

C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

Established in 1957, Agnico Eagle is a Canadian mining company that operates in Canada, Australia, Finland, and Mexico, primarily producing gold. Our GHG emissions inventory is primarily constituted by scope 1 and 2 emissions originating from fuel and energy management at our mining sites. Scope 3 emissions, meanwhile, stem from our entire value chain, encompassing products such as gold dore, copper, and zinc concentrates. For the past three years, we have been rigorously monitoring these emissions, using the gathered data to strategically manage our carbon footprint, thereby reinforcing our dedication to mitigating our environmental impact. The consistent execution of our business strategy forms the foundation of our response to potential climate-related risks and opportunities. This strategic approach was highlighted in 2017 when we introduced our Energy and Greenhouse Gas Management Strategy. This strategy committed us to sustainable energy cost reductions and efficiency improvements, a reduced carbon footprint, and the integration of climate adaptation measures across all operational aspects. Our approach is underpinned by three pillars: Performance, Pipeline, and People. This tri-pillar strategy allows Agnico Eagle to manage climate-related risks and opportunities, reduce our GHG emissions, build capacity, and proactively address climate change while enhancing operational resilience. By implementing these measures, we aim not only to mitigate our risks but also to bolster our business.

C0.2

(C0.2) State the start and end date of the year for which you are reporting data and indicate whether you will be providing emissions data for past reporting years.

Reporting year

Start date

January 1 2022

End date

December 31 2022

Indicate if you are providing emissions data for past reporting years

Yes

Select the number of past reporting years you will be providing Scope 1 emissions data for

3 years

Select the number of past reporting years you will be providing Scope 2 emissions data for

3 years

Select the number of past reporting years you will be providing Scope 3 emissions data for

2 years

C0.3

(C0.3) Select the countries/areas in which you operate.

Yes, a Ticker symbol	TSX:AEM
Yes, a Ticker symbol	NYSE:AEM

C1. Governance

C1.1

(C1.1) Is there board-level oversight of climate-related issues within your organization?

Yes

C1.1a

(C1.1a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.

Position of individual or committee	Responsibilities for climate-related issues
Board-level committee	Agnico Eagle's Board Committee on Health, Safety, Environment, and Sustainable Development (HSESD) supervises our strategies, policies, programs, and performance in areas of health, safety, environmental stewardship, and corporate social responsibility, including the monitoring and reviewing of climate change-related risks and opportunities. On the governance structure, this committee reports to the Board of Directors. This Committee receives climate-related updates at every quarterly board meeting. In addition, they assist our executive management team by ensuring the necessary resources are in place to meet sustainability goals and elevate our environmental, social, and governance (ESG) leadership. The Committee regularly reviews key climate-related metrics such as Scope 1 and 2 GHG emissions, emission intensity, and electricity intensity. to help monitor our goals/targets. They also stay abreast of relevant climate-related developments, like changes in carbon regulations, which are presented as and when needed. In 2021, the Board of Directors gave their approval to Agnico Eagle's commitment to achieve net zero emissions by 2050 and formally declared support for the Task Force on Climate-related Financial Disclosures (TCFD).

C1.1b

(C1.1b) Provide further details on the board's oversight of climate-related issues.

Frequency with which climate-related issues are a scheduled agenda item	Governance mechanisms into which climate-related issues are integrated	Scope of board-level oversight	Please explain
Scheduled – all meetings	Reviewing and guiding annual budgets Overseeing and guiding employee incentives Reviewing and guiding strategy Monitoring the implementation of a transition plan Overseeing the setting of corporate targets Monitoring progress towards corporate targets Overseeing value chain engagement Reviewing and guiding the risk management process	<Not Applicable>	In 2021, the responsibility of overseeing climate-related matters was officially added to the charter of the Health, Safety, Environment, and Sustainable Development (HSESD) Committee at Agnico Eagle. The Committee, in line with our Sustainable Development Policy, provides advice and recommendations to the Board of Directors in its oversight role related to health and safety, environmental (including climate-related), and corporate social responsibility strategies, policies, programs, and performance. One of the main responsibilities of the HSESD Committee is to monitor and review climate change-related risks and opportunities. The Committee carries out quarterly and annual reviews of management reports on health and safety, environment, and sustainability, which include climate-related reports. Metrics relevant to climate, including Scope 1 and 2 GHG emissions, emission intensity, and electricity intensity, are reported to the Committee every quarter. Additionally, any changes to carbon regulations or other climate-related issues are brought to the Committee's attention on an "as-needed" basis.

C1.1d

(C1.1d) Does your organization have at least one board member with competence on climate-related issues?

	Board member(s) have competence on climate-related issues	Criteria used to assess competence of board member(s) on climate-related issues	Primary reason for no board-level competence on climate-related issues	Explain why your organization does not have at least one board member with competence on climate-related issues and any plans to address board-level competence in the future
Row 1	Yes	The first criterion used to assess the competence of board members on climate-related issues is their prior professional experience in a climate-related topic, such as decarbonization. A second criterion is the prior experience of board members in advising, making recommendations on, reviewing, or guiding climate-related strategies, policies, programs, and performance. At Agnico Eagle, we have a board member with experience identifying and addressing opportunities for reducing energy consumption in the mining sector and improving environmental footprints. We have another board member with experience that intersects politics, strategy, community development, responsible and sustainable development, environmental protection, and incorporating traditional knowledge with significant responsibility for environmental, including climate, matters. This board member's prior experience includes acting as Minister of Environment, which included responsibility for Environment Canada and the Canadian Environmental Assessment Agency. This board member also served as Chair of the Arctic Council with a focus on sustainable development and Arctic environmental protection. Additionally, in July 2021 there was a Director Education Session that included presentations on the Company's ESG practices and Climate Change policy. All directors attended.	<Not Applicable>	<Not Applicable>

C1.2

(C1.2) Provide the highest management-level position(s) or committee(s) with responsibility for climate-related issues.

Position or committee

Other C-Suite Officer, please specify (Executive Vice-President, Operational Excellence)

Climate-related responsibilities of this position

Climate-related responsibilities of this position

Assessing climate-related risks and opportunities
Managing climate-related risks and opportunities

Coverage of responsibilities

<Not Applicable>

Reporting line

Reports to the board directly

Frequency of reporting to the board on climate-related issues via this reporting line

Quarterly

Please explain

The Steering Committee on Climate-related Risks and Opportunities, responsible for suggesting the company's strategic climate-related vision, convenes at least once every quarter. After securing board approval for their proposals, they guide the Climate Change Working Group and individual sites toward realizing this vision, while also offering guidance on decarbonization and the management of climate-related risks and opportunities.

The Climate Change Working Group, comprised of representatives from various departments like Finance, Procurement, Sustainability, Maintenance, Investor Relations, Business Strategy, and Technical Services, is tasked with formulating a strategic plan for decarbonization and climate resilience. In addition to providing technical guidance to the sites and technical teams, this group works on integrating and harmonizing climate-related initiatives across the company.

Monitoring of climate-related issues is carried out through multiple channels. These include regular reporting from business units on GHG emissions, energy consumption, and GHG reduction initiatives; updates on relevant climate-related topics such as changes to carbon regulations as required; and reports from the Corporate Climate Working Group and Climate Action Team to the Climate-related Risk Management Steering Committee.

C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

	Provide incentives for the management of climate-related issues	Comment
Row 1	Yes	Short-term Incentive Plan (STIP) compensation for the Named Executive Officers is broadly based on the Company's three pillars: people, performance, and pipeline. For the year ended December 31, 2022, 25% of the short-term incentive plan was linked to sustainability performance, including climate-related matters. Within the 'Corporate Performance Factor' of the STIP, 10% is for ESG matters. The ESG factor is assessed against both (i) objective targets and measures of key indices (including third-party rankings), and (ii) through judgement-based analysis considering important initiatives/actions in areas more relevant to the Company's situation and operating environments.

C1.3a

(C1.3a) Provide further details on the incentives provided for the management of climate-related issues (do not include the names of individuals).

Entitled to incentive

Chief Executive Officer (CEO)

Type of incentive

Monetary reward

Incentive(s)

Bonus - % of salary

Performance indicator(s)

Company performance against a climate-related sustainability index (e.g., DJSI, CDP Climate Change score etc.)

Other (please specify) (The ESG factor is assessed against both (i) objective targets and measures of key indices (including third-party rankings), and (ii) through judgement-based analysis considering important initiatives/actions)

Incentive plan(s) this incentive is linked to

Short-Term Incentive Plan

Further details of incentive(s)

Under the ESG factor, the following key indices, including 3rd party rankings, are used:

- (1) All of Agnico Eagle's mines demonstrate the application of good practices in ESG matters through the application of Mining Association of Canada's Towards Sustainable mining protocols as a means to align operations and to demonstrate our good practices on ESG matters
- (2) Agnico Eagle continued its commitment to a number of best-in-class governance initiatives, and external verification audits of ESG programs.
- (3) Agnico Eagle tracks its performance against several key measurable indices, both environmental (including GHG Emissions, Fresh Water Intensity, Total Waste, and Tailings) as well as social and Agnico Eagle's performance in each of these objective measures is, or is close to, best-in-class, and this performance has been recognized both in awards received (including winning the 2021 TSM Community Engagement Excellence Award from MAC) and in ratings by independent ESG research agencies

Judgment-based analysis and other considerations included:

- (1) addressing investor interest in ESG matters through increased disclosure of ESG policies and technical details and through direct investor engagement.
- (2) In 2021, Agnico Eagle announced a Net Zero Carbon by 2050 target. We continue to advance in a prudent manner with respect to developing and disclosing plans to achieve this target.
- (3) In 2021, Agnico Eagle implemented a governance model for managing climate change, committed to supporting the recommendations of the TCFD commenced climate-related risk assessments and disclosed Scope 3 GHG emissions for the first time.
- (4) Several of Agnico Eagle's operations worked to achieve increased operational flexibility for tailings and water management such as with the large, multi-year projects at Kittila and LaRonde.
- (5) In 2021, three key corporate standards were updated and communicated internally (i) The risk assessment methodology was updated in the Tailings Management Standard; (ii) a stand-alone Water Management Policy and a Corporate Standard were developed, and (iii) a Corporate Standard on Environmental Incident Management was issued with the goal of providing more clarity and consistency for the reporting and follow-up of environmental incidents associated with spills, dust events, noise, vibration exceedances and non-compliances.

Explain how this incentive contributes to the implementation of your organization's climate commitments and/or climate transition plan

Our incentive system actively promotes the implementation of our organization's climate commitments and transition plans. By tying individual and operational performance to compensation, we encourage all employees to focus on achieving our environmental goals. Specifically, a quarter of our Executive Officers' short-term bonuses in 2021 were connected to sustainability performance, creating a strong incentive at the highest levels of leadership to prioritize this aspect.

From 2022 onwards, we've made emission reduction targets and consideration of climate risk and opportunities integral parts of our compensation framework. This means that achieving our climate commitments isn't just an organizational goal, but directly impacts the remuneration of our employees. This incentivizes everyone, especially our leaders, to actively work towards our climate transition plan, fostering a company-wide commitment to sustainability.

This incentivizes everyone, especially our leaders, to actively work towards our climate transition plan, fostering a company-wide commitment to sustainability.

C2. Risks and opportunities

C2.1

(C2.1) Does your organization have a process for identifying, assessing, and responding to climate-related risks and opportunities?

Yes

C2.1a

(C2.1a) How does your organization define short-, medium- and long-term time horizons?

	From (years)	To (years)	Comment
Short-term	1	3	
Medium-term	3	15	
Long-term	15	100	Long-term: Defined as Years 15 to 115

C2.1b

(C2.1b) How does your organization define substantive financial or strategic impact on your business?

Our organization defines a substantive financial on our business as significant changes in the revenue, expenditure, assets & liabilities, and capital & financing that could affect our strategic direction, bottom line, or stakeholder relations. We use a risk scale from 1 (Negligible Risk) to 5 (Extreme/Critical Risk) to quantify these impacts:

1. Negligible Risk (Rank 1) is defined as less than 1% loss in production or earnings, less than \$5M in expenditure within 12 months, negligible changes in joint venture revenue or debt levels, and negligible changes in borrowing capacity or investor exit.
2. Minor Risk (Rank 2) refers to 1-5% loss in production or earnings, \$5M-\$10M in expenditure within 12 months, minor changes in joint venture revenue or debt levels, and minor changes in borrowing capacity or investor exit.
3. Moderate Risk (Rank 3) is characterized by 10-20% loss in production or earnings, \$10M-\$50M in expenditure within 12 months, moderate changes in joint venture revenue or debt levels, and moderate changes in borrowing capacity or investor exit.
4. Major Risk (Rank 4) involves 20-30% loss in production or earnings, \$50M-\$500M in expenditure within 12 months, 20-30% changes in joint venture revenue or debt levels, and 20-30% changes in borrowing capacity or significant investor exit.
5. Extreme/Critical Risk (Rank 5) is defined by more than 30% loss in production or earnings, more than \$500M in expenditure within 12 months, more than 30% changes in joint venture revenue or debt levels, and more than 30% changes in borrowing capacity, a significant investor exit, or a more than 30% drop in share price.

In identifying and assessing climate-related risks, we apply these definitions and thresholds to identify impacts that could substantially affect our financial and strategic position.

C2.2

(C2.2) Describe your process(es) for identifying, assessing and responding to climate-related risks and opportunities.

Value chain stage(s) covered

Direct operations

Risk management process

Integrated into multi-disciplinary company-wide risk management process

Medium-term

Long-term

Description of process

Agnico Eagle identifies, assesses, and manages risks using our Risk Management and Monitoring System (RMMS). RMMS is the foundation for managing the commitments made in our Sustainable Development Policy and under the international initiatives, principles, codes, and programs to which we are a signatory.

When assessing climate-related risks and opportunities, we utilize matrices that rate risk on the bases of "Probability" and "Consequence" in a 5x5 matrix. Risks with a score of 12 or higher were identified as potential foreseeable climate-related risks. In 2021 we developed a climate risk and opportunities register, which is integrated into our RMMS risk assessment process. Our process includes criteria for land use, water, environmental regulatory compliance, human rights, social acceptability, and reputational impact that may indirectly cover some climate-related risks such as regulatory emission reporting requirements. Our climate change working group developed a set of consequence criteria specific to climate-related risks, incorporating financial and pipeline/growth consequences. We have updated our matrices to include forward-looking probability definitions as well as incorporating judgments of the speed of onset for some climate-related risks. Risk assessments have been completed at all operations for the tailings and water storage facilities and several sites included effects of climate change.

In 2022, we employed scenario planning to map out potential climate risks and opportunities under different futures, aligning with the TCFD framework. These scenarios offered four outcomes with varying levels of transition and physical risks.

For 2023, we plan to use these scenarios to update our corporate-level transition risk register and to model the potential impacts of various climate scenarios on our company's valuation. We also aim to add more detail to these risks by conducting a site-level transition risk assessment with the intent to integrate the findings into our RMMS and climate risk register.

C2.2a

(C2.2a) Which risk types are considered in your organization's climate-related risk assessments?

	Relevance & inclusion	Please explain
Current regulation	Relevant, always included	Agnico Eagle's RMMS includes assessments of operations' risks of non-compliance with laws and regulations, this includes any climate-related laws and regulations. For example, Agnico Eagle's Canadian operations are subject to regulatory emissions reporting requirements.
Emerging regulation	Relevant, sometimes included	Global efforts to transition to a lower-carbon economy may entail extensive policy, legal, technology, and market changes to address mitigation and adaptation requirements related to climate change. Depending on the nature, speed, focus and jurisdiction of these changes, transition risks may pose varying levels of financial and reputational risk to the business.
Technology	Relevant, sometimes included	Global efforts to transition to a lower-carbon economy may entail extensive policy, legal, technology, and market changes to address mitigation and adaptation requirements related to climate change. Depending on the nature, speed, focus and jurisdiction of these changes, transition risks may pose varying levels of financial and reputational risk to the business. Increasing the proportion of non-carbon emitting electricity sources is critical for Agnico Eagle to meet our long term energy and GHG objectives. In 2020, we were encouraged to see multi-stakeholder collaboration on a proposed hydro and broadband transmission line project which would connect the Kivalliq region in Nunavut to the province of Manitoba. The project is still in the very early stages of the development process and we continue work with local stakeholders in the north to find innovative, alternative-energy solutions in reducing our carbon footprint. In Mexico, we have received the necessary permits to begin construction of a power line that would bring electrical power supply to La India mine and reduce our fuel consumption. Construction is expected to begin when the situation around COVID-19 has improved.
Legal	Relevant, always included	Agnico Eagle's RMMS includes assessments of operations' risks of non-compliance with laws and regulations, this includes any climate-related laws and regulations. For example, Agnico Eagle's Canadian mines operate in jurisdictions with carbon tax laws.
Market	Relevant, sometimes included	Global efforts to transition to a lower-carbon economy may entail extensive policy, legal, technology, and market changes to address mitigation and adaptation requirements related to climate change. Depending on the nature, speed, focus and jurisdiction of these changes, transition risks may pose varying levels of financial and reputational risk to the business.
Reputation	Relevant, always included	Agnico Eagle's RMMS includes assessments of social acceptability by stakeholders and reputational impact, which may indirectly cover some climate-related risks at the operational level. Additionally, action on climate change is an import issue identified by investors. In 2020, in response to requests from stakeholders and as part of our climate action journey we stated to align our reporting on climate change with the recommendations of TCFD.
Acute physical	Relevant, sometimes included	Agnico Eagle's RMMS includes assessments of land use and water-related risks, which may indirectly cover some climate-related risks. Additionally, assessments for several sites' tailings and water storage facilities, included effects of climate change, for a complete list sites consult our 2021 Tailings Summary Report available on our website.
Chronic physical	Relevant, sometimes included	Assessments for several sites tailings and water storage facilities, included effects of climate change, for a complete list sites consult our 2021 Tailings Summary Report available on our website.

C2.3

Direct operations

Risk type & Primary climate-related risk driver

Emerging regulation	Carbon pricing mechanisms
---------------------	---------------------------

Primary potential financial impact

Increased direct costs

Climate risk type mapped to traditional financial services industry risk classification

<Not Applicable>

Company-specific description

The Company operates in jurisdictions where regulatory requirements have taken effect to monitor, report, and/or reduce greenhouse gas emissions. Increasing regulation and regulatory uncertainty regarding greenhouse gas emissions and climate change issues may adversely affect the Company's operations. Costs to comply with current and future regulations are difficult to predict. While the evolving regulatory requirements in respect of greenhouse gases and the additional costs required to comply are not expected to have a material adverse effect on the Company's operations, such requirements may be amended or may have unexpected effects on the Company and, as a result, may have a material adverse effect on the Company's financial performance and its results of operations.

In 2023, we conducted a site-level transition risk assessment to update our climate risk register. This assessment will assist us in further identifying ways to reduce emissions.

Company-specific description

Increasing prices of carbon-intensive fossil fuels or commodities, such as diesel, can pose a risk to operations. The consequences can include an increase in operational costs, of which fuel is a large component. This risk can also impact local communities and employees of Agnico Eagle, independent of our operations. We are exploring opportunities for cleaner fuel options and electrification.

Additionally, an increase in the costs of products /services could result in switching to alternate supply sources or product substitution. We plan to engage with suppliers on climate change risks.

Company-specific description

In 2023, we conducted a transition risk assessment at all of our sites. It became evident that the evolving policies and regulations provide a significant opportunity for us to adopt clean technologies in our operations. This strategic move not only aligns with our environmental objectives but also allows us to mitigate the risk of rising operational costs due to increasing carbon taxes.

At Agnico Eagle, we've been on a green journey since 2011, consistently integrating new technologies into our daily operations. Our primary aim is to reduce our reliance on fossil fuels while adopting more eco-friendly solutions as part of our climate action strategy. Our efforts are particularly focused on electrification and utilizing alternative, sustainable fuels. One of the major elements of our climate strategy involves broadening the use of Battery Electric Vehicles (BEVs) wherever we have access to clean energy. This tactic is critical to our ambitious goal of reaching Net-Zero emissions by 2050, with a milestone target of a 30% reduction by 2030.

To illustrate our proactive actions, we've already incorporated 6 electric trucks and 22 electric scoops at some of our locations. We've completed theoretical studies on an autonomous haulage system and have begun implementing a Trolley-Assist Haulage program for our haulage fleet. In 2021, we also started trialing two of the first Sandvik Battery Electric Loaders.

Where in the value chain does the opportunity occur?

Direct operations

Opportunity type

Energy source

Primary climate-related opportunity driver

Shift toward decentralized energy generation

Primary potential financial impact

Reduced indirect (operating) costs

Company-specific description

In 2023, we carried out a transition risk assessment across all of our sites and completed our annual corporate carbon accounting. The results underscored how shifting policies and regulations create considerable opportunities for us to not only adopt clean technologies but also to leverage renewable energy at our sites either through investment in projects or a Renewable Power Purchase agreement. The latter will substantially reduce our scope 2 emissions, as highlighted by our carbon accounting. Adopting this strategy does more than align with our environmental objectives; it also helps us to mitigate the risk of escalating operational costs caused by increasing carbon taxes and the forthcoming plans of countries considering the Carbon Border Adjustment Mechanism (CBAM).

In recent years, in line with our efforts to decarbonize our operations and carve a path towards net-zero emissions, our engagement with renewable energy solutions has seen a marked increase. Our strategy is collaborative. We work closely with governments and communities in the regions we operate to identify viable projects, push them forward, and nurture the understanding needed to implement clean and renewable energy at our sites.

Products and services

Primary climate-related opportunity driver

Other, please specify (Practice of procuring goods and services from suppliers who prioritize and demonstrate sustainable practices)

Primary potential financial impact

Reduced indirect (operating) costs

Company-specific description

In 2023, we undertook a transition risk assessment across all our sites. We found that the changing landscape of policies and regulations presents a significant opportunity for us to align our climate standards with our suppliers. This strategic move serves dual purposes: it not only helps us meet our environmental goals but also mitigates the risk of escalating operational costs due to rising carbon taxes. Our greenhouse gas (GHG) protocol-aligned carbon accounting has shown that scope 3 emissions, which come from our supply chain, are our largest source of emissions. By aligning with our suppliers, we can significantly reduce these.

Moreover, our climate steering committee has a crucial responsibility: to develop a mechanism that raises awareness about climate action and promotes emission reporting throughout our supply chain. We've made substantial progress in this area by updating our procurement website, refining our supplier code of conduct, and implementing our community engagement strategy. This reinforces our commitment to climate action and encourages our partners to share in our environmental goals.

C3. Business Strategy

C3.1

(C3.1) Does your organization's strategy include a climate transition plan that aligns with a 1.5°C world?

Row 1

Climate transition plan

No, but our strategy has been influenced by climate-related risks and opportunities, and we are developing a climate transition plan within two years

Publicly available climate transition plan

<Not Applicable>

Mechanism by which feedback is collected from shareholders on your climate transition plan

<Not Applicable>

Description of feedback mechanism

<Not Applicable>

Frequency of feedback collection

<Not Applicable>

Attach any relevant documents which detail your climate transition plan (optional)

<Not Applicable>

Explain why your organization does not have a climate transition plan that aligns with a 1.5°C world and any plans to develop one in the future

In 2022, we remained steadfast in our commitment to reaching Net Zero Carbon emissions by 2050, and we also set an interim target of a 30% reduction by 2030. We are meticulously working on developing and sharing comprehensive plans to meet these targets. Within the next two years, we plan to finalize and disclose a transition plan that lays out specific actions and initiatives we will take to reach our net zero 2050 target.

Explain why climate-related risks and opportunities have not influenced your strategy

<Not Applicable>

C3.2

(C3.2) Does your organization use climate-related scenario analysis to inform its strategy?

	Use of climate-related scenario analysis to inform strategy	Primary reason why your organization does not use climate-related scenario analysis to inform its strategy	Explain why your organization does not use climate-related scenario analysis to inform its strategy and any plans to use it in the future
Row 1	Yes, qualitative and quantitative	<Not Applicable>	<Not Applicable>

C3.2a

(C3.2a) Provide details of your organization's use of climate-related scenario analysis.

Climate-related scenario		Scenario analysis coverage	Temperature alignment of scenario	Parameters, assumptions, analytical choices
Transition scenarios	Customized publicly available transition scenario	Company-wide	1.5°C	Reference scenarios were selected based on scenarios developed by the IPCC and the International Institute for Applied Systems Analysis (IIASA). This scenario is "Net Zero 2050" which aims to evaluate if our organization is strategically aligned with the goals and targets set forth by the Paris Agreement. It also assesses whether Agnico Eagle is adequately prepared to withstand significant transition risks. The scenario considers a broad spectrum of transition risks in the context of an orderly, systematic shift towards a low-carbon economy. While the exposure to physical risks is low due to current levels of locked-in climate change, it is not entirely absent. This scenario is founded on SSP 1 and RCP 1.9 (Representative Concentration Pathways), making it consistent with the TCFD expectations for a 1.5°C scenario. Hence, it serves as a comprehensive test of our alignment and preparedness for the realities of climate change and the transition to a more sustainable future.
Transition scenarios	Customized publicly available transition scenario	Company-wide	2.1°C - 3°C	Reference scenarios were selected based on scenarios developed by the IPCC and the International Institute for Applied Systems Analysis (IIASA). This scenario is "Delayed Transition" which is crafted to evaluate whether our organization is well-equipped to navigate a tumultuous and uncoordinated socio-political landscape, while also managing moderate levels of physical risks. It takes into account the transition risks that could emerge from a disorderly transition, creating a climate of uncertainty and instability for businesses. In contrast to the Net-Zero 2050 scenario, this situation sees heightened physical risks due to a slower overall transition. Building upon SSP 4 and RCP 3.4, this scenario projects a global average temperature rise of 2 - 3°C by the year 2100. Thus, it tests our organization's resilience and adaptability in a less-than-ideal climate transition scenario.
Transition scenarios	Customized publicly available transition scenario	Company-wide	2.1°C - 3°C	Reference scenarios were selected based on scenarios developed by the IPCC and the International Institute for Applied Systems Analysis (IIASA). This scenario is "Rocky Road" which is structured to assess whether our organization is prepared to handle a chaotic and challenging geopolitical environment where climate policy is superseded by regional security issues and resource scarcity. It takes into account the transition risks emerging from geopolitical rivalries and the elevated physical risks that occur due to a lack of attention and investment in global adaptation and mitigation strategies. This scenario is built upon SSP 3 and RCP 4.5, projecting a global average temperature increase of 2 - 3°C by 2100. It thus serves as a test of our ability to withstand high-risk, volatile situations and our readiness to adapt in an environment where climate concerns are not the priority.
Physical climate scenarios	Customized publicly available physical scenario	Company-wide	4.1°C and above	Reference scenarios were selected based on scenarios developed by the IPCC and the International Institute for Applied Systems Analysis (IIASA). This scenario is "Full Throttle" which is constructed to determine whether our organization is well-equipped to face high physical risks that could impact safety, disrupt business continuity, and affect revenue potential. In this scenario, we assume almost no effective climate policy in practice, which leads to minimal transition risks. However, due to an acceleration in fossil fuel use, the organization is highly exposed to a wide array of physical risks. Building on SSP 5 and RCP 8.5, this scenario forecasts a global average temperature rise of over 5°C by 2100. It tests our resilience and preparedness for extreme physical risk scenarios, in the context of negligible climate policy actions.

C3.2b

(C3.2b) Provide details of the focal questions your organization seeks to address by using climate-related scenario analysis, and summarize the results with respect to these questions.

Row 1

Focal questions

The focal question that Agnico Eagle seeks to address through climate-related scenario analysis is: "How can we ensure the resilience and adaptability of our business strategies across a wide spectrum of economic, regulatory, technological, and societal conditions and consider how the company's businesses and strategies might fare under varying operating environments?"

Given the inherent uncertainty of the future, our focus is not on predicting or assigning probabilities to scenarios. Instead, we are committed to evaluating how our strategies can withstand various operating environments and adjusting as necessary. Our scenario analyses, thus, do not serve as forecasts or predictions, but as a tool to enhance our strategic resilience amidst changing conditions.

Results of the climate-related scenario analysis with respect to the focal questions

Our climate-related scenario analysis, aimed at assessing the resilience and adaptability of our business strategies under diverse conditions, revealed the following results:

In the Net Zero 2050 scenario, a surging demand for green commodities and technologies revealed the need for companies to effectively address climate change or risk reputational damage, litigation, or shutdowns. The increased risk of wildfires and heatwaves disrupting operations emphasized the need for adaptability and robust community engagement.

In the Delayed Transition scenario, frequent severe weather events underscored the need for resilient production strategies. Rapid sustainability transition, while costly, was seen as essential, despite potential curtailing of consumer demand due to rising carbon prices. The division of the market into "green" and "brown" commodities highlighted the necessity of future-proofing our operations.

In the Rocky Road scenario, the volatility in commodity demand and pricing due to societal instability and resource shortages underlined the importance of strategic flexibility. The possibility of asset nationalization and increased industry risks necessitates robust risk management strategies.

In the Full Throttle scenario, with no carbon pricing, technological advancements in mining emerged as crucial for maintaining safety and efficiency. The rise of unscrupulous producers exploiting mines highlighted the importance of responsible mining and community relations.

These scenarios' analysis in 2022 helped Agnico Eagle ensure our strategies' resilience and adaptability under varied operating environments, emphasizing our commitment to achieving net-zero emissions by 2050. The critical themes for our strategy were identified as electrification, public policy, finance, reputation, and suppliers, helping us in formulating our transition plan. This has informed us to take action with each themes identified and we have already made efforts in electrification which is disclosed in our initiative section of the CDP.

C3.3

(C3.3) Describe where and how climate-related risks and opportunities have influenced your strategy.

	Have climate-related risks and opportunities influenced your strategy in this area?	Description of influence
Products and services	Yes	After completing our scope 3 emission calculations we now have quantified where the highest emissions are within our value chain. We intend to begin engaging with our vendors on climate-related risks and opportunities in 2023.
Supply chain and/or value chain	Yes	In 2021, we began addressing our supply chain's climate-related risks and opportunities by creating a vendor engagement questionnaire. We continued this initiative in 2022, working on an awareness mechanism to encourage climate action and emissions reporting across our supply chain. We have kept the momentum going into 2023, with further plans for supply chain engagement. These include updating our procurement website and supplier code of conduct and preparing an engagement letter to initiate discussions with key suppliers. These actions signify our commitment to working closely with our suppliers to align on climate objectives.
Investment in R&D	Yes	We remain committed to investing in research and development (R&D) to lower the carbon footprint of our operations. This includes initiatives like electrifying our vehicle fleets and optimizing mineral transportation methods. Furthermore, we are consistently working on strategic plans to identify and pursue potential funding opportunities related to decarbonization. These strategies help us continue our pursuit of sustainable and climate-conscious operations.
Operations	Yes	In 2021, we finished climate-related scenarios for our Meadowbank and Meliadine operations in Nunavut. This was a part of the permitting process and involved unique scenarios, inputs, assumptions, methods, and time horizons based on each project's specific requirements and regulations. The assessments were carried out according to Guidelines issued by the Nunavut Impact Review Board for the Project, and the process defined by the Federal-Provincial-Territorial Committee on Climate Change and Environmental Assessment, where applicable. We also brought in independent specialist consultants to evaluate both physical and transition risks related to climate, as well as the opportunities presented by climate change at the corporate level. In 2022, we completed a business-wide scenario analysis, followed by a site-specific physical risk assessment based on the identified risks from the scenario analysis. Each geographical location was considered under distinct climate-related scenarios, with the findings planned for integration into our Risk Management and Mitigation Strategies (RMMS) and our overarching climate strategy. Looking forward to 2023, we aim to build upon this by undertaking a transition risk analysis for each site. This will further enhance our understanding of climate-related risks, opportunities and inform our mitigation strategies.

C3.4

(C3.4) Describe where and how climate-related risks and opportunities have influenced your financial planning.

	Financial planning elements that have been influenced	Description of influence
Row 1	Indirect costs Capital expenditures Assets	Climate-related risks and opportunities have significantly shaped our financial planning. For instance, our Nunavut operations infrastructure has been built to withstand anticipated climate change scenarios. Furthermore, we integrate climate change scenarios into our closure planning, adjusting the associated costs accordingly. Our project evaluation process now includes a decarbonization component. This involves systematic forecasting of GHG emissions and investing in the pilot testing of new technologies or detailed engineering of lower emission solutions. Notable examples include the battery electric vehicle (BEV) pilot test at our Kittila and LaRonde mines, the detailed engineering of an electric trolley assist system for hauling trucks at the Detour mine, and windmill equipment for our Nunavut operations. We also continue to invest in research and development of lower emission technologies and long-term stability of critical infrastructure, like tailings storage facilities. Carbon pricing is another critical factor in our financial planning, ensuring that we account for the potential future costs associated with carbon emissions.

C3.5

(C3.5) In your organization's financial accounting, do you identify spending/revenue that is aligned with your organization's climate transition?

	Identification of spending/revenue that is aligned with your organization's climate transition	Indicate the level at which you identify the alignment of your spending/revenue with a sustainable finance taxonomy
Row 1	No, but we plan to in the next two years	<Not Applicable>

C4. Targets and performance

Does this target cover any land-related emissions?

No, it does not cover any land-related emissions (e.g. non-FLAG SBT)

% of target achieved relative to base year [auto-calculated]**Target status in reporting year**

Underway

Please explain target coverage and identify any exclusions

Our target coverage encompasses a commitment to reduce our absolute Scope 1 and Scope 2 greenhouse gas (GHG) emissions by 30% by 2030, using 2021 levels as the base year. This signifies a direct decrease in the GHGs we emit from our operations. Please note, reductions are approximated to the nearest ten thousand, so the total reduction may not sum exactly due to rounding.

As for exclusions, our target currently only includes Scope 1 and Scope 2 emissions, meaning Scope 3 emissions, which are all indirect emissions that occur in the value chain of the reporting company, are not part of this goal. Moreover, potential growth factors of AEM are currently not included and will need to be accounted for in future emission reductions. Additionally, emissions from the Canadian Malartic Mine are specifically excluded from our target.

Plan for achieving target, and progress made to the end of the reporting year

To address our ambitious Net-Zero targets, we have honed in on three crucial areas: energy efficiency, technology transition, and increased use of renewable energy across all operations.

In energy efficiency, we're committed to reducing energy use site-wide. Through workshops held in 2021 and 2022, we identified various initiatives including energy management systems and heat recovery systems. By 2030, we expect these to reduce emissions by 40 ktCO₂e annually across our portfolio. In terms of energy efficiency, our Kittilä mine in Finland is involved in an Energy Efficiency Agreement, reducing energy needs and costs through inventive strategies. Our LaRonde complex in Quebec has introduced new ventilation strategies to cut energy consumption, and our Meliadine mine in Nunavut is efficiently utilizing diesel energy.

For technology transitions, we're focusing on electrifying equipment and using more sustainable fuels. Our transition projects could potentially cut emissions by 150 ktCO₂e annually by 2030. Notably, our Detour Lake Mine in Ontario is exploring an autonomous haulage system and a Trolley-Assist Haulage program, which alone could reduce annual emissions by 96 ktCO₂e. We are also pioneering battery-powered mining machine trials at our LaRonde Mine in Quebec and Fosterville Mine in Australia. Furthermore, our Kittilä Mine in Finland is testing three battery-powered mining machines as part of the EU's Sustainable Intelligent Mining Systems project.

Simultaneously, we're focusing on the greening of our electrical grids. Lobbying for low-carbon grid access could cut emissions by 60 ktCO₂e annually by 2030. Our campaign for renewable energy sees us exploring various agreements and partnerships to develop renewable energy solutions, potentially reducing emissions by 190 ktCO₂e annually by 2030. We're collaborating with governments and local communities to increase renewable energy use. The proposed Kivalliq Hydro-Fibre Link project in Nunavut is an example, aiming to connect five communities to the Manitoba electricity and fibreoptic grids. This Inuit-led initiative has received over \$11.5 million in funding from the Canadian government for development and preliminary data collection. This comprehensive approach to sustainability is moving us closer to our Net-Zero goal, reaffirming our commitment to environmental responsibility.

List the emissions reduction initiatives which contributed most to achieving this target

C4.2**(C4.2) Did you have any other climate-related targets that were active in the reporting year?**

Net-zero target(s)

C4.2c

(C4.2c) Provide details of your net-zero target(s).

Target reference number

NZ1

Target coverage

Company-wide

Absolute/intensity emission target(s) linked to this net-zero target

Abs1

Target year for achieving net zero

2050

Is this a science-based target?

Yes, we consider this a science-based target, but we have not committed to seek validation of this target by the Science Based Targets initiative within the next two years

Please explain target coverage and identify any exclusions

Our Net Zero 2050 target applies company-wide to our Scope 1 and Scope 2 emissions. Emissions from our 50% owned Canadian Malartic operations are not included.

Do you intend to neutralize any unabated emissions with permanent carbon removals at the target year?

Yes

Planned milestones and/or near-term investments for neutralization at target year

We are strategically focusing our near-term investments and planned milestones on the reduction of Scope 1 and 2 emissions. Our goal is to achieve a 30% reduction by 2030 and reach net-zero emissions by 2050. Key to our approach is the investment in Energy Efficiency and Technology Transition. We've started preliminary modeling to identify and implement actions in these areas that will significantly reduce our carbon footprint across all operations. Another critical project underway is a feasibility study led by our Technical Services team. This study is exploring the advantages of integrating electrification technology at our Detour Lake site. We've begun to trial several electrified machines at various sites with plans to further invest and implement as we refine our understanding of the technology. In addition, we're directing our investments toward increasing the use of renewable energy. We're developing in-house renewable energy solutions and promoting a shift towards a higher proportion of renewables in our public electricity grids. Concurrently, we're actively seeking external funding opportunities to support our decarbonization efforts.

Planned actions to mitigate emissions beyond your value chain (optional)

To mitigate emissions beyond our immediate operations and deeper into our value chain, we're focusing on several planned actions.

Firstly, we're enhancing our Scope 3 assessments. These indirect emissions encompass aspects such as goods and services, upstream transportation, distribution, and employee commuting. We're investing more resources into these assessments, aiming for a clearer understanding of our emissions within our value chain and identifying more effective reduction strategies.

In 2022, we began pinpointing our priority suppliers, acknowledging that our supply chain holds a significant part of our emissions impact. By increasing awareness and fostering a deeper understanding of our Scope 3 performance, we aim to create an influence that extends beyond our direct operations. We're furthering this by directly engaging with each priority supplier and requesting they respond to the CDP Supply Chain Climate Change questionnaire. This initiative allows us to communicate more effectively about potential climate-related risks and opportunities within our extended value chain.

Forward into 2023, we are making strong progress to develop mechanisms to encourage climate action and emissions reporting across our supply chain.

C4.3

(C4.3) Did you have emissions reduction initiatives that were active within the reporting year? Note that this can include those in the planning and/or implementation phases.

Yes

C4.3a

(C4.3a) Identify the total number of initiatives at each stage of development, and for those in the implementation stages, the estimated CO2e savings.

	Number of initiatives	Total estimated annual CO2e savings in metric tonnes CO2e (only for rows marked *)

C4.3c

(C4.3c) What methods do you use to drive investment in emissions reduction activities?

Method	Comment
Employee engagement	The operations have energy committees made up of employees researching energy optimization.
Partnering with governments on technology development	We're actively partnering with governments to foster technology development and emission reduction. We're collaborating with the Canadian Infrastructure Bank to identify decarbonization funding opportunities. Furthermore, we're leveraging government initiatives like the Decarbonization Incentive Program, which recently increased its cost-share provision and maximum funding, thereby supporting our projects such as the Detour Trolley Assist.

C4.5

(C4.5) Do you classify any of your existing goods and/or services as low-carbon products?

No

C5. Emissions methodology

C5.1

(C5.1) Is this your first year of reporting emissions data to CDP?

No

C5.1a

(C5.1a) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

Row 1

Has there been a structural change?

Yes, a merger

Name of organization(s) acquired, divested from, or merged with

Kirkland Lake Gold

Details of structural change(s), including completion dates

The structural change of note occurred when Agnico Eagle successfully merged with Kirkland Lake Gold. This major transformation was completed on February 8, 2022. As a result of this merger, Agnico Eagle became the operator of the Macassa and Detour Lake mines. The company's board of directors was also reorganized and in 2022 it included a diverse team of 12 individuals, including CEO, Sean Boyd.

C5.1b

(C5.1b) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

	Change(s) in methodology, boundary, and/or reporting year definition?	Details of methodology, boundary, and/or reporting year definition change(s)
Row 1	No	<Not Applicable>

C5.1c

(C5.1c) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in C5.1a and/or C5.1b?

	Base year recalculation	Scope(s) recalculated	Base year emissions recalculation policy, including significance threshold	Past years' recalculation
Row 1	No, because the impact does not meet our significance threshold	<Not Applicable>	We did not need to recalculate our baseline year because the changes did not exceed the threshold of significance. According to the guidelines from the GHG Protocol, an adjustment is necessary to our baseline if there's a significant shift, over 10%, in our Scope 1, 2, or 3 baseline year emissions. This would typically happen due to a major change in how we calculate emissions or if there's a change in our company profile, such as acquiring or divesting business entities. On the contrary, we already factored in emissions from the operations of Kirkland Lake when setting our base year emissions.	Yes

(C5.2) Provide your base year and base year emissions.**Scope 1****Base year start**

Comment

The 'spend-based' method as described in the Scope 3 GHG Protocol Guidance was used to calculate these emissions, with industry-average emissions factors applied based on the pre-tax economic tax value of the goods and services. Industry-average emissions factors were sourced from WRI screening tool via Quantis GHG Evaluator. In some cases, it is difficult to separate purchases of capital goods from the Category 2 Capital goods and services. Where there was a lack of clarity, spend data was allocated to either Category 1 or 2 (ensuring inclusion in the overall estimate) based on assumptions on the primary purpose of the purchased goods. Emissions associated with other Scope 3 categories that may also be identified as purchased goods and services were not included in this category, and were assigned to their respective Scope 3 categories as recommended by the Scope 3 standard. Greater than 90% of total spend for each country was categorized and included, unless it is included in another Scope 3 category; the remaining 10% will be further reviewed and incorporated into the next iteration of the assessment.

Scope 3 category 2: Capital goods**Base year start**

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

115102

Comment

The 'spend-based' method as described in the Scope 3 GHG Protocol Guidance was used to calculate these emissions, with industry-average emissions factors applied based on the pre-tax economic tax value of the goods and services. Industry-average emissions factors were sourced from WRI screening tool via Quantis GHG Evaluator. In some cases, it is difficult to separate purchases of capital goods from the Category 1 Purchased goods and services. Where there was a lack of clarity, spend data was allocated to either Category 1 or 2 (ensuring inclusion in the overall estimate) based on assumptions on the primary purpose of the purchased goods. Emissions associated with other Scope 3 categories that may also be identified as relating to transportation and distribution were not included in this category, and were assigned to their Category 4 as recommended by the Scope 3 standard. Greater than 90% of total spend for each country was categorized and included, unless it is included in another Scope 3 category; the remaining 10% will be further reviewed and incorporated into the next iteration of the assessment.

Scope 3 category 3: Fuel-and-energy-related activities (not included in Scope 1 or 2)

Base year start

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

Comment

The 'average-data' method of GHG Protocols was used, which involves estimating emissions by using secondary data (industry average) emission factors for upstream emissions per unit of consumption (for example, kg CO2-eq/kWh).

Scope 3 category 4: Upstream transportation and distribution

Base year start

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

130595

Comment

The 'spend-based' method as described in the Scope 3 GHG Protocol Guidance was used to calculate these emissions, with industry-average emissions factors applied based on the pre-tax economic tax value of transportation and distribution services. Industry-average emissions factors were sourced from WRI screening tool via Quantis GHG Evaluator. Following the Scope 3 Standard guidelines, this category includes emissions from the transport of products where freight costs are covered by Agnico Eagle, as well as purchased transport services for process inputs for operations. This category includes emissions from inland transport (road and rail), air transport, and water transport. Emissions from the transport of process inputs to Agnico Eagle's operations where data is not available (for example when transport cost is already incorporated in suppliers' price) are excluded from this category, and rather included in Category 1 Purchased Goods and Services. Transportation and distribution purchases associated specifically and directly with fuel purchase are also excluded, with combustion carried in Scope 1 emissions and upstream emissions carried in Category 3 Fuel and energy-related activities.

Scope 3 category 5: Waste generated in operations

Base year start

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

16593

Comment

The waste-type-specific method as described by the Scope 3 GHG Protocol Guidance was applied, which involves using emission factors for specific waste types and waste treatment methods. Each waste type has been assigned an emission factor referring to its treatment form, in case there were no emission factors available for a specific waste type treatment the landfill factor was applied. Emissions factors were sourced using the WRI Screening Tool via Quantis GHG Evaluator. Transportation of domestic waste is not specifically included, but is incorporated in Category 1 Purchased goods and services. This category does not include transportation or management of waste rock, which is covered either directly in Scope 1 and 2 emissions; or, where managed by external parties, it is covered in Category 1 Purchased goods and services.

Scope 3 category 6: Business travel

Base year start

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

18656

Comment

The 'spend-based' method was applied as described by the Scope 3 GHG Protocol Guidance, with application of industry average emissions factors (by mode of transport). Emissions factors were sourced using the WRI Screening Tool via Quantis GHG Evaluator. This category focussed on clearly identified business travel, rather than the transportation of employees to remote sites which was included in Category 7 Employee commuting. It includes domestic and international flights undertaken by employees for business travel purposes, as well as other purchased business travel services (hotel accommodation) as identified from the spend data. Given the locations of Agnico's operations and the need for travel to reach our sites, there may be some overlap of activities under this category and Category 7 Employee commuting. Efforts are made to coincide travel, meaning some business travel may have occurred in the same mode and trip as employee commuting. The level of granularity in the internal source data was not always sufficient to clearly distinguish these activities; this did not lead to exclusion of activities, but rather the possibility that some business travel emissions are allocated into Category 7 Employee commuting.

Scope 3 category 7: Employee commuting

Base year start

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

116429

Comment

The 'average-data' method as described in the Scope 3 GHG Protocol Guidance was applied, estimating emissions from employee commuting based on an assumed average commuting pattern. Secondly, the 'spend-data' method was applied for charter flights, transporting employees to remote operations. Of note, charter flights contributes approximately 75% of the total emissions in this category. This category also includes commuting activities for supplementary workforce including contractors based at the operating sites. Employee commuting to remote sites which occurred in company-owned assets (flight), is included in Scope 1 emissions.

Scope 3 category 8: Upstream leased assets

Base year start

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

0

Comment

The company does not have up-stream leased assets for which it has operational control; this category is considered not relevant and is not calculated.

Scope 3 category 9: Downstream transportation and distribution

Base year start

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

0

Comment

The company does not have downstream transportation for which it has operational control; this category is considered not relevant and is not calculated.

Scope 3 category 10: Processing of sold products

Base year start

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

356

Comment

The 'average data' method as described in the Scope 3 GHG Protocol was applied, estimating emissions for processing of sold products based on average emissions from the refining of gold tonnage. The average emissions from the refining of gold was sourced from Table 3 of World Gold Council's report 'Gold and Climate Change: Current and Future Impacts.' The GHG intensity of gold refining was applied to our gold production tonnage.

Scope 3 category 11: Use of sold products

Base year start

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

22175

Comment

The 'direct use-phase' method supported by World Gold Council data and information. Downstream emissions within this category were estimated for jewellery fabrication and distribution, production of investment products (bars and coins), and gold as a component in electronics with a restricted focus on the fabrication process. For further information, please see World Gold Council's 'Gold and Climate Change: Current and Future Impacts' appendices report, p1-2.

Scope 3 category 12: End of life treatment of sold products

Base year start

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

356

Comment

The 'average data' method as described in the Scope 3 GHG Protocol was applied, estimating emissions for end of life treatment of sold products based on average emissions from the refining and recycling of gold tonnage. The average emissions from the refining and recycling of gold was sourced from Table 3 of World Gold Council's report 'Gold and Climate Change: Current and Future Impacts.' The GHG intensity of gold refining was applied to our gold production tonnage.

Scope 3 category 13: Downstream leased assets

Base year start

January 1 2021

Base year end

December 31 2021

Base year emissions (metric tons CO2e)

0

Comment

The company does not have downstream leased assets for which it has operational control; this category is considered not relevant and is not calculated.

Scope 3 category 14: Franchises

Estimated percentage of total Scope 1+2 emissions this excluded source represents

5

Estimated percentage of total Scope 3 emissions this excluded source represents

0

Explain why this source is excluded

We've found that the emissions from our administrative areas, exploration locations, and shut-down sites are quite small. In fact, together they make up less than 5% of our total emissions (Scope 1 and 2). So, we've decided not to include them in our overall emission calculations.

Explain how you estimated the percentage of emissions this excluded source represents

In 2021, we gathered as much information as possible about our fuel usage and determined that it wasn't significant.

C6.5

(C6.5) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.

Given the locations of Agnico's operations and the need for travel to reach our sites, there may be some overlap of activities under this category and Category 7 Employee commuting. Efforts are made to coincide travel, meaning some business travel may have occurred in the same mode and trip as employee commuting. The level of granularity in the internal source data was not always sufficient to clearly distinguish these activities; this did not lead to exclusion of activities, but rather the possibility that some business travel emissions are allocated into Category 7 Employee commuting.

Employee commuting

Evaluation status

Relevant, calculated

Emissions in reporting year (metric tons CO2e)

118473

Emissions calculation methodology

Average data method

Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

Please explain

The 'average-data' method as described in the Scope 3 GHG Protocol Guidance was applied, estimating emissions from employee commuting based on an assumed average commuting pattern. Secondly, the 'spend-data' method was applied for charter flights, transporting employees to remote operations. Of note, charter flights contributes approximately 75% of the total emissions in this category. Due to the COVID-19 global pandemic conditions for 2020, the calculation was adjusted based on the number of employees that worked from home from March 2020 through December 2020. This category also includes commuting activities for supplementary workforce including contractors based at the operating sites. Employee commuting to remote sites which occurred in company-owned assets (flight), is included in Scope 1 emissions.

Upstream leased assets

Evaluation status

Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)

<Not Applicable>

Emissions calculation methodology

<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

Please explain

The company does not have upstream leased assets for which it has operational control; this category is considered not relevant and is not calculated.

Downstream transportation and distribution

Evaluation status

Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)

<Not Applicable>

Emissions calculation methodology

<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

Please explain

Downstream transportation and distribution of products sold by Agnico is paid for by Agnico, and therefore is included either included in Scope 1 as direct emissions or in Category 4 Upstream transportation and distribution as a purchased service.

Processing of sold products

Evaluation status

Relevant, calculated

Emissions in reporting year (metric tons CO2e)

316

Emissions calculation methodology

Average data method

Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

Please explain

The 'average data' method as described in the Scope 3 GHG Protocol was applied, estimating emissions for processing of sold products based on average emissions from the refining of gold tonnage. The average emissions from the refining of gold was sourced from Table 3 of World Gold Council's report 'Gold and Climate Change: Current and Future Impacts.' The GHG intensity of gold refining was applied to our gold production tonnage.

Use of sold products

Evaluation status

Relevant, calculated

Emissions in reporting year (metric tons CO2e)

19690

Emissions calculation methodology

Methodology for direct use phase emissions, please specify (Downstream emissions within this category were estimated for jewellery fabrication and distribution, production (refining) of investment products (bars and coins), and gold as a component in electronics focused on the fabrication process.)

Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

Please explain

The 'direct use-phase' method supported by World Gold Council data and information. Downstream emissions within this category were estimated for jewellery fabrication and distribution, production of investment products (bars and coins), and gold as a component in electronics with a restricted focus on the fabrication process. For further information, please see World Gold Council's 'Gold and Climate Change: Current and Future Impacts' appendices report, p1-2.

End of life treatment of sold products

Evaluation status

Relevant, calculated

Emissions in reporting year (metric tons CO2e)

316

Emissions calculation methodology

Average data method

Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

Please explain

The 'average data' method as described in the Scope 3 GHG Protocol was applied, estimating emissions for end of life treatment of sold products based on average emissions from the refining and recycling of gold tonnage. The average emissions from the refining and recycling of gold was sourced from Table 3 of World Gold Council's report 'Gold and Climate Change: Current and Future Impacts.' The GHG intensity of gold refining was applied to our gold production tonnage.

Downstream leased assets

Evaluation status

Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)

<Not Applicable>

Emissions calculation methodology

<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

Please explain

The company does not have downstream leased assets for which it has operational control; this category is considered not relevant and is not calculated.

Franchises

Evaluation status

Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)

<Not Applicable>

Emissions calculation methodology

<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

Please explain

The company does not operate on a franchise model and as such has no franchisees to which emissions can be attributed. As such, this category is not relevant and has not been calculated.

Investments

Evaluation status

Relevant, calculated

Emissions in reporting year (metric tons CO2e)

105692

Emissions calculation methodology

Investment-specific method

Percentage of emissions calculated using data obtained from suppliers or value chain partners

100

Please explain

The 'investment-specific' method as described in the Scope 3 GHG Protocol Guidance was applied. As Agnico holds 50% ownership of Canadian Malartic, this category was calculated as 50% of Canadian Malartic's combined Scope 1 and 2 emissions. Other investment activities including equity investments, debt investments, or project finance were considered below a threshold of X and were excluded.

Other (upstream)

Comment

Scope 3 figures reported in 2020 were in kilograms rather than tonnes and therefore overstated by a factor of 1000.

C6.7

(C6.7) Are carbon dioxide emissions from biogenic carbon relevant to your organization?

No

C6.10

(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure

0.000220365

Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)

1174712

Metric denominator

unit total revenue

Metric denominator: Unit total

5330745000

Scope 2 figure used

Location-based

% change from previous year

7.28

Direction of change

Increased

Reason(s) for change

Mergers
Change in revenue

Please explain

The primary cause of the 7.28% increase this year in both our total (gross) emissions (Scope 1 and 2) and revenue is the merger with another company. However, it's important to note that our last year's numbers didn't account for the emissions from the company we joined with (2021 gross scope 1 and 2 emission is 691,609). Also, a correction is needed: the total revenue for the reporting year of 2021 should be \$5,746,800,000, not the previously stated \$3,173,604,000 (As the value includes revenue of Kirkland. For reference, the 2022 intensity figure is 0.00020365 and the corrected 2021 intensity figure is 0.0002054.

Intensity figure

0.4

Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)

1174712

Metric denominator

ounce of gold

Metric denominator: Unit total

2945433

Scope 2 figure used

Location-based

% change from previous year

6.81

Direction of change

Increased

Reason(s) for change

Mergers

Please explain

The primary cause of the increase this year in both our total (gross) emissions (Scope 1 and 2) and payable gold is lower production of gold in 2022 which was 216,197 Oz less than that of our production in 2021.

C7. Emissions breakdowns

C7.1

(C7.1) Does your organization break down its Scope 1 emissions by greenhouse gas type?
Yes

C7.1a

(C7.1a) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used greenhouse warming potential (GWP).

Greenhouse gas	Scope 1 emissions (metric tons of CO2e)	GWP Reference
CO2	889181	IPCC Fifth Assessment Report (AR5 – 100 year)
CH4	4967	IPCC Fifth Assessment Report (AR5 – 100 year)
N2O	13943	IPCC Fifth Assessment Report (AR5 – 100 year)

C7.2

(C7.2) Break down your total gross global Scope 1 emissions by country/area/region.

Country/area/region	Scope 1 emissions (metric tons CO2e)
Canada	772016
Finland	40172.9
Mexico	75594
Australia	19960

C7.3

(C7.3) Indicate which gross global Scope 1 emissions breakdowns you are able to provide.

By facility

C7.3b

(C7.3b) Break down your total gross global Scope 1 emissions by business facility.

Facility	Scope 1 emissions (metric tons CO2e)	Latitude	Longitude
LaRonde	41181.24	48.2475	-78.439

Comment

Products derived from oil were employed to produce onsite electricity, generating a total of 334,111 MWh. In contrast, gas products were primarily utilized for heating purposes, contributing to a total consumption of 259,535 MWh. The residual usage of fossil fuels was allocated for mining operations, which encompasses various applications such as transportation and industrial process plants and equipment, among others. This usage was reported in accordance with the guidelines for heat generation.

C8.2d

(C8.2d) Provide details on the electricity, heat, steam, and cooling your organization has generated and consumed in the reporting year.

	Total Gross generation (MWh)	Generation that is consumed by the organization (MWh)	Gross generation from renewable sources (MWh)	Generation from renewable sources that is consumed by the organization (MWh)
Electricity	334111.18	334111.18	0	0
Heat	3326046.04	3326046.04	10980.01	10980.01

C11.1c

(C11.1c) Complete the following table for each of the tax systems you are regulated by.

Canada federal fuel charge

Period start date

January 1 2022

Period end date

December 31 2022

% of total Scope 1 emissions covered by tax

86

Total cost of tax paid

29722630.76

Comment

Our Canadian operations, which include Meliadine, Meadowbank, Hope Bay, Macassa, Detour Lake, LaRonde, and Goldex, are subject to the country's fuel charge. This tax applies to our carbon emissions, which are measured in tCO₂e. In Canada, the tax rate is set at 50 CAD per tCO₂e. Given our emissions, we're due to pay a total of CAD 38,600,819.17 in fuel charges. To provide an equivalent value in US dollars, we used the Bank of Canada's annual average exchange rate for 2022. With an exchange rate of 0.77, our fuel charge in Canada comes to approximately USD 29,722,630.76.

Finland carbon tax

Period start date

January 1 2022

Period end date

December 31 2022

% of total Scope 1 emissions covered by tax

4

Total cost of tax paid

2856495.79

Comment

Our business operation in Finland, which includes Kittila, is subject to Finland's carbon tax policy. This tax is applied to our carbon emissions measured in tCO₂e. The current tax rate in Finland is 77 Euros (€) per tCO₂e, and our emissions for this period amount to a tax obligation of €2,712,721.55. To convert this amount to US dollars, we used the Bank of Canada's annual average exchange rate for 2022, which is 1.0530. By this rate, our carbon tax obligation in Finland equates to approximately \$2,856,495.79 USD.

Mexico carbon tax

Period start date

December 31 2022

Period end date

December 31 2022

% of total Scope 1 emissions covered by tax

8

Total cost of tax paid

51727.72

Comment

Mexico has a carbon tax in place that specifically targets the additional CO₂e emissions from fuels compared to natural gas. In this system, natural gas is exempt from the tax. At our La India and Pinos Altos operations, we utilized 1,013,493.26 gigajoules (GJ) of diesel and 26,471.47 GJ of gasoline. This resulted in a total of 72,514 metric tonnes of CO₂e emissions. If we had used natural gas instead, according to the IPCC 2006 guidelines, our emissions would have been significantly lower, at approximately 58,342 metric tonnes of CO₂e. Therefore, there's a difference of 14,172 metric tonnes of CO₂e between what we emitted and what we would have emitted had we used natural gas. Mexico's carbon tax is applied to this difference. The current rate is 73 Mexican pesos (MXN) per metric tonne of CO₂e. So, our carbon tax for this period comes to a total of 1,034,554.448 MXN. To provide an equivalent value in US dollars, we've used the Bank of Canada's annual average exchange rate for 2022, which is 0.050. By this rate, our carbon tax obligation amounts to approximately \$51,727.72 USD

C11.1d

(C11.1d) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?

Our regulatory compliance strategy is centered on anticipating and adapting to changes in our governing systems, with a strong focus on reducing greenhouse gas (GHG) emissions through sustainable energy practices. We incorporate energy efficiency and GHG management into our operations which informs annual initiatives to curb emissions, such as installing energy-efficient generators, developing electric vehicle infrastructure, and launching renewable energy projects.

Our 2022 strategic roadmap outlines an in-depth assessment of decarbonization potential at each site to formulate a corporate decarbonization plan. This strategy is paired with a commitment to stay updated with regulatory developments. Preliminary modeling in 2021 and 2022 guided our Net-Zero ambition, defining key actions for our 2030 and 2050 targets. It emphasized three operational areas: energy efficiency, technology transition, and increased renewable energy use. We have hosted decarbonization and energy mapping workshops to pinpoint reduction opportunities and necessary investments. These projects often entail electrification of equipment and the use of sustainable fuels. We aim to 'green' the electrical grids that power our sites. We are engaging with industry peers and governments to emphasize the importance of low-carbon grids, particularly in regions like Ontario, Nunavut, Australia, and Finland. Our primary approach to emission reduction is developing cleaner energy solutions. We are also exploring power purchase agreements and partnerships for renewable energy development. Finally, to enhance our Scope 3 performance, we initiated engagement with priority suppliers in 2022. This involves soliciting responses to the CDP Supply Chain Climate Change questionnaire, improving communication around climate-related risks and opportunities, and ultimately reducing GHG emissions.

C11.2

(C11.2) Has your organization canceled any project-based carbon credits within the reporting year?

No

C11.3

(C11.3) Does your organization use an internal price on carbon?

No, but we anticipate doing so in the next two years

C12. Engagement

C12.1

(C12.1) Do you engage with your value chain on climate-related issues?

Yes, our suppliers

Yes, other partners in the value chain

C12.1a

(C12.1a) Provide details of your climate-related supplier engagement strategy.

C12.1d

(C12.1d) Give details of your climate-related engagement strategy with other partners in the value chain.

Agnico Eagle collaborate with key suppliers and joint venture partners on decarbonization strategies and implement strategic sourcing approaches .

C12.2

(C12.2) Do your suppliers have to meet climate-related requirements as part of your organization's purchasing process?

No, but we plan to introduce climate-related requirements within the next two years

C12.3

(C12.3) Does your organization engage in activities that could either directly or indirectly influence policy, law, or regulation that may impact the climate?

Row 1

External engagement activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

Yes, we engage directly with policy makers

Yes, our membership of/engagement with trade associations could influence policy, law, or regulation that may impact the climate

Does your organization have a public commitment or position statement to conduct your engagement activities in line with the goals of the Paris Agreement?

No, but we plan to have one in the next two years

Attach commitment or position statement(s)

<Not Applicable>

Describe the process(es) your organization has in place to ensure that your external engagement activities are consistent with your climate commitments and/or climate transition plan

Our organization has established robust processes to ensure that our external engagement activities align with our climate commitments. A critical part of this process is the in-depth assessment we conduct on our key suppliers. Using public data, we analyze their progress on climate matters, including their Scope 1 and Scope 2 emissions disclosures and their identification of climate-related risks and opportunities. This study not only helps us comprehend the level of future interaction necessary with different suppliers but also highlights the areas where we need to focus our engagement efforts. We engage on a provincial and government level for each jurisdiction we operate to monitor carbon pricing policies and decarbonization incentives that align with their NDP commitment.

In 2022, we enhanced this approach, developing a system to prioritize supplier interactions based on our spending with them and their emission levels. This system allowed us to initiate meaningful dialogues with selected suppliers, further aligning our supply chain practices with our climate goals. Our efforts extended to raising awareness and understanding of our Scope 3 performance amongst key suppliers. This step is crucial in achieving our commitment to net-zero emissions, as it engages the entire supply chain in our climate goals. Further strengthening our process, we have a dedicated sustainability team overseeing the alignment of our external activities with our climate commitments. They set guidelines, implement procedures, and continuously monitor our external engagement activities to ensure their consistency with our goals.

For 2023, we are developing a comprehensive supplier engagement strategy to align our supply chain more effectively with our climate objectives. This includes promoting decarbonization within our supply chain and improving the precision of our Scope 3 emission estimates. To implement these changes, we plan to update our procurement website and revise our supplier code of conduct to stress the importance of climate resilience.

Primary reason for not engaging in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

<Not Applicable>

Explain why your organization does not engage in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

<Not Applicable>

C12.3a

(C12.3a) On what policy, law, or regulation that may impact the climate has your organization been engaging directly with policy makers in the reporting year?

Specify the policy, law, or regulation on which your organization is engaging with policy makers

AEM actively engages with policy makers on a variety of environmental and fiscal policies across the jurisdictions where we operate. Specific to Canada, we focus primarily on the Greenhouse Gas Pollution Pricing Act (GHGPPA), legislated under Bill C-74, and the Clean Fuel Regulations (SOR/2022-140).

The GHGPPA is a pivotal law that lays the foundation for carbon pricing, employing terms like 'charge' or 'pricing' instead of taxation. This legislation significantly influences our strategies for carbon management and decarbonization, and is a key focus of our discussions with Canadian policy makers. Additionally, we engage with governmental officials on matters related to the Clean Fuel Regulations (SOR/2022-140). These regulations aim to reduce the carbon intensity of fuels, which aligns directly with our own goals of decreasing our carbon footprint and transitioning towards cleaner energy sources.

Canada

Your organization's position on the policy, law, or regulation

Support with no exceptions

Description of engagement with policy makers

Our engagement with policy makers at both provincial and government levels is multifaceted and proactive, forming an integral part of Agnico Eagle's strategy to ensure sustainable and compliant operations. This interaction is central to our transition plan, which contributes to our pathway towards decarbonization and our commitment to achieving net-zero emissions by 2050.

There are two primary components to our transition plan covered by this engagement: First, we aim to reduce our CO2 output by integrating and promoting cleaner technology. In alignment with this goal, we continuously collaborate with Canadian authorities responsible for the Clean Technology Fund. This fund is designed to incentivize the adoption of environmentally friendly technologies across various industries, directly supporting our commitment to sustainability. One manifestation of this commitment is our ongoing project to implement a new Trolley System at our Detour Lake Mine Site, which is partially financed by the Clean Technology Fund and contributes to our efforts of CO2 reduction targets.

The second aspect of our transition plan covered, involves managing transition risks by staying abreast of policy changes within each jurisdiction. For instance, in Canada, we've adapted to changes in carbon pricing policies, transitioning from a national Output-Based Pricing System (OBPS) to Ontario's own Emissions Trading System (ETS). Our proactive engagement with policy makers ensures our operations remain compliant with these evolving regulations and allows us to adjust our financial planning in accordance with policy shifts.

Details of exceptions (if applicable) and your organization's proposed alternative approach to the policy, law or regulation

<Not Applicable>

Have you evaluated whether your organization's engagement on this policy, law, or regulation is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned

Please explain whether this policy, law or regulation is central to the achievement of your climate transition plan and, if so, how?

<Not Applicable>

C12.3b

(C12.3b) Provide details of the trade associations your organization is a member of, or engages with, which are likely to take a position on any policy, law or regulation that may impact the climate.

Trade association

Other, please specify (Mining Association of Canada)

Is your organization's position on climate change policy consistent with theirs?

Consistent

Has your organization attempted to influence their position in the reporting year?

Yes, we publicly promoted their current position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

Our organization's stance aligns closely with the Mining Association of Canada (MAC)'s position. We, too, are committed to an orderly transition towards a lower carbon future and believe in being proactive participants in the fight against climate change. Like the MAC, we support climate action in line with the ambition of the Paris Agreement, which is to limit global warming to well below 2 degrees Celsius above pre-industrial levels. This commitment is intrinsic to our goal of ensuring the long-term sustainability of our shared planet.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

Describe the aim of your organization's funding

<Not Applicable>

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned

Trade association

Other, please specify (World Gold Council)

Is your organization's position on climate change policy consistent with theirs?

Consistent

Has your organization attempted to influence their position in the reporting year?

Yes, we publicly promoted their current position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

Our organization shares the World Gold Council's recognition of climate change as a significant risk to the global economy and socio-economic development. Like the Council's members, we are committed to transparently reporting our positions and progress on climate-related risks. Our reporting aligns with the guidelines set by the Taskforce for Climate-related Financial Disclosures (TCFD), demonstrating our consistency with the Council's stance. We also support and abide by the Council's Responsible Gold Mining Principles (RGMPs), which call for companies to take proactive steps to combat climate change and report their efforts in line with accepted standards.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

Describe the aim of your organization's funding

<Not Applicable>

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

No, we have not evaluated

C12.4

C12.5

(C12.5) Indicate the collaborative frameworks, initiatives and/or commitments related to environmental issues for which you are a signatory/member.

	Environmental collaborative framework, initiative and/or commitment	Describe your organization’s role within each framework, initiative and/or commitment
Row 1	Task Force on Climate-related Financial Disclosures (TCFD) Other, please specify (Responsible Gold Mining Principles, Towards Sustainable Mining, United Nations Sustainable Development Goals)	Agnico Eagle adheres to several collaborative frameworks, initiatives, and commitments related to environmental issues. We abide by the Global Reporting Initiative (GRI) standards, which provide criteria and indicators for organizations to report their economic, environmental, and social performance. Our annual sustainability report is prepared in accordance with these standards. In addition, we align with the Task Force on Climate-related Financial Disclosures (TCFD), aiming to drive more informed decision-making through effective climate-related disclosures. This commitment became formal in 2021 and it significantly influences our climate strategy, risk management, and target setting. We are an active member of both the World Gold Council (WGC) and the Mining Association of Canada (MAC). As such, we endorse the WGC's Responsible Gold Mining Principles (RGMPs) and commit to the MAC's Towards Sustainable Mining (TSM) guidelines. These frameworks guide us in practicing environmentally responsible mining. In 2021, in line with the WGC's directive, we started reporting our positions and progress on climate-related risks as per TCFD recommendations. We also support the MAC's TSM Climate Change Protocol, which is in tune with the TCFD framework and encourages climate change consideration in business strategies. Finally, we actively support the United Nations Sustainable Development Goals (UN SDGs), recognizing the mining industry's potential for both positive and negative environmental impacts. We also participate in the CDP (formerly known as the Climate Disclosure Project), focusing on transparency and accountability in managing environmental impacts.

C15. Biodiversity

C15.1

(C15.1) Is there board-level oversight and/or executive management-level responsibility for biodiversity-related issues within your organization?

	Board-level oversight and/or executive management-level responsibility for biodiversity-related issues	Description of oversight and objectives relating to biodiversity	Scope of board-level oversight
Row 1	Yes, both board-level oversight and executive management-level responsibility	Biodiversity is a crucial aspect of Agnico Eagle's sustainability efforts, falling under the broader category of Environmental Stewardship. Our commitment to sustainability is reflected at the highest level, with updates presented at every quarterly meeting of the Health, Safety, Environment, and Sustainable Development (HSESD) committee of the Board. The Executive Vice President of Operational Excellence, who reports directly to our President & CEO, has the primary responsibility for overseeing and implementing our corporate sustainability program. We align our biodiversity conservation strategies with the Biodiversity Conservation Management Protocol, part of the Towards Sustainable Mining initiative by the Mining Association of Canada. We've pledged to incorporate biodiversity conservation and land use planning throughout all stages of our operations, reaffirming our commitment to environmental stewardship.	<Not Applicable>

C15.2

(C15.2) Has your organization made a public commitment and/or endorsed any initiatives related to biodiversity?

	Indicate whether your organization made a public commitment or endorsed any initiatives related to biodiversity	Biodiversity-related public commitments	Initiatives endorsed
Row 1	Yes, we have endorsed initiatives only	<Not Applicable>	Other, please specify (TNFD - Agnico Eagle is a member of the TNFD Forum, a global multi-disciplinary consultative group of institutions influencing the development of the framework)

C15.3

(C15.3) Does your organization assess the impacts and dependencies of its value chain on biodiversity?

Impacts on biodiversity

Indicate whether your organization undertakes this type of assessment

Yes

Value chain stage(s) covered

Direct operations

Portfolio activity

<Not Applicable>

Tools and methods to assess impacts and/or dependencies on biodiversity

Other, please specify (TSM's Biodiversity Conservation Management Protocol)

Please explain how the tools and methods are implemented and provide an indication of the associated outcome(s)

Agnico Eagle implements various tools and methods to promote and protect biodiversity across our operations. The focus of our approach aligns with the Biodiversity Conservation Management Protocol of the Mining Association of Canada's Towards Sustainable Mining (TSM) initiative. Here's how we put these methods into action and their potential impacts:

1. Identifying and Categorizing: We consistently gather data about the ecosystems where we operate and the species that inhabit them. This involves engaging with Indigenous Knowledge holders to learn more about the local ecosystems from their unique perspective. The information collected is integral to creating and implementing our biodiversity efforts and management plans. This approach not only helps protect local biodiversity but also contributes to the broader understanding and preservation of species.
2. Monitoring and Reporting: To assess the state of biodiversity and the impact of our operations, we carry out regular biodiversity assessments at all our sites. Each site has a dedicated biodiversity conservation plan or managed system to minimize our impact on local ecosystems. Our commitment to transparency means we participate in multi-stakeholder monitoring programs, sharing our findings and progress with external stakeholders.
3. Research and Development (R&D): To further enrich our knowledge and actions concerning biodiversity, we actively engage in various R&D projects. These projects aim to advance scientific understanding in areas that matter to our sites while supporting broader academic research efforts.

Dependencies on biodiversity

Indicate whether your organization undertakes this type of assessment

Yes

Value chain stage(s) covered

Direct operations

Portfolio activity

<Not Applicable>

Tools and methods to assess impacts and/or dependencies on biodiversity

Other, please specify (TSM's Biodiversity Conservation Management Protocol)

Please explain how the tools and methods are implemented and provide an indication of the associated outcome(s)

The process of Identifying and Categorizing is comparable to impact assessment. It involves a focus on our dependencies on biodiversity, although indirectly. As we aim to enhance our biodiversity approach in the coming years, we intend to integrate the latest best practices. In 2022, we took a proactive step and performed a gap analysis for the TNFD to assess our current practices and identify areas for improvement.

To delve deeper into the Identifying and Categorizing process: We continuously gather data about the ecosystems where our operations take place and the various species that live there. The goal is to comprehend our reliance on local biodiversity. We supplement our research by consulting Indigenous Knowledge holders, which allows us to gain a more holistic understanding.

C15.4

(C15.4) Does your organization have activities located in or near to biodiversity- sensitive areas in the reporting year?

Yes

C15.4a

(C15.4a) Provide details of your organization's activities in the reporting year located in or near to biodiversity -sensitive areas.

Classification of biodiversity -sensitive area

Key Biodiversity Area (KBAs)

Country/area

Finland

Name of the biodiversity-sensitive area

Lapinleikinmukka conservation area

Proximity

Adjacent

Briefly describe your organization's activities in the reporting year located in or near to the selected area

Indicate whether any of your organization's activities located in or near to the selected area could negatively affect biodiversity

No

Mitigation measures implemented within the selected area

<Not Applicable>

Explain how your organization's activities located in or near to the selected area could negatively affect biodiversity, how this was assessed, and describe any mitigation measures implemented

Classification of biodiversity -sensitive area

Key Biodiversity Area (KBAs)

Country/area

Mexico

Name of the biodiversity-sensitive area

N/A

Proximity

Up to 5 km

Briefly describe your organization's activities in the reporting year located in or near to the selected area

Indicate whether any of your organization's activities located in or near to the selected area could negatively affect biodiversity

No

Mitigation measures implemented within the selected area

<Not Applicable>

Explain how your organization's activities located in or near to the selected area could negatively affect biodiversity, how this was assessed, and describe any mitigation measures implemented

C15.5

(C15.5) What actions has your organization taken in the reporting year to progress your biodiversity-related commitments?

	Have you taken any actions in the reporting period to progress your biodiversity-related commitments?	Type of action taken to progress biodiversity- related commitments
Row 1	Yes, we are taking actions to progress our biodiversity-related commitments	Land/water management Species management Education & awareness Other, please specify (Afforestation program, improving our environment monitoring and management plans with a biology specialist, collaborate with local communities on species monitoring, and completing a river health assessment.)

C15.6

(C15.6) Does your organization use biodiversity indicators to monitor performance across its activities?

	Does your organization use indicators to monitor biodiversity performance?	Indicators used to monitor biodiversity performance
Row 1	No, we do not use indicators, but plan to within the next two years	Please select

C15.7

(C15.7) Have you published information about your organization's response to biodiversity-related issues for this reporting year in places other than in your CDP response? If so, please attach the publication(s).

Report type	Content elements	Attach the document and indicate where in the document the relevant biodiversity information is located
In voluntary sustainability report or other voluntary communications	Content of biodiversity-related policies or commitments Biodiversity strategy	Already attached is the 2022 sustainability report. Specifically, the Biodiversity & Nature Capital pages 66-69 cover our biodiversity approach and initiatives.

C16. Signoff

C-FI

(C-FI) Use this field to provide any additional information or context that you feel is relevant to your organization's response. Please note that this field is optional and is not scored.

C16.1

(C16.1) Provide details for the person that has signed off (approved) your CDP climate change response.

	Job title	Corresponding job category
Row 1	Vice President, Sustainability and Regulatory Affairs	Other, please specify (Vice President)

Submit your response

In which language are you submitting your response?

English

Please confirm how your response should be handled by CDP

	I understand that my response will be shared with all requesting stakeholders	Response permission
Please select your submission options	Yes	Public

Please confirm below

I have read and accept the applicable Terms
