was released in May 2024, the Company sought third party verification with a limited level of assurance under ISO 14064-3 for our Scope 1 and 2 emissions, which was completed in December 2024.[1]

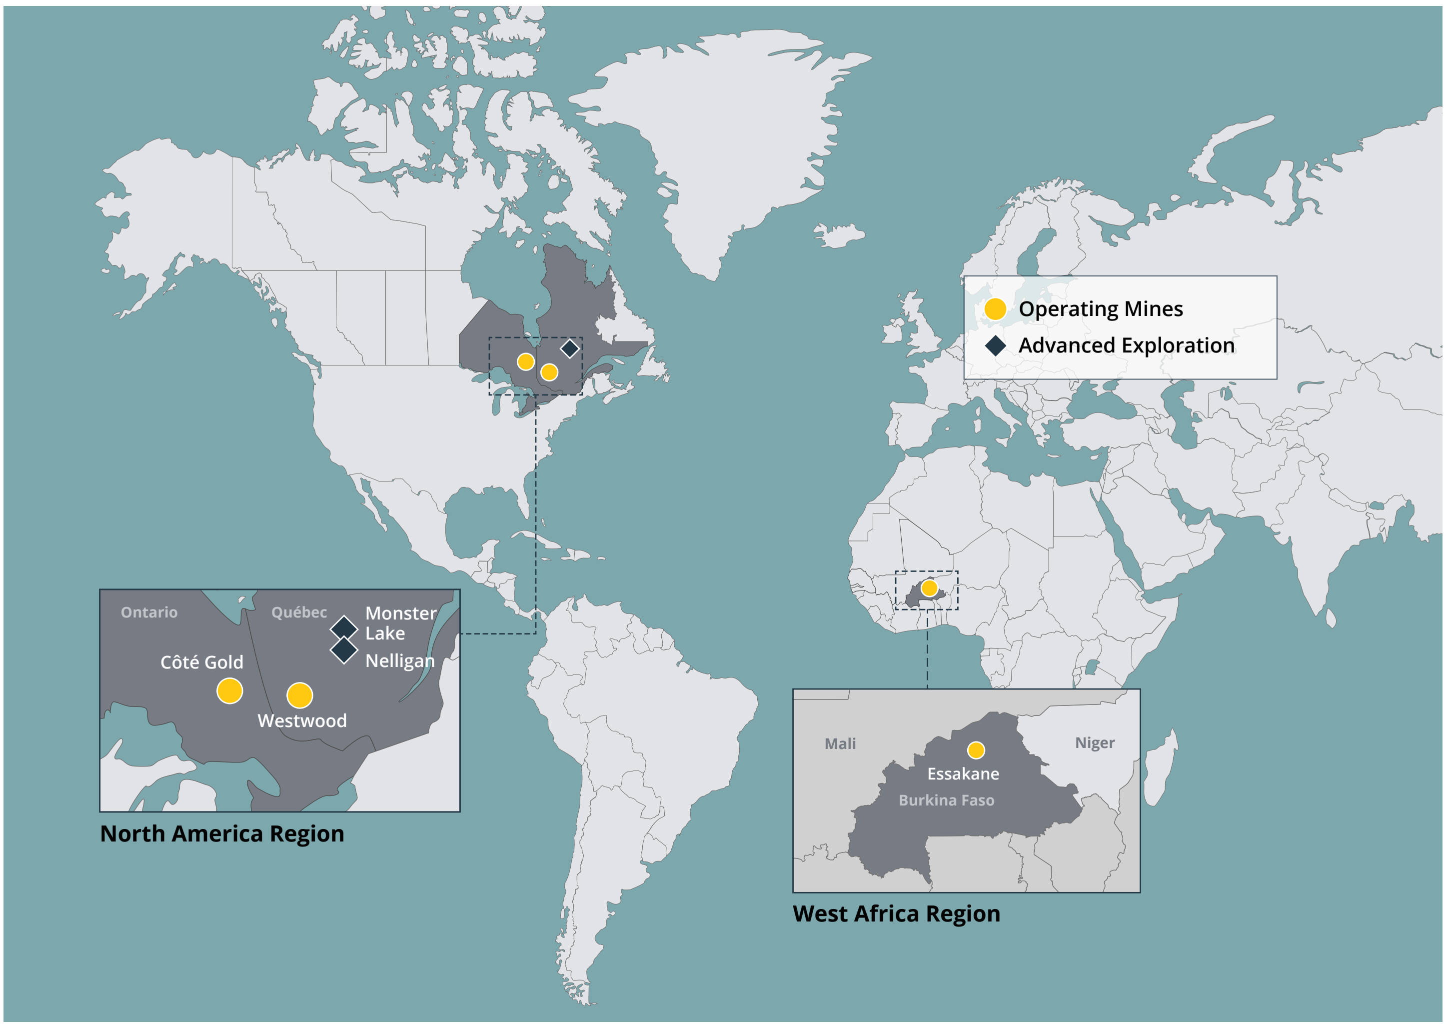
Contact Us

We welcome feedback on this report. If you have any comments or questions about this report, the contact point is our Senior Director of Decarbonization, Tyson Clinton. Please direct your feedback to www.iamgold.com/contact-us.

1 The total Scope 1 and 2 emissions initially reported in the 2023 Sustainability Report were 440,296 tCO_2e and have been updated to 453,038 tCO_2e. This adjustment reflects the verified changes in Scope 2 emissions.

About IAMGOLD

IAMGOLD is an intermediate gold producer and developer based in Canada with operating mines in North America and West Africa. The Company has commenced production at the large-scale, long life Côté Gold Mine in partnership with Sumitomo Metal Mining Co. Ltd., which is expected to be among the largest gold mines in Canada. In addition, the Company has an established portfolio of early stage and advanced exploration projects within high potential mining districts. IAMGOLD employs approximately 3,600 people and is committed to maintaining its culture of accountable mining through high standards of Environmental, Social and Governance practices, including its commitment to strive for the goal of Zero Harm®, in every aspect of its business. IAMGOLD is listed on the New York Stock Exchange (NYSE: IAG) and the Toronto Stock Exchange (TSX: IMG).



Scope 3 Emissions

Organizational Boundaries

An operational control approach was used to set the Scope 3 organizational boundaries, which is consistent with IAMGOLD's Scope 1 and 2 inventory for 2023. This approach includes all of IAMGOLD's Scope 3 emissions across:

Mine Sites
Côté Gold[2]
Westwood
Essakane

Corporate
Toronto office
Brossard office
Sudbury office
Ouagadougou offices
Corporate and investment activities

IAMGOLD's advanced exploration activities in Burkina Faso, Ontario, Quebec and Peru were considered but their Scope 3 emissions were deemed immaterial apart from Category 3: fuel- and energy-related activities not included in Scope 1 or Scope 2 emissions. Refer to the materiality table for a full list of Scope 3 categories.

IAMGOLD had operational control of the Rosebel Mine until January 31, 2023, before it was sold to Zijin Mining. Rosebel's GHG emissions data was not available for 2023, therefore no emissions from Rosebel were captured in IAMGOLD's 2023 Scope 1 and 2 inventory. As a result, the Scope 3 emissions for Rosebel in January 2023 were also not included in this screening. For the remainder of 2023, a portion of the emissions associated with Rosebel are captured in the Scope 3 assessment as an investment in Euro Resources under Category 15.

Materiality

In assessing materiality, IAMGOLD applied a threshold of +/-5%, in accordance with the GHG Protocol Corporate Standard.

Of the 15 categories included in the GHG Protocol, 11 of the 15 categories were assessed to be material.

Scope 3 Category	Materiality, Included/Excluded	Primary Methodology
Category 1: Purchased Goods and Services	Material, Included	Spend-based Method
Category 2: Capital Goods	Material, Included	Spend-based Method
Category 3: Fuel- and Energy-Related Activities Not Included in Scope 1 or Scope 2	Material, Included	Industry Average Mass-based Method
Category 4: Upstream Transportation and Distribution	Material, Included	Spend-based Method
Category 5: Waste Generated in Operations	Material, Included	Industry Average Mass-based Method
Category 6: Business Travel	Material, Included	Spend-based Method and Distance-based Method
Category 7: Employee Commuting	Material, Included	Industry Average Distance-based Method
Category 8: Upstream Leased Assets	Material, Included	Industry Average Floor Area-based Method and Spend-based Method
Category 9: Downstream Transportation and Distribution	Material, Included	Industry Average Distance-based Method
Category 10: Processing of Sold Products	Material, Included	Industry Average Mass-based Method
Category 11: Use of Sold Products	Immaterial, Excluded	Not Applicable
Category 12: End-of-Life Treatment of Sold Products	Immaterial, Excluded	Not Applicable
Category 13: Downstream Leased Assets	Not Applicable, Excluded	Not Applicable
Category 14: Franchises	Not Applicable, Excluded	Not Applicable
Category 15: Investments	Material, Included	Supplier Specific Method

2 Côté Gold was under construction in 2023 and entered production in 2024.

Scope 3 Emissions (continued)

Methodology

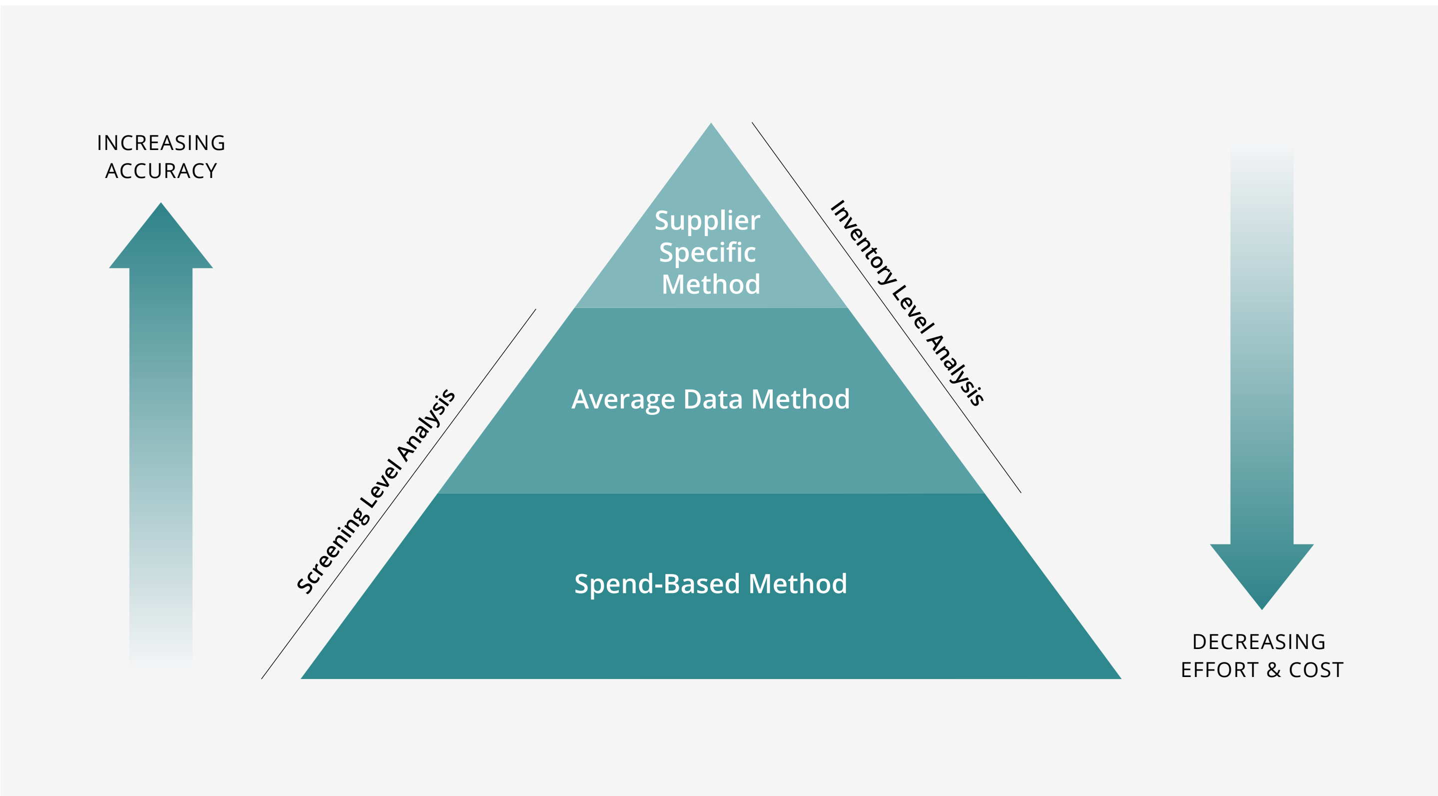
Calculation methods for Scope 3 analysis are categorized into three primary methods:

- **Supplier Specific Method:** Uses primary data such as physical metric data with cradle-to-gate emission factors from suppliers to calculate Scope 3 emissions. This method uses primary data and is considered to be the most accurate.
- **Average Data Method**: Uses physical metric data and industry average emission factors. This method leverages both cradle-to-gate and use phase emission factors and predominantly relies on secondary data.
- **Spend-Based Method:** Estimates Scope 3 emissions by applying spend-based emission factors to economic data for purchased goods and services. This method relies on secondary data and is typically used for initial screenings or when other data sources are unavailable.

For this screening, we employed a combination of these three methods based on available data; however, the majority of this screening was based on average data and spend-based methods. This is the most common practice for initial Scope 3 assessments and in our industry, due to the complexity of source data and the lack of available supplier emissions data, which should be acknowledged as providing less accurate data. As part of continual improvement, we aim to refine our methodologies to enhance the accuracy and precision of our emissions inventory for the future, where reasonable.

To calculate emissions, several sources were utilized to obtain emission factors, including:

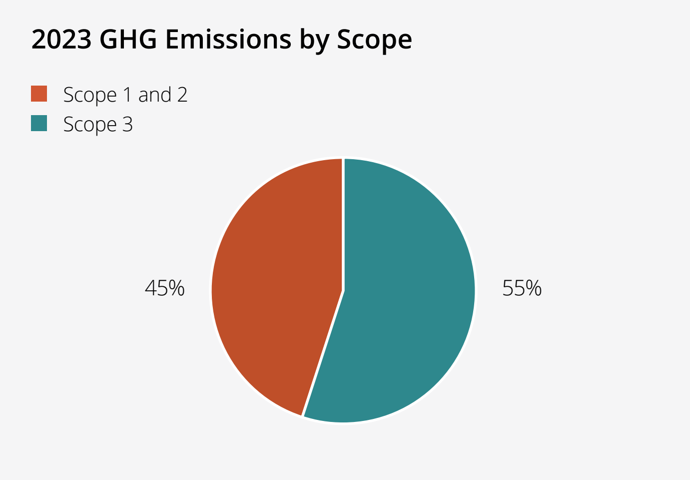
- US Environmental Protection Agency's (EPA) Supply Chain Greenhouse Gas Emission Factors for US Industries and Commodities v1.2
- Department for Environment Food & Rural Affairs' (DEFRA) UK Government Conversion Factors for Greenhouse Gas Reporting.



Scope 3 Emissions (continued)

Summary of Scope 3 Emissions

In 2023, IAMGOLD's Scope 3 emissions were estimated to be approximately 548,000 tCO_2e. Of IAMGOLD's total Scope 3 emissions, approximately 524,000 tCO_2e were attributed to mine sites, while approximately 24,000 tCO_2e were from corporate activities. In comparison, IAMGOLD's 2023 Scope 1 and 2 emissions totalled 453,038 tCO_2e.[3] Overall, IAMGOLD's Scope 3 emissions accounted for approximately 55% of the overall emissions across Scopes 1, 2 and 3. For additional information on our Scope 1 and 2 emissions, please see our 2023 Sustainability Report.



Scope 3 Category	Estimated Emissions (tCO_2e)
Category 1: Purchased Goods and Services	326,971
Category 2: Capital Goods	32,329
Category 3: Fuel- and Energy-Related Activities Not Included in Scope 1 or Scope 2	103,582
Category 4: Upstream Transportation and Distribution	43,102
Category 5: Waste Generated in Operations	18,055
Category 6: Business Travel	3,552
Category 7: Employee Commuting	3,122
Category 8: Upstream Leased Assets	372
Category 9: Downstream Transportation and Distribution	89
Category 10: Processing of Sold Products	31
Category 11: Use of Sold Products	Immaterial
Category 12: End-of-Life Treatment of Sold Products	Immaterial
Category 13: Downstream Leased Assets	Not applicable
Category 14: Franchises	Not applicable
Category 15: Investments	16,583
Total	**547,789**

3 The figure represents the updated total Scope 1 and 2 emissions following the third party verification.

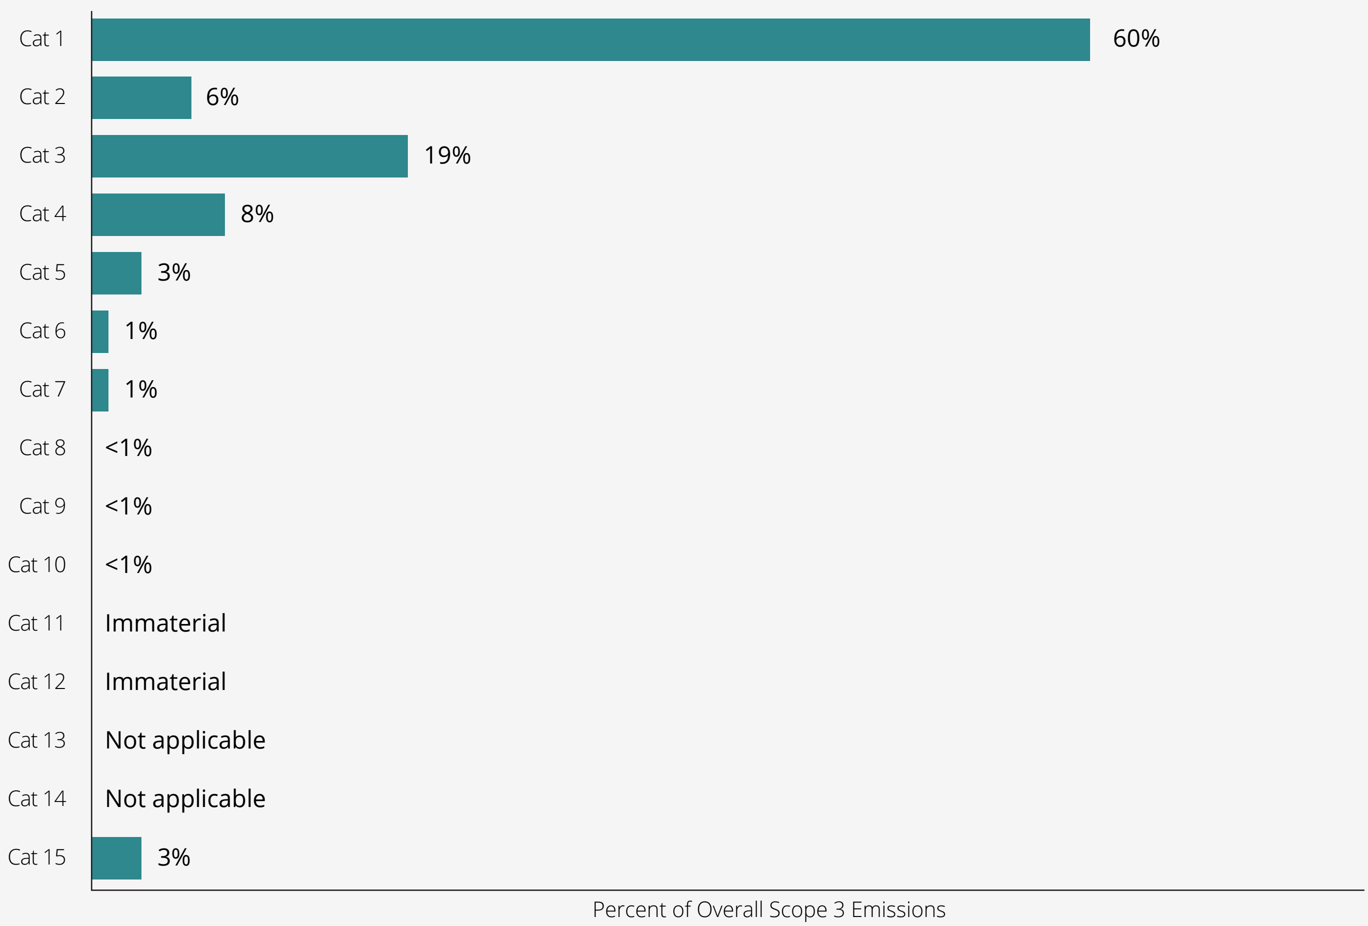
Scope 3 Emissions (continued)

The top five Scope 3 emissions categories for IAMGOLD included:

- Category 1: Purchased goods and services;
- Category 2: Capital goods;
- Category 3: Fuel- and energy-related activities not included in Scope 1 or Scope 2;
- Category 4: Upstream transportation and distribution; and
- Category 5: Waste generated in operations

For gold mining companies, Category 1 is usually the largest Scope 3 category. Gold generally also has lower downstream emissions compared to minerals like iron ore or zinc, as doré requires less processing and production volumes are much lower. Furthermore, typically there are no emissions produced during the usage of gold.

Scope 3 GHG Emissions by Category



Cautionary Statement on Forward-looking Information

All information included or incorporated by reference in this report, including any information as to IAMGOLD's vision, strategy, future financial or operating performance and other statements that express management's expectations or estimates of future performance or impact, including statements in respect of the prospects and/or development of IAMGOLD's projects, other than statements of historical fact, constitutes forward-looking information or forward-looking statements within the meaning of applicable securities laws (collectively referred to herein as "forward-looking statements") and such forward-looking statements are based on expectations, estimates and projections as of the date of this report. Forward-looking statements are generally identifiable by the use of words such as "may", "will", "should", "would", "could", "continue", "expect", "budget", "aim", "can", "focus", "forecast", "anticipate", "estimate", "believe", "intend", "plan", "schedule", "guidance", "outlook", "potential", "seek", "targets", "cover", "strategy", "during", "ongoing", "strive", "subject to", "future", "objectives", "opportunities", "committed", "prospective", "likely", "progress", "sustain", "effort", "extend", "remain", "pursue", "predict" or "project" or the negative of these words or other variations on these words or comparable terminology. For example, forward-looking statements in this report include, without limitation, those under the headings "About This Report", "About IAMGOLD", "Scope 3 Emissions", and include, but are not limited to, statements with respect to: IAMGOLD internal policies and practices; corporate governance and operational oversight; sustainability-related targets, goals, strategies, training, risk-assessments and commitments; future performance of IAMGOLD's mines; development and commencement of commercial production at the Côté Gold mine; external assurance of climate metrics; climate-related targets; health, safety and wellness policies, commitments, and processes; equity, diversity and inclusion initiatives and targets; usage of autonomous equipment; life of mines; development of exploration sites; adoption of proposed regulations and standards; government regulation of mining operations (including the *Competition Act* and the regulations associated with the fight against climate change); relations and initiatives with host communities and indigenous groups; human rights and security initiatives; stakeholder engagement; employee recruitment, compensation and training; risk management and auditing activities; cybersecurity review; supply chain initiatives; labour practices; due diligence processes; environmental remediation; mine closure and reclamation activities; decarbonization and greenhouse-gas targets and initiatives; water management framework and activities; tailings facility construction and management; and biodiversity initiatives and management.

IAMGOLD cautions the reader that forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by management, are inherently subject to significant business, financial, operational and other risks, uncertainties, contingencies and other factors, including those described below, which could cause actual results, performance or achievements of IAMGOLD to be materially different from results, performance or achievements expressed or implied by such forward-looking statements and, as such, undue reliance must not be placed on them. Forward-looking statements are also based on numerous material factors and assumptions, including as described in this report, including with respect to: IAMGOLD's present and future business strategies; operations performance within expected ranges; anticipated future production and cash flows; local and global economic conditions and the environment in which IAMGOLD will operate in the future; the price of precious metals, other minerals and key commodities; projected mineral grades; international exchanges rates; anticipated capital and operating costs; the availability and timing of required governmental and other approvals for the construction of IAMGOLD's projects.

Risks, uncertainties, contingencies and other factors that could cause actual results, performance or achievements of IAMGOLD to be materially different from results, performance or achievements expressed or implied by such forward-looking statements include, without limitation: the ability of IAMGOLD to successfully complete the construction and commissioning of Côté Gold and commence commercial production from the mine; ramp-up assumptions and other project metrics including operating costs in respect to the Côté Gold mine; expected production of the Côté Gold mine, expected benefits from the operational improvements and de-risking strategies implemented or to be implemented by the Company; mine development activities; IAMGOLD's business strategies and its ability to execute thereon; the ability of IAMGOLD to complete pending transactions; security risks, including civil unrest, war or terrorism and disruptions to IAMGOLD's supply chain as a result of such security risks, particularly in Burkina Faso and the Sahel region surrounding IAMGOLD's Essakane mine; the availability of labour and qualified contractors; the availability of key inputs for IAMGOLD's operations and disruptions in global supply chains; the volatility of IAMGOLD's securities; litigation; contests over title to properties, particularly title to undeveloped properties; mine closure and rehabilitation risks; management of certain of IAMGOLD's assets by other companies or joint venture partners; the lack of availability of insurance covering all of the risks associated with a mining company's operations; unexpected geological conditions; competition and consolidation in the mining sector; the profitability of IAMGOLD being highly dependent on the condition and results of the mining industry as a whole, and the gold mining industry in particular; changes in the global prices for gold, and commodities used in the operation of IAMGOLD's business (including but not limited to diesel, fuel oil and electricity); inflation, including global inflation and inflationary pressures; legal, litigation, legislative, political or economic risks and new developments in the jurisdictions in which IAMGOLD carries on business; changes in taxes, including mining tax regimes; the failure to obtain in a timely manner from authorities key permits, authorizations or approvals necessary for transactions, exploration, development or operation, operating or technical difficulties in connection with mining or development activities, including geotechnical difficulties and major equipment failure; the availability of capital; the level of liquidity and capital resources; access to capital markets and

Cautionary Statement on Forward-looking Information (continued)

financing; IAMGOLD's level of indebtedness; IAMGOLD's ability to satisfy covenants under its credit facilities; changes in interest rates; adverse changes in IAMGOLD's credit rating; IAMGOLD's choices in capital allocation; effectiveness of IAMGOLD's ongoing cost containment efforts; IAMGOLD's ability to execute on de-risking activities and measures to improve operations; availability of specific assets to meet contractual obligations; risks related to third-party contractors, including reduced control over aspects of IAMGOLD's operations and/or the failure and/or the effectiveness of contractors to perform; changes in U.S. dollar and other currency exchange rates or gold lease rates; capital and currency controls in foreign jurisdictions; assessment of carrying values for IAMGOLD's assets, including the ongoing potential for material impairment and/or write-downs of such assets; the speculative nature of exploration and development, including the risks of diminishing quantities or grades of reserves; the fact that reserves and resources, expected metallurgical recoveries, capital and operating costs are estimates which may require revision; the presence of unfavourable content in ore deposits, including clay and coarse gold; inaccuracies in life of mine plans; failure to meet operational targets; equipment malfunctions; information systems security threats and cybersecurity; laws and regulations governing the protection of the environment (including greenhouse gas emission reduction and other decarbonization requirements and the uncertainty surrounding the interpretation of omnibus Bill C-59 and the related amendments to the *Competition Act* (Canada)); employee relations and labour disputes; the maintenance of tailings storage facilities and the potential for a major spill or failure of the tailings facilities due to uncontrollable events, lack of reliable infrastructure, including access to roads, bridges, power sources and water supplies; seismic activities; physical and regulatory risks related to climate change; unpredictable weather patterns and challenging weather conditions at mine sites; disruptions from weather related events resulting in limited or no productivity such as forest fires, flooding, heavy snowfall, poor air quality, and extreme heat or cold; attraction and retention of key employees and other qualified personnel; availability and increasing costs associated with mining inputs and labour, negotiations with respect to new, reasonable collective labour agreements may not be agreed to; the ability of contractors to timely complete projects on acceptable terms; the relationship with the communities surrounding IAMGOLD's operations and projects; indigenous rights or claims; illegal mining; the potential direct or indirect operational impacts resulting from external factors, including infectious diseases, pandemics, or other public health emergencies; and the inherent risks involved in the exploration, development and mining business generally.

Please see IAMGOLD's AIF or Form 40-F available on www.sedarplus.ca or www.sec.gov/edgar.shtml for a comprehensive discussion of the risks faced by IAMGOLD and which may cause actual results, performance or achievements of IAMGOLD to be materially different from results, performance or achievements expressed or implied by forward-looking statements.

Although IAMGOLD has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking statements, there may be other factors that cause results not to be as anticipated, estimated or intended. IAMGOLD disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise except as required by applicable law.
