2023 DISCLOSURE INDEX

About Eldorado

Eldorado Gold Corporation (“Eldorado” or the “Company”) is a Canadian mid-tier gold mining company, with shares trading on the Toronto (TSX: ELD) and New York (NYSE: EGO) stock exchanges.

Eldorado produced 485,139 ounces of gold in 2023 and, as of September 30, 2023, had proven and probable gold reserves of over 11.7 million ounces at an average grade of 1.04 Au g/t.⁶ Eldorado has assets in Canada, Türkiye, Greece and Romania.¹ The Company’s activities involve all facets of mining, including exploration, development, production, closure and rehabilitation. Headquartered in Vancouver, the Company directly employs over 4,800 people worldwide. Eldorado’s approach to business is based on our vision to build a safe, sustainable and high-quality business in the gold mining sector, creating value today and for future generations. Eldorado had a market capitalization on the NYSE of approximately \$2.9 billion as of March 31, 2024, and revenues of approximately \$1 billion in 2023. For more information on Eldorado, our entities and our performance, please see our 2023 Annual Information Form on our website at www.eldoradogold.com/investors/financial-information/filings.

2023 KEY FACTS AND FIGURES

4,869
employees and contractors

485,139 oz of Gold
produced in 2023

Presence in 4 Countries
Canada, Greece, Türkiye and Romania¹

11.7 Moz of Gold
in proven and probable reserves at an average grade of 1.04 Au g/t, as of September 30, 2023⁶

5 Mines
Kışladağ, Efemçukuru, Lamaque Complex,² Olympias and Stratoni³

31 Years
of experience building and operating mines globally

2 Development Projects
Skouries⁴ and Perama Hill⁵

1 The Company intends to sell its interest in the Certej project within the next 12 months.
2 The Lamaque Complex includes the Triangle Mine (Upper and Lower), the Ormaque Deposit, the Parallel Deposit, the Plug #4 Deposit and the Sigma Mill.
3 Stratoni was in care and maintenance during 2023. In this report, references to “Stratoni” or “the Stratoni mine” include the nearby Mavres Petres mine from which ore was processed at the Stratoni plant. Stratoni is also the site of the Stratoni Port Facility for the Kassandra Mines (Olympias, Skouries and Stratoni).
4 The Skouries development project was in care and maintenance during the first quarter of 2023, when it resumed construction, and is approximately 73% constructed as of March 31, 2024.
5 The Perama Hill development project is currently in care and maintenance.
6 Proven gold reserves of approximately 7,093,000 contained Au ounces at an average grade of 0.90 Au g/t and probable gold reserves of approximately 4,624,000 contained Au ounces at an average grade of 1.35 Au g/t, as of September 30, 2023. Please refer to the advisories at the end of this report for more information on the mineral reserves and mineral resources. For more information, please follow www.eldoradogold.com/assets to see the Resources and Reserves page of our website and to read the latest Technical Report for each of Eldorado’s assets.

About This Report

This report has been produced with reference to the **Global Reporting Initiative (GRI) Universal Standards and Topic Standards**. We have also aligned our disclosures with our **Communication on Progress for the United Nations Global Compact** in support of the **Sustainable Development Goals**, the **Sustainability Accounting Standards Board (SASB) – Metals & Mining Standard** and the **UN Guiding Principles Reporting Framework**.

This report includes data on Eldorado’s four mines that operated in 2023, as well as one development project under construction, two assets in care and maintenance, and one non-core asset. Performance analyses and discussions generally focus on our producing assets – Kışladağ, Lamaque, Efemçukuru and Olympias. Data represents the full 2023 calendar year and, unless otherwise noted, all costs are reported in U.S. dollars. Although the Sustainability Report is not externally verified, all data and content have been prepared and reviewed internally by our management teams and the **Sustainability Committee of the Board of Directors**. A change in this report from our 2022 Sustainability Report is the removal of data representing payments to governments through taxes, royalties and fees in the section “Transparency of Payments to Governments” and we now make reference to our annual **Extractive Sector Transparency Measures Act (ESTMA)** report that is filed and available on our website. We are also working to continually improve our reporting to align with leading external standards, and resultant changes in this report include disclosing workforce-related data according to updated age ranges; comprehensive disclosure of waste-related data, providing additional detail into our interactions with water on a site-by-site basis, and newly providing data

on IUCN Red List species with habitats affected by our operations. We have also included content to support our status of conformance to the World Gold Council’s (WGC) Responsible Gold Mining Principles (RGMP), which was previously done through our standalone RGMP Reports, and provide a summary of our externally verified Mining Association of Canada (MAC) Towards Sustainable Mining (TSM) results. Please note that, where applicable, restatements of prior year data have been identified in footnotes throughout the Report. Restatements occur as a result of updated assumptions or more accurate data becoming available after the publication of our previous Sustainability Report on May 31, 2023.

We welcome feedback from all stakeholders regarding our sustainability reporting. Please direct comments or requests for further information to Investor Relations by following www.eldoradogold.com/contact-us.

OTHER IN-COUNTRY SUSTAINABILITY REPORTING

In addition to this report, our Greek subsidiary, Hellas Gold S.A., regularly publishes a **Social Responsibility Performance Summary**, and Eldorado Gold (Quebec) Inc. (Eldorado Gold Québec) produces an annual **Social Responsibility Report** for local stakeholders.

ALIGNMENT WITH REPORTING FRAMEWORKS

A 2023 Disclosure Index containing Eldorado’s alignment with GRI, SASB and UNGP Reporting Framework can be found at the end of this report.

Efemçukuru, Türkiye

2023 Sustainability Highlights

Safe, Inclusive and Innovative Operations

56% Women

on our Board of Directors, and 11% self-identified as a member of another designated group

Reduced

Potentially fatal occurrence frequency rate by 20% at our operations

Achieved target

to reduce lost-time injury frequency rate (LTIFR) by 10% from 2022, with the lowest LTIFR in our 12 years of reporting

Missed target

to reduce total recordable injury frequency rate (TRIFR) by 10% from 2022

Supported diversity within our supply chain

through multiple partnerships as part of our continued sponsorship of the Artemis Project, which brings together women-led businesses related to mining

Responsibly Produced Products

SIMS

Olympias completed a Sustainability Integrated Management System Compliance Verification, including external verification of **MAC-TSM** results, and Eldorado received assurance of **full conformance to RGMP Year 3** requirements

Voluntary Principles on Security and Human Rights

being implemented at all operating mines after initial human rights assessments performed by a third party in 2021–2022

Supplier Code of Conduct

formally adopted across our global operations, to help our suppliers align with Eldorado's standards for health and safety, labour and human rights, environment, social performance and more

Engaged and Prosperous Communities

79%

of our employees are from local communities

99%

of our employees and contractors are from countries of operation

\$4.29M

in community investment

\$693M

paid to domestic suppliers

Zero

major social incidents

Healthy Environments, Now and For the Future

Industry leader

in dry-stack tailings implementation

0.40 tCO₂e/oz Au

average Scope 1 and Scope 2 GHG emissions intensity for operating mines

First electric haul truck

operationalized at Lamaque, which is expected to mitigate an estimated 1,700 tCO₂e per year, based on preliminary testing

Zero

major environmental incidents

MAC-TSM Level AAA

achieved at Olympias on Biodiversity Conservation Management and Tailings Management, based on a verified assessment

Message From the President and CEO

At Eldorado, we consider sustainability in everything we do, from the relationships we build with local communities to the implementation of socially and environmentally responsible best practices. We are breaking new ground, and we are unafraid to explore new avenues if it means we can find a better path forward.

2023 YEAR IN REVIEW

We made significant progress on our goals this year, reaching key milestones on initiatives that will continue to drive Eldorado forward, creating value today and for future generations. This progress would not be possible without the hard work, collaboration and innovation of our employees around the world. It has been inspirational to see our team members' dedication to finding a better way to operate our business, and I truly appreciate everyone's efforts – we all share in these successes.

Our mines in Québec and Greece achieved record gold production in 2023, and across all four operating mines, we produced 485,139 ounces of gold, achieving our guidance. This year, we also restarted full construction on the copper-gold Skouries project. Skouries provides us with a unique opportunity to incorporate leading sustainability technologies and practices, such as a comprehensive Environmental Monitoring System and dry-stack tailings.

In November, our team received the Outstanding Achievement Award for Project Financing at the Resourcing Tomorrow Awards. This award recognizes our work on the Skouries project in Greece, which created a unique financing package with contributions by two Greek banks (National Bank of Greece and Piraeus Bank), a Recovery and Resilience Facility (RRF) loan, provided by the EU via the Greek State, and a strategic investment by the European Bank for Reconstruction and Development (EBRD).

OUR SUSTAINABILITY FRAMEWORK IN ACTION

Health, safety and sustainability are key to our company strategy and Eldorado's current and future success. All of our efforts are guided by our Sustainability Framework and our Sustainability Integrated Management System (SIMS), which provides performance-based standards for all Eldorado sites.

In May 2023, we held our second SIMS compliance verification at Olympias in Greece. In collaboration with our Hellas Gold team on the ground, our global team of subject matter experts conducted interviews, document reviews and extensive tours and inspections of the mine site. In June, Olympias received minimum Level A or Yes across nearly all MAC-TSM performance indicators, including Level AAA for Biodiversity Conservation Management and Tailings Management.

We completed assurance against the WGC Conflict-Free Gold Standard (CFGS) for our 2022 operations and full conformance to RGMP Year 3 requirements.

We also launched our first-ever Supplier Code of Conduct, an essential addition to our policies and an important step in our responsible supply chain journey. The Supplier Code of Conduct helps to fulfill a requirement of the RGMPs, TSM and SIMS.

Last year, we were also proud to be included in the Globe and Mail's 2023 Board Games, where in recognition of our governance and disclosure practices, we ranked first in our sector (Materials) and 27th overall.

STRENGTHENING OUR FOUNDATIONS IN HEALTH AND SAFETY

People are at the core of our business, and their health and safety is the top priority in everything we do. Our safety-first culture reflects a commitment to our people, their families and the communities in which we operate.

In 2023, we evolved our process for investigating and sharing outcomes and learnings for Potentially Fatal Occurrences (PFO), the most significant health and safety events in mining. We have since seen progress, with a 20% reduction in our PFO frequency rate and a 63% reduction in our lost-time injury frequency rate at our operations. At Kışladağ, we're pleased to report a fourth consecutive year with no lost-time injuries.

In recognition of our safety best practices, our teams received several safety awards in 2023. For innovation and efforts to mitigate risks in the industry, we received the Euromines Silver Safety Award in Türkiye. Meanwhile in Greece, Hellas Gold received two awards for the development and implementation of new safety systems.

Although external recognition is gratifying, hearing from our team members around the world is one of our best measures of progress. In 2023, we held our first health and safety perceptions survey and received feedback from nearly 70% of our global workforce. Alongside technological advancements, subject matter expertise and industry best practices, this feedback will help guide our approach to health and safety in the future.

While we're proud of our progress, we cannot rest on our laurels as we know there's still more to do to ensure the health and safety of our people.

LEVERAGING NEW TECHNOLOGIES

The mining sector is home to many exciting innovations, from automated mucking systems to technologies that support grid decarbonization. We’re strong believers in the power of technology and innovation to improve health, safety and sustainability, contributing to not just a better business, but a better world.

In 2023, we introduced our first electric ore haul truck at our underground Lamaque Complex in Québec – a first in the Canadian province. Lamaque is already our lowest GHG-emitting operational mine, benefiting from Québec’s abundance of hydroelectricity and the implementation of on-site energy efficiency projects. An additional electric haul truck was delivered in the first quarter of 2024, and once fully operational, the trucks are expected to mitigate 1,700 tCO₂e of GHG emissions per year.

The electric haul trucks also bring more tangible benefits for our employees on site and for our business by reducing underground diesel emissions and lowering operating costs with improvements in production efficiency.

INVESTING IN COMMUNITIES WHERE WE WORK

We work hard to support the development goals of our host communities and governments. Last year, our community investment team implemented guidance to allow us to prioritize projects that promote long-term community development and build trust with local stakeholders.

All of our sites have robust community investment programs and have made significant progress on projects in 2023. In Québec, our Lamaque team continued long-standing and large-scale partnerships with community organizations to support education, health and wellness, arts and culture, and economic development.

At our Cassandra Mines (Olympias, Skouries and Stratoni) in Greece, and in collaboration with local communities, Hellas Gold established an investment framework to allocate \$80 million over 25 years related to our Cassandra Mines’ investments. Community investments in Greece targeted advancements in infrastructure, education and youth, and the economic and professional empowerment of women.

Improving support, training and access to resources for women entrepreneurs was also a focus for our Türkiye sites in 2023. At Efemçukuru, the “Productive Women, Strong Futures” program supports the social and economic empowerment of local women. Launched in 2022 and expanded in 2023, the program provides women entrepreneurs living in the region with certified beekeeping training and entrepreneurial coaching. In addition to the social and economic benefits of the program, “Productive Women, Strong Futures” has a positive environmental impact – beekeeping contributes to biodiversity and is considered a sustainable and environmentally friendly practice.

At Kışladağ, our community team is supporting local economic diversification through its “Women Entrepreneur Vision” program, led in partnership with Women-Friendly Brands. The program provides women entrepreneurs with mentorship, support in seeking grants and financial incentives and cooperatives, and training for essential skills including financial literacy, e-commerce and digital marketing.

RESPONDING TO EMERGENCIES

On two occasions this year, our teams around the world were called to respond to local emergencies that have had severe and enduring impacts.

I want to thank our teams in Türkiye for their immediate and unwavering response to the earthquakes that devastated the country on February 6, 2023. Our teams are trained in search and rescue, and to see their bravery and readiness to take action to save lives was incredibly moving. The entire Eldorado team applauds your efforts.

And in Québec, facing the worst wildfire season on record, our Lamaque team helped support the local community in whatever ways they could, including providing food and support for evacuees from impacted communities.

AN EYE ON THE FUTURE

Looking ahead, we’re excited to build on our hard work and achievements from the last year. We will continue to advance construction of the copper-gold Skouries project in Greece, which is expected to reach first production in the third quarter of 2025, and commercial production at the end of 2025. Skouries is expected to produce an average of 140,000 ounces of gold and 67 million pounds of copper per year, making Eldorado one of the European Union’s larger copper producers and a key supplier of the critical mineral set to drive the green economy.

In Québec, we look forward to putting a second electric ore haul truck into service. The use of electric trucks on site will bring significant GHG emissions reductions, as well as health and safety benefits. They serve as a reminder that, where feasible, electrification is a powerful tool as we work toward decarbonization.

After positive results in our SIMS Compliance Verifications at Lamaque and Olympias in the previous two years, which included external verification of TSM results and assurance of full conformance against the RGMPs, our sites in Türkiye plan to undergo the same process in 2024.

Our entire Eldorado team is committed to finding a better way to do things. We break ground in all that we do and are committed to leveraging the latest technology and innovations to set industry standards and best practices. I’m pleased to share the work our global teams have advanced this year and look forward to continuing this progress in 2024 and beyond.

Sincerely,

George Burns
President & CEO

Where We Operate

- Care and Maintenance
- Development Projects
- Office

1 The Lamaque Complex includes the Triangle Mine (Upper and Lower), the Ormaque Deposit, the Parallel Deposit, the Plug #4 Deposit and the Sigma Mill.
2 The Company intends to sell its interest in the Certej project within the next 12 months.
3 The Skouries development project was in care and maintenance during the first quarter of 2023, when it resumed construction, and is approximately 73% constructed as of March 31, 2024.
4 Stratoni was in care and maintenance during 2023. In this report, references to “Stratoni” or “the Stratoni mine” include the nearby Mavres Petres mine from which ore was historically processed at the Stratoni plant. Stratoni is also the site of the Stratoni Port Facility for the Kassandra Mines.

OPERATING MINES

Kışladağ

Location:
Uşak Province, Türkiye

Commodities:
Gold

Type of deposit:
Gold porphyry

Type of mine/processing method:
Open pit/heap leach

Life of mine:
13 years¹

Ownership:
100% Eldorado

Workforce:
1,271

2023 production:
154,849 oz Au

Proven and probable gold reserves¹:
3,759 Koz at 0.67 g/t

Efemçukuru

Location:
İzmir Province, Türkiye

Commodities:
Gold

Type of deposit:
Epithermal vein

Type of mine/processing method:
Underground/flotation

Life of mine:
6 years¹

Ownership:
100% Eldorado

Workforce:
892

2023 production:
86,088 oz Au

Proven and probable gold reserves¹:
550 Koz at 5.08 g/t

Lamaque Complex²

Location:
Québec, Canada

Commodities:
Gold

Type of deposit:
Orogenic gold

Type of mine/processing method:
Underground/flotation

Life of mine:
5.5 years at Upper Triangle¹

Ownership:
100% Eldorado

Workforce:
703

2023 production:
177,069 oz Au

Proven and probable gold reserves¹:
877 Koz at 6.12 g/t

Olympias

Location:
Halkidiki Peninsula, Greece

Commodities:
Gold, silver, lead, zinc

Type of deposit:
Polymetallic carbonate replacement

Type of mine/processing method:
Underground/flotation

Life of mine:
15 years¹

Ownership:
100% Eldorado

Workforce:
850

2023 production:
67,133 oz Au

Proven and probable reserves¹:
1,907 Koz Au at 6.70 Au g/t; 35,810 Koz Ag at 126 Ag g/t; 374 Kt Pb at 4.2%; 468 Kt Zn at 5.3%

¹ Based on proven and probable reserves as of September 30, 2023. Please refer to the advisories at the end of this report for more information on the mineral reserves and mineral resources. For more information, please follow www.eldoradogold.com/assets to find the latest Technical Report for each of Eldorado's assets and to see the Resources and Reserves page of our website.

² The Lamaque Complex includes the Triangle Mine (Upper and Lower), the Ormaque Deposit, the Parallel Deposit, the Plug #4 Deposit and the Sigma Mill.

DEVELOPMENT PROJECTS

Skouries¹

Location:
Halkidiki Peninsula, Greece

Commodities:
Gold, copper

Type of deposit:
Copper-gold porphyry

Type of mine/processing method:
Open pit and underground/gravity circuit and flotation

Life of mine:
20 years²

Ownership:
100% Eldorado

Workforce:
449

Proven and probable reserves²:
3,630 Koz Au at 0.77 Au g/t; 740 Kt Cu at 0.50%

CARE AND MAINTENANCE

Stratoni³

Location:
Halkidiki Peninsula, Greece

Commodities:
Silver, lead, zinc

Type of deposit:
Polymetallic carbonate replacement

Type of mine/processing method:
Underground/flotation

Ownership:

3 Stratoni was in care and maintenance during 2023. Exploration and drilling continued, with the goal of expanding reserves and resources before operations are resumed. In this report, references to "Stratoni" or "the Stratoni mine" include the nearby Mavres Petres mine from which ore was historically processed at the Stratoni plant. Stratoni is also the site of a port facility for the Kassandra Mines.

4 The Company intends to sell its interest in the Certej project within the next 12 months.

EXPLORATION

| Efemçukuru, Türkiye

| Lamaque Complex, Canada

| Olympias, Greece

| Efemçukuru, Türkiye

Türkiye

In Türkiye, our exploration activities include both near- and in-mine programs primarily focused on extending production at Efemçukuru, and an extensive early-stage project portfolio in prospective metallogenic belts in western, central and northeastern Türkiye. At Efemçukuru, drilling during the year focused on the resource expansion and resource conversion in the Kokarpinar and Bati vein systems. Drill-testing was conducted in the West vein area, including Muhtar, Huseyinburnu, Dedebag and Volkan veins. Drilling at regional early-stage targets included Kışladağ North, Ozan and Atalan properties in western and central Türkiye.

Canada

In eastern Canada, we are continuing to advance projects within our large land package in the Val-d’Or district surrounding the Lamaque Complex, and are also actively exploring in the Kirkland Lake district and at the Montgolfier project in the Casa Berardi belt. At the Lamaque Complex, we conducted underground resource conversion drilling of the Ormaque deposit throughout the year and published a resource update. Resource expansion drilling at Ormaque identified multiple lateral and depth extensions of the Ormaque mineralized zones to the north, northeast and southeast of the current resource. Drilling programs were also conducted at earlier-stage targets within the Sigma-Lamaque and Bourlamaque properties.

We are proud recipients of the [UL ECOLOGO®](#) certification, recognizing Eldorado Gold Québec for its application of best environmental and social practices in mining exploration.

Greece

Exploration work in Greece included underground expansion drilling in the East and West zones of the Olympias mine in Halkidiki. Surface exploration included an induced polarization geophysical survey and soil geochemistry at Olympias. Exploration supported geometallurgical drilling at the Skouries development project. Desktop and basic field activities were undertaken on earlier stage targets beyond the mine sites for potential future drill consideration.

Global

Our exploration teams continue to break new ground by integrating sustainability into project identification and evaluation. We continue to build strong relationships with the communities in which we operate.

SKOURIES

The Skouries development project is part of Eldorado's Kassandra Mines Complex on the Halkidiki Peninsula in northern Greece. As a world-class asset, this high-grade copper-gold porphyry deposit will be mined using a combination of conventional open pit and underground mining techniques. Once fully constructed, it is expected to produce an average of 140,000 ounces of gold and 67 million pounds of copper per year and will create significant positive economic and social value for host communities at the local and national level.

SAFE, INCLUSIVE AND INNOVATIVE OPERATIONS

Employees and contractors at Skouries participated in over **4,500 hours of safety training** and nearly **6,000 hours of job-specific training** in 2023. We have invested in a purpose-built training centre and tailored training programs delivered by experienced leadership that focus on health and safety, operational excellence and sound environmental practices based on internationally recognized best practices.

RESPONSIBLY PRODUCED PRODUCTS

Responsible gold production at Skouries will continue to create significant societal value, and the same high standards will be applied to produce copper that contributes to the supply chain of **critical minerals** for the low-carbon transition.

\$2 billion in revenue is expected to be generated for the Greek state over the life of mine through royalties, taxes and social contributions.

ENGAGED AND PROSPEROUS COMMUNITIES

\$80 million has been committed to community investment programs in Greece over the next 25 years, including infrastructure projects across local communities.

In support of this commitment, and with participation from local stakeholders, Hellas Gold allocated approximately \$1.99 million to community investment initiatives in 2023.

Approximately **5,000 direct and indirect jobs** will be created by the Kassandra Mines, of which approximately **1,400** positions will be required at Skouries throughout the life of mine.

\$4 billion worth of procurement revenue will be contributed to companies in Greece throughout the life of mine.

We are committed to **accessible and meaningful engagement** with host communities. We have established a Community of Interest Committee and implemented a new local community office in Palaiochori.

HEALTHY ENVIRONMENTS, NOW AND FOR THE FUTURE

Energy efficiency is actively being included in the design and construction of the Skouries project and there is a unique opportunity to incorporate energy and carbon management into a world-class asset that will produce copper needed for the low-carbon economy. For more information on how Eldorado is seeking to integrate Skouries within its Climate Change Strategy, click [here](#).

Dry-stack tailings will be implemented, making the tailings management process safer and providing environmental benefits compared to other options. For more information on the benefits of dry-stack tailings, click [here](#).

Concurrent reclamation will take place in parallel with mining activities.

The Kassandra Mines use a comprehensive, transparent and publicly available [Environmental Monitoring System](#) (EMS) to track air, soil and water quality; noise; seismicity; and various other ecological parameters. Over 600 monitoring stations and sensors operate continuously to provide data in real-time.

Our Approach to Responsible Mining

Our business is focused on breaking new ground at every stage in the mining lifecycle. From the initial relationships we build with local communities to implementing socially and environmentally responsible closure practices, we incorporate sustainability from the ground up and seek to find new ways to create value for our stakeholders. From our corporate vision to our management systems, we are committed to responsible mining as the foundation of our business.

Our corporate strategy is to build on our strengths, to grow our business and to deliver value today and for the future. The four pillars of our strategy include: safety and sustainability, people and capabilities, operational and project excellence, and financial strength and returns.

- Eldorado’s **Vision and Values** define our future as an organization and our approach to how we get things done
- Eldorado’s **Sustainability Framework** articulates what sustainability means to Eldorado
- Eldorado’s **Policies** define our commitments on specific sustainability-related topics
- Eldorado’s **Sustainability Integrated Management System (SIMS)** provides mandatory performance-based minimum standards that operationalize our Sustainability Framework and Policies across our global sites

OUR VISION AND VALUES

Our five core values are the foundation for how we do business, ignite our culture and underpin Eldorado’s vision of building a safe, sustainable and high-quality business in the gold mining sector, creating value today and for future generations.

OUR SUSTAINABILITY FRAMEWORK

Eldorado’s sustainability framework embodies our pledge to incorporate sustainability from the ground up in service of our corporate vision to build a safe, sustainable and high-quality business in the gold mining sector, creating value today and for future generations. This means we consider sustainability in everything we do, from exploration to closure, and in our relationships with communities, investors, customers and other important stakeholders. Our sustainability framework articulates four pillars that highlight our commitments across environmental, social and governance (ESG) indicators as detailed in this report. By delivering on these pillars, we believe we will continue to be a preferred partner for host communities and countries and have access to capital to enable us to grow our business for the benefit of all stakeholders. Our framework includes our commitments to deliver on the following:

OUR SUSTAINABILITY POLICIES

Eldorado’s policies and commitments provide the governance for making our vision, values and framework a reality. We recently updated our Health and Safety Policy, Environmental Policy and Human Rights Policy, and introduced a new Social Performance Policy, Respectful Workplace Policy and Supplier Code of Conduct. Our sustainability-related policies include:

- [Supplier Code of Conduct](#)
- [Anti-Bribery and Corruption Policy](#)
- [Code of Ethics and Business Conduct](#)
- [Diversity Policy](#)
- [Environmental Policy](#)
- [Health and Safety Policy](#)
- [Human Rights Policy](#)
- [Respectful Workplace Policy](#)
- [Shareholder Engagement Policy](#)
- [Social Performance Policy](#)

Our Sustainability Integrated Management System

Eldorado’s Sustainability Integrated Management System (SIMS) provides minimum performance-based standards for all Eldorado sites in the areas of occupational health and safety, environmental performance, social performance, security, and general management of sustainability topics.

SIMS was developed in alignment with internationally recognized standards, including the World Gold Council’s (WGC) [Responsible Gold Mining Principles \(RGMPs\)](#), the Mining Association of Canada’s (MAC) [Towards Sustainable Mining \(TSM\)](#), the [International Cyanide Management Code \(ICMC\)](#), and the [Voluntary Principles on Security and Human Rights \(VPSHR\)](#). It was also developed through a collaborative effort with direct participation from executive leadership, senior management, mine and country General Managers, corporate teams and a dedicated group of sustainability professionals from across Eldorado’s operating regions. SIMS is founded and fostered on Eldorado’s values and is a critical tool for driving sustainability performance across our business.

Following development of SIMS in 2020, we rolled out the standards across our operations and completed an initial round of SIMS self-assessments in 2021. These assessments have provided an initial baseline of conformance with the standards and were used to identify priority areas for continuous improvement. Every operation has since completed annual self-assessments. In 2022, we implemented our integrated assurance program and conducted our first SIMS Compliance Verification at Lamaque using internal and external auditors. Our second SIMS Compliance was conducted in 2023 at the Kassandra Mines, which included external assurance of Eldorado’s full conformance with the WGC RGMP Year 3 requirements and external verification of MAC-TSM results at the Olympias mine. Eldorado’s integrated verification process combines internal and external assurance relative to SIMS and the requirements of the international standards and programs to which we subscribe.

EXTERNAL FRAMEWORKS AND COMMITMENTS

Eldorado’s sustainability framework, policies and SIMS have been guided and informed by industry-leading frameworks.

Standards, Commitments and Certifications

We report in alignment with the following:

- [GRI \(Global Reporting Initiative\) Standards](#)
- [Sustainability Accounting Standards Board – Metals & Mining Standard](#)
- [United Nations Reporting Framework](#)

We participate in the following disclosures:

- [S&P Global Corporate Sustainability Assessment](#)
- [United Nations Global Compact – Communication on Progress](#)
- [CDP Climate Change, Water Security and Forests](#)

Our requirements are guided by the following:

- [International Finance Corporation’s Performance Standards on Environmental and Social Sustainability](#)
- [Mining Association of Canada’s Towards Sustainable Mining Framework](#)
- [Task Force on Climate-related Financial Disclosures](#)
- [United Nations Declaration on the Rights of Indigenous Peoples](#)
- [United Nations Guiding Principles on Business and Human Rights](#)
- [United Nations Sustainable Development Goals](#)
- [Voluntary Principles on Security and Human Rights](#)
- [World Gold Council’s Responsible Gold Mining Principles](#)

Our sites achieve certifications, which vary by site, such as:

- [World Gold Council’s Conflict-Free Gold Standard](#)
- [International Cyanide Management Code](#)
- [ISO 14001 Environmental Management Systems Standard](#)
- [ISO 39001 Road Traffic Safety Management Systems Standard](#)
- [ISO 45001 Occupational Health and Safety Management Systems Standard](#)
- [ISO 50001 Energy Management Systems Standard](#)

Memberships

Eldorado is also a member of several industry associations that assist in developing best practices and international standards, such as:

- [European Association of Mining Industries, Metal Ores & Industrial Minerals \(Euromines\)](#)
- [International Cyanide Management Institute](#)
- [Mining Association of Canada](#)
- [Prospectors & Developers Association of Canada](#)
- [Québec Mining Association](#)
- [Turkish Gold Miners Association](#)
- [World Gold Council](#)

SUSTAINABILITY CASE STUDY

ELDORADO’S SECOND SIMS COMPLIANCE VERIFICATION AT OLYMPIAS

In 2023, Eldorado conducted its second Sustainability Integrated Management System (SIMS) Compliance Verification at the Olympias mine and associated facilities, including the Kokkinolakkas Tailings Management Facility. The verification measured the site’s progress on implementing Eldorado’s performance standards across health, safety, environment, social, security and general sustainability topics, as well as compliance with jurisdictional regulatory requirements and internationally recognized voluntary standards.

The verification provided us with another opportunity to bring our operational and corporate teams together for a week of collaboration and learning after months of preparation. The Hellas Gold team welcomed professionals and subject matter experts from Efemçukuru and Kışladağ in Türkiye and Lamaque in Québec, who comprised the Verification Team. The SIMS Control Team, composed of corporate SIMS Leadership, oversaw the verification process. We also hosted a team of external auditors tasked with independently verifying the Olympias mine’s self-assessed conformance with the RGMP requirements and MAC-TSM Protocols.

Our SIMS Compliance Verifications consist of document and database reviews, interviews with key site and management personnel, and involve comprehensive tours and inspections of the mine site. The effectiveness of corrective actions implemented as a result of previous self-assessments was also evaluated.

At the end of each day, the Verification Team documented and debriefed on their findings and discussed key learnings. The verification concluded with a presentation of findings that included the identification of many notable and best practices. The Hellas Gold team was open, transparent and happy to receive recommendations. Despite the comprehensiveness and level of rigour exercised during the verification, all participants agreed that the regular process is lending to a positive culture shift of continuous improvement and that one of our greatest opportunities with SIMS is interdisciplinary collaboration.

Olympias (currently the Kassandra Mines’ only operational site) achieved minimum Level A or Yes across nearly all TSM performance indicators in 2023, including Level AAA for Biodiversity Conservation Management

and Tailings Management, with the exception of Level B for one indicator regarding community impact and benefit management. These results are based on a verified assessment by the external verifiers. Olympias’ complete TSM results for 2023 are available at www.mining.ca/companies/eldorado-gold. As part of our integrated process, we also received verification of full conformance against the Year 3 requirements of the RGMPs.

The next SIMS Compliance Verification will be held at our Turkish operations, Efemçukuru and Kışladağ, in 2024. We are excited to continue bringing our people together through the implementation of SIMS across our global operations toward excellence in sustainability.

Stratoni village, Greece

UN SUSTAINABLE DEVELOPMENT GOALS

The 17 United Nations (UN) Sustainable Development Goals (SDGs) were adopted by all UN member states in 2015 to provide a shared blueprint and set targets for peace and prosperity for people and the planet. We have embedded the SDG targets into the methodology of our materiality assessment, which has helped us to identify the SDGs where we can have the greatest impact for the communities and countries where we operate.

Occupational Health and Safety

Good Health and Well-being

SDG 3.3: By 2030, end the epidemics of AIDS, tuberculosis, malaria and neglected tropical diseases, and combat hepatitis, waterborne diseases and other communicable diseases

SDG 3.6: By 2030, halve the number of global deaths and injuries from road-traffic accidents

SDG 3.9: By 2030, substantially reduce the number of deaths and illnesses from hazardous chemicals and air, water and soil pollution and contamination

Eldorado’s Progress

Eldorado promotes a strong, company-wide workplace health and safety culture:

- We follow the hierarchy of controls to reduce occupational exposures to as low as reasonably practicable and establish industrial hygiene programs based on site-specific risk
- Workers are provided with healthy food options at remote locations, annual health check-ups, and regular health and safety training
- We continuously work to improve road safety on and off site, certify environmental and occupational health and safety management systems, and invest in community health programs and infrastructure

We continue to invest in initiatives in our host communities intended to improve the health and well-being of those around us. In 2023, Eldorado continued to support community health and well-being initiatives, as part of our community investment strategy. For more information, click [here](#).

Inclusive Diversity

Gender Equality

SDG 5.1: End all forms of discrimination of women and girls everywhere

SDG 5.5: Ensure women’s full and effective participation and equal opportunities for leadership at all levels of decision-making in political, economic and public life

Eldorado’s Progress

In 2023, Eldorado’s Board was composed of 56% female directors. We also updated our Diversity Policy, which includes an aspirational target to maintain 30% women on our senior management team. By doing so, we are:

- Promoting a workplace free from gender-based discrimination (see our [Respectful Workplace Policy](#))
- Implementing our [Diversity Policy](#) and [Code of Ethics and Business Conduct](#)
- Promoting opportunities for women that foster career advancement

At Lamaque, we continued providing support to parents in our workforce, including improved access to paid daycare that fosters equal opportunity and participation, and, in a first for Eldorado, we welcomed two female professionals from Chile to join our ranks through the Artemisa Mining Challenge. Beyond the mine at Efemçukuru and Kışladağ, we focused on delivering our “Productive Women, Strong Futures” and “Women Entrepreneur Vision” programs through providing long-term support for entrepreneurship and mentorship opportunities to local women. More information can be found in the [Inclusive Diversity](#) and [Engaged and Prosperous Communities](#) sections of this report.

Water

Clean Water and Sanitation

SDG 6.3: By 2030, improve water quality by reducing pollution, eliminating dumping and minimizing release of hazardous chemicals and materials; halve the proportion of untreated wastewater; and substantially increase recycling and safe reuse globally

SDG 6.4: By 2030, substantially increase water-use efficiency across all sectors and ensure sustainable withdrawals and supply of freshwater to address water scarcity and substantially reduce the number of people suffering from water scarcity

Eldorado’s Progress

Eldorado works to manage our water consumption while collaborating with local communities and governments by:

- Giving preference to dry-stack tailings in mine design, where feasible
- Recycling water at our sites
- Treating contact water prior to discharge
- Conducting research and engineering to improve efficiency and reduce consumption
- Conducting comprehensive site monitoring of water sources (upstream and downstream)
- Collaborating with community and government representatives to monitor water at sites
- Annual public water reporting
- Reducing, recycling and reusing water wherever possible

In 2023, Kışladağ continued its long-term support for maintaining and repairing critical infrastructure in local communities, with the goal of having access to fresh potable water now and into the future.

Local Employment and Procurement

Decent Work and Economic Growth

SDG 8.2: Achieve higher levels of economic productivity through diversification and technological upgrading and innovation, including a focus on high value-added and labour-intensive sectors

SDG 8.5: By 2030, achieve full and productive employment and decent work for all women and men, including young people and persons with disabilities, and equal pay for work of equal value

SDG 8.7: Take immediate and effective measures to eradicate forced labour, end modern slavery and human trafficking, and secure the prohibition and elimination of the worst forms of child labour, including recruitment and use of child soldiers, and by 2025, end child labour in all its forms

SDG 8.8: Protect labour rights and promote safe and secure working environments for all workers, including migrant workers, in particular female migrants, and those in precarious employment

Eldorado’s Progress

Eldorado actively builds the conditions under which sustainable economic growth can occur by:

- Providing well-paying jobs, supporting local businesses and collaborating with local chambers of commerce and governments to diversify economic growth
- Providing training and capacity-building assistance to help local businesses, suppliers, contractors and employees develop skills that can be transferred to other opportunities and grow local economies

Our commitment to local employment and procurement is formalized in our new [Social Performance Policy](#). We prioritize local employment everywhere we operate. In 2023, 79% of our workforce was employed from communities local to our sites and offices and our domestic procurement spend was approximately \$693 million. Our efforts to eradicate child and forced labour are supported in our [Supplier Code of Conduct](#).

Community Investment

Industry, Innovation and Infrastructure

SDG 9.1: Develop quality, reliable, sustainable and resilient infrastructure, including regional and transborder infrastructure, to support economic development and human well-being, with a focus on affordable and equitable access for all

SDG 9.3: Increase access for small-scale industrial and other enterprises, in particular in developing countries, to financial services including affordable credit, and their integration into value chains and markets

SDG 9.4: By 2030, upgrade infrastructure and retrofit industries to make them sustainable, with increased resource use efficiency and greater adoption of clean and environmentally sound technologies and industrial processes, with all countries taking action in accordance with their respective capabilities

Eldorado’s Progress

Eldorado makes significant investments in infrastructure to transport materials, water, energy and information to our locations by:

- Prioritizing local procurement and training, building infrastructure, innovation and industry
- Partnering with local businesses and universities, we promote research and development, and invest in local infrastructure such as public roads and water supply lines that are fundamental to achieving the SDG targets

In 2023, Eldorado contributed approximately \$4.29 million in local communities to support various efforts, including strategic community investments aimed at building and supporting the economic development of local women, repairing community infrastructure, and donating educational materials. However, our contributions reach beyond donations and include investments aimed at building local capacity in our host communities, such as providing access to education and professional training opportunities.

Responsible Sourcing

Responsible Consumption and Production

SDG 12.2: By 2030, achieve the sustainable management and efficient use of natural resources

SDG 12.4: By 2030, achieve the environmentally sound management of chemicals and all wastes throughout their lifecycle, in accordance with agreed-upon international frameworks, and significantly reduce their release to air, water and soil in order to minimize their adverse impacts on human health and the environment

SDG 12.6: Encourage companies, especially large and transnational companies, to adopt sustainable practices and to integrate sustainability information into their reporting cycle

Eldorado’s Progress

Eldorado seeks to responsibly produce materials that help create socio-economic benefits fundamental to healthy communities and transitioning to a lower-carbon economy. Our business is focused on responsibly and sustainably creating value from natural resources, and we seek to adopt international best practices wherever we operate.

In 2023, Eldorado had no major environmental incidents across our operations. Moreover, we continued to implement our Climate Change Strategy and advanced the development of a mitigation pathway toward our GHG emissions target to mitigate our contribution to climate change and continue building a responsible and resilient business. We also completed assurance against the WGC’s Conflict-Free Gold Standard (CFGS) for our 2022 operations and full conformance to RGMP Year 3 requirements (click [here](#) to read Eldorado’s Year Three RGMP Report).

Our Sustainability Materiality Approach

Eldorado’s annual Sustainability Report provides an opportunity for the Company to comprehensively address the sustainability-related issues and topics that are most material to our business and have the greatest impacts on society, the environment and economies.

In addition to our continuous monitoring of material issues, a formal assessment allows us to map the topics most important to our stakeholders and identify issues across our operating regions. This broad view provides valuable insights into our business and is the foundation of this Report.

DEFINING MATERIALITY

In accordance with guidance provided by the GRI Standards, this Report continues to define a “material topic” as a matter that reflects the Company’s significant economic, environmental and social impacts, or a matter that could substantively influence the assessments and decisions of our stakeholders. The GRI Standards’ externally focused definition of materiality forms Eldorado’s understanding of material topics for this Report.¹ In addition to the GRI Standards’ materiality assessment methodology, we continued to measure each topic’s “importance to the business” as a third dimension in our own sustainability materiality, to provide a transparent view of internal priorities to our stakeholders. This existing approach is also aligned with the material issues identified by SASB for the metals and mining industry.

We are currently seeking to update our methodology for materiality assessment to align with new internationally accepted and legislated standards, including the European Union’s Corporate Sustainability Reporting Directive (CSRD) which applies the “double materiality” concept. This work is planned to commence in 2024 and we will seek to produce future sustainability disclosures in accordance with these standards and other relevant disclosure obligations.

¹ The filing of this Report and the topics and information included are not, and should not be construed as, an admission by the Company that such matters are material within the meaning of Canadian securities laws.

DETERMINING MATERIALITY

Using Eldorado’s existing approach, materiality assessments are to be conducted on a three-year rolling basis to identify the topics that will be featured in our Sustainability Report. Every third year, engagements are to be held with a broad group of internal and external stakeholders, and in interim years, we update materiality assessments internally and rely on publicly available external information. Each of the identified material topics is assessed in relation to the [UN SDG Sustainable Development Index](#) to determine Eldorado’s impacts across our operating regions. Senior management then reviews the material topics with consideration to our impacts and influence. This materiality assessment process creates additional value for Eldorado by:

- Providing a structure and mandate for managing the most important ESG topics for our business and our stakeholders
- Adding data-driven support for the purpose and direction of our internal and external engagement initiatives
- Being a tool to map material topics to enterprise risks, ensuring they are considered

In 2023, Eldorado opted to conduct another internal-only update to its materiality assessment and defer a full update according to the three-year methodology described above. We did so after determining that it would be more appropriate to focus our resources on the creation and adoption of a standardized materiality methodology that is in conformance with leading and upcoming mandatory reporting requirements.

Lamaque, Québec

MATERIALITY PROCESS

1. Preliminary Desktop Assessment

Eldorado consistently monitors news related to our business, industry peers, and the economic, social and environmental issues facing communities and governments in our operating regions to maintain an understanding of what is material for our stakeholders. With this background knowledge, we define the purpose and context of our materiality assessment. Taking results from the previous year's materiality assessment as a starting point, we review peer, industry and media reports and internal documents to identify a list of material topics for inclusion in the assessment.

2. Designing the Materiality Assessment

We identify internal and external stakeholders, design survey questions and refer to external sources such as the SDGs to inform the design and content of our assessment. A well-designed assessment process allows us to accurately understand our impacts and influence.

3. Conducting Business Impact Assessments

We engage with senior executives and management across corporate, regional and site offices, including professionals responsible for overseeing social, environmental and economic performance at each site. Respondents are asked to rank material topics based on their impacts on society, the environment and the economy as well as Eldorado's business as a sustainable mining company.

4. Determining External Impacts

We measure the salience of our impacts in the countries where we operate using the SDG Sustainable Development Index. The SDG Index assesses countries based on their progress toward each of the 17 SDGs and assigns a score for each country's performance on each SDG. This tool helps us to understand where we have the greatest impacts across all of our operations by identifying the SDGs to which we can most significantly contribute.

5. Compiling Results and Creating a Matrix

We map issues onto a materiality matrix to communicate their relative importance, identify those that have significantly changed since the previous assessment, and identify those that may require further management attention and action.

6. Validating and Reporting Results

We review the results of our materiality assessment internally and establish how to present the material topics to be included in the Report. Topics that fall within our reporting threshold of moderate to high materiality form the areas of focus for this Report. For each topic that surpasses the threshold, we describe our management approach and provide performance data and analysis. Although topics that surpass the materiality threshold comprise the majority of the content of this Report, we discuss our management approach and at times provide data for other topics as they may be particularly salient to certain groups of stakeholders or within certain operating regions.

MATERIALITY MATRIX

LEGEND

- **Importance to our business (Y axis):** reflects the influence and importance each topic has on Eldorado as a sustainable mining company
- **Importance to our stakeholders (X axis):** reflects the influence and importance each topic has across all stakeholder groups surveyed
- **Bubble size:** indicates Eldorado’s impact on society, the environment and economy for each topic as measured by our potential contributions to the UN SDGs Index scores for our operating countries

While we have presented each material topic relative to others, all of the topics above are considered “material topics” per GRI and SASB reporting standards and are considered important to our business and our stakeholders. Eldorado seeks to be a leader in responsible mining in each of these areas.

- Safe, Inclusive and Innovative Operations
- Responsibly Produced Products
- Engaged and Prosperous Communities
- Healthy Environments, Now and For the Future
- Other

Our Performance Targets

Every year we set ambitious goals for sustainability performance, management and governance, and work to integrate sustainability into our business.

2023 SUSTAINABILITY ACHIEVEMENTS

In 2023, Eldorado continued implementation of SIMS by conducting the second SIMS Compliance Verification at Olympias in Greece, receiving assurance of full conformance with the RGMPs, and achieved no fatalities or major environmental and social incidents. We progressed implementation of our Climate Change Strategy across our operations and at the corporate level through continued realization of GHG emissions mitigations toward our target, integration of energy and carbon into regular business activities, and taking the first steps to update our climate risk assessments.

While we did not achieve our TRIFR target, we surpassed our LTIFR performance target with our lowest LTIFR since we began reporting in 2012. We continue to focus on strengthening our safety culture through workforce safety engagements and the implementation of health and safety tools such as the Health and Safety Workcard and *Golden Rules Health & Safety Handbook*.

Eldorado has established ambitious goals for sustainability performance, management and governance, and we continue to work to integrate sustainability into our business. Placing an emphasis on sustainability in our corporate scorecard is an important indication of our commitment to responsible mining, and reinforces our values to our stakeholders. For further information on how our targets are tied to compensation, please see our annual [Management Proxy Circular](#).

1 The development of Global Sustainability Goals was removed as a target in Eldorado's 2023 scorecard following Board approval of the decision to prioritize work on implementing improved data management systems as a prerequisite.

● Achieved ○ Not Achieved

Goal	2023 Targets	Achievement	Highlights
Reduce LTIFR	Operated sites: 0.42 Skouries: 1.90	○	In 2023, our LTIFR at our operations (Kışladağ, Lamaque, Efemçukuru Olympias and Stratoni) was 0.50 and TRFIR was 4.85. Skouries recorded an LTIFR of 2.11 and a TRIFR of 5.27. We remained focused on strengthening health and safety performance, specifically at our Kassandra Mines sites, and continued implementing safety training programs and technologies discussed in this Report to further advance our ultimate goal of eliminating fatalities, serious injuries and occupational diseases.
Reduce TRIFR	Operated sites: 4.12 Skouries: 4.74		
Leadership safety engagements	Conduct leadership safety engagements across operations	●	Leadership safety engagements were conducted across operations throughout the year, including regular person-to-person conversations about observations and safer ways to work, and continued targeted toolbox talks around appropriate use of tools and equipment and hand safety.
Progress SIMS implementation and performance ¹	- Conduct SIMS Compliance Verification for Kassandra Mines - Obtain external assurance against Year 3 RGMP progress and issue Year 3 RGMP Report demonstrating full conformance - Conduct Independent Tailings Review Board (ITRB) site visits	●	We successfully completed our second SIMS Compliance Verification at the Kassandra Mines, which included external verification of performance against the MAC-TSM Protocols at Olympias and assurance of full conformance with Year 3 RGMP requirements, as disclosed in our Year 3 RGMP Report. ITRB visits were completed, along with Dam Safety Reviews of key assets.
Progress Climate Change Strategy implementation	- Progress toward our 2030 emissions mitigation target - Develop climate risk adaptation criteria for operations - Integrate energy and carbon into regular operations meetings and business planning	●	Implementation of Eldorado's GHG Emissions Target Achievement Pathway progressed, building on the GHG emissions mitigations achieved in 2022. Our global site and corporate teams worked to integrate energy and carbon into regular business activities, including regular operations meetings and annual business planning, while climate risk adaptation criteria were established at our sites in preparation for updated climate risk assessments.
Zero fatalities	Zero fatalities	●	Eldorado recorded zero fatalities in 2023. Eldorado has not recorded a fatality since 2017.
Zero major environmental and social incidents	Zero major environmental and social incidents	●	Eldorado recorded zero major environmental and social incidents in 2023.

2024 SUSTAINABILITY TARGETS

In 2024, we are working to advance our performance and management of key strategic areas across our Sustainability Framework, with an increased focus on leading indicators.

Goal	2024 Targets
Reduce LTIFR	Operated sites: 0.42 Skouries: 1.90
Reduce TRIFR	Operated sites: 4.12 Skouries: 4.74
High Potential Risk Control	Develop a revised definition for High Potential Incidents (HPI)
Safety Leadership and Engagement	Refine Leadership Safety Engagement practices and develop Courageous Safety Leadership program
Progress SIMS implementation and performance	Conduct SIMS Compliance Verifications at Kışladağ and Efemçukuru and continuously improve SIMS
Progress Climate Change Strategy implementation	Update climate risk assessments globally and continue advancing our GHG Emissions Mitigation Pathway
Zero fatalities	Zero fatalities
Zero major environmental incidents	Zero major environmental incidents

Long-term Incentive Plan

In 2024, Eldorado’s Compensation Committee approved the addition of a climate metric within the Performance Share Unit (PSU) scorecard. The climate metric will represent 10% of the PSU scorecard for PSUs granted in 2024.

Efemçukuru, Türkiye

Governance and Transparency

Central to Eldorado’s record as a trusted operator is our commitment to ethical business practices and high standards of corporate governance. We recognize the importance of having an integrated approach to managing our operations, risks and relationships.

BOARD OF DIRECTORS

Eldorado’s Board is responsible for overseeing corporate governance. Their [Terms of Reference](#) explicitly require the Chair of the Board and all members of Board committees to be independent. The Board works with senior management to set long-term goals, develop strategy and monitor Eldorado’s progress toward achieving its goals, while providing independent and objective advice. They regularly evaluate our principal business risks and monitor the effectiveness of our risk management process. Our Board includes the following five committees:

- Audit
- Compensation
- Corporate Governance and Nominating
- Sustainability
- Technical

The Corporate Governance and Nominating Committee annually evaluates the performance of the Board and its committees and directors. [Mr. Steven Reid](#) serves as Chair of the Board. More information on our Board committees is available on our website at www.eldoradogold.com/about-us/leadership/boardcommittees.

For current information on the Board of Directors and Board Committees, please see Eldorado’s annual [Management Proxy Circular](#).

The Sustainability Committee oversees our policies, programs, practices and disclosures in the areas of environment, tailings management, sustainable development, climate change, health and safety, social performance, community relations, human rights and security. The Committee seeks assurance that Eldorado consistently promotes ethical, transparent and responsible behaviour, and meaningfully engages its stakeholders and communities. All committee members are independent.

SUSTAINABILITY GOVERNANCE STRUCTURE

The Sustainability Committee receives quarterly reports for all sites and works with Eldorado leadership to suggest directives for senior management to pursue. The Board, including members of the Sustainability Committee, periodically visit our sites for first-hand validation and interaction with our operations personnel.

In 2023, the Sustainability Committee met at the end of each quarter to review Eldorado’s evolving sustainability performance and progress on key developments. The Committee continued to place significant attention on the advancement of Eldorado’s Climate Change Strategy, and jointly with the Technical Committee oversaw the implementation of Eldorado’s Tailings Stewardship Program. The Committee also oversaw the development of the Environmental and Social Management System (ESMS) and Environmental and Social Action Plan (ESAP) at Hellas Gold.

SENIOR MANAGEMENT

Accountability for social, environmental, and health and safety performance ultimately rests with our [President & Chief Executive Officer \(CEO\)](#) while our [Executive Vice President, Technical Services and Operations \(EVP, Technical Services & Operations\)](#) has oversight at the corporate level. The [Executive Vice President, Development, Greece \(EVP, Development, Greece\)](#), [Vice President & Country Manager, Canada \(VP & Country Manager, Canada\)](#), and [Vice President & Country Manager, Türkiye \(VP & Country Manager, Türkiye\)](#) have oversight in-country. In addition to frequent site visits, our senior management team collectively aims for open communication and appropriate oversight through regular reporting on sustainability-related matters, including health and safety, environmental and social performance. Eldorado’s [Vice President, Health, Safety & Sustainability \(VP, Health, Safety & Sustainability\)](#) and Mine General Managers report through the EVP, Technical Services & Operations, and along with site Health, Safety & Sustainability teams, they are responsible for delivering on and adhering to our Sustainability Framework through the implementation of our Sustainability Policies and SIMS.

In 2023, senior management at the corporate and in-country levels worked to advance SIMS and Eldorado’s Climate Change Strategy, with involvement from sustainability, operations and engineering teams. This work included a global effort to conduct Eldorado’s second SIMS Compliance Verification at the Cassandra Mines and involved collaboration with teams across operating sites to action key Energy and Carbon Management System (ECMS) projects, as part of implementing Eldorado’s GHG Emissions Target Achievement Pathway.

GOVERNANCE POLICIES

Our [Code of Ethics and Business Conduct](#), [Anti-Bribery and Corruption \(ABC\) Policy](#), [Human Rights Policy](#), [Insider Trading Policy](#) and Disclosure Policy reinforce our standards and values and outline our expectation that employees and suppliers operate in accordance with the highest standards of legal and ethical behaviour. In 2022, we updated our [Health and Safety Policy](#), [Environmental Policy](#) and [Human Rights Policy](#) and introduced a new [Social Performance Policy](#) and a new [Respectful Workplace Policy](#), which outline our commitments to protecting the environment and the safety of our people and neighbours.

In 2023, we completed a regular review of the Code, ABC Policy, Insider Trading Policy and Disclosure Policy. Updates were made to the Code, Insider Trading Policy and Disclosure Policy to align with best practices and internal management practices. We also adopted a Supplier Code of Conduct that outlines Eldorado’s expectations for suppliers to align with our standards on topics including business ethics, health, safety, labour relations, human rights, environment and social performance. A worker handbook was developed and distributed to all employees as a resource to support our collective understanding of all of Eldorado’s Global Policies and how they are applied.

SUSTAINABILITY FACTORS IN COMPENSATION

Our people are responsible for our success. Actively working on our organizational culture is therefore critical to executing on our goals. Guiding culture requires ongoing performance conversations to stay focused on results.

Health, safety and environmental performance indicators and social performance measures are embedded in the evaluation of corporate and personal performance and are directly tied to awards paid under the Short-Term Incentive Plan. ESG objectives made up 30% of the 2023 corporate scorecard resulting in a direct impact on short-term incentive compensation. In addition, sustainability goals are measured within personal performance scorecards for senior management. Combined, ESG metrics account for up to 30% of senior management short-term compensation.

In 2023, we set new targets to continue promoting multi-year and strategic sustainability programs including implementation of SIMS, achieving full conformance to the RGMPs, and implementation of Eldorado’s Climate Change Strategy. For further information on sustainability factors in compensation, please see Eldorado’s annual [Management Proxy Circular](#).

ELIMINATING BRIBERY AND CORRUPTION

As a Company that generates significant local employment and government revenue, Eldorado has the ability to influence anti-bribery and anti-corruption behaviour and positively contribute to respect for the rule of law where we operate. Eldorado and its subsidiaries are required to comply with all applicable anti-corruption and anti-bribery laws and regulations. Our [Anti-Bribery and Corruption Policy](#) has been in place since 2015, was updated in 2022 and underwent an annual review in 2023. The policy formalizes our commitments and expectations of our employees and contractors that Eldorado complies with applicable anti-bribery and anti-corruption laws. It also encourages staff to be alert to potential violations of applicable laws by Eldorado’s personnel or independent representatives, distributors, consultants or agents. In 2023, we also implemented formal Gifts and Entertainment Procedures at our corporate offices in Vancouver and Amsterdam.

Directors, officers and Country General Managers who are responsible for overseeing employees in foreign jurisdictions where we operate must sign a compliance certificate, stating that such individuals understand the Company’s [Code of Ethics and Business Conduct](#) and all other applicable Company policies and will follow them. Copies of these policies are posted at each of our sites in communal work areas and on noticeboards. The policies are overseen by Eldorado’s Corporate Secretary and Ethics and Compliance team. Issues of concern can be reported to the Board via the Chair of the Audit Committee or by using the whistleblower reporting agency at www.eldorado.ethicspoint.com.

Eldorado actively works to ensure that our workforce is aware of our commitments and their responsibilities regarding anti-bribery and anti-corruption. Our most recent Integrity Survey in 2022 found that 90% of participants agreed that Eldorado has clear standards for ethical behaviour and believe we foster a culture of integrity. In 2023, we launched refresher training on our Code of Ethics and Business Conduct to ensure we all understand the role we play in maintaining this culture, which included topics such as acting with honesty and integrity, recognizing and declaring conflicts of interest in accordance with our [Anti-Bribery and Corruption Policy](#), and enabling a safe, healthy and respectful work environment.

In 2023, no legal actions were taken against Eldorado related to bribery, corruption, anti-competitive behaviour, anti-trust or monopoly practices.

TRANSPARENCY OF PAYMENTS TO GOVERNMENTS

Eldorado supports the elimination of bribery and corruption by disclosing our payments to governments in accordance with applicable legislative requirements.

Payments to governments vary over time as a result of changes to our business, changes to regulations and tax regimes, and broader market conditions.

Transparent and fairly collected tax revenues and other royalties allow governments to build stable political institutions and invest in sustainable development. Revenue transparency is also an important part of maintaining honest relationships with our investors and other stakeholders, and we believe that disclosure of payments made to governments is an important part of a broad industry mandate to fight corruption. Canada and the European Union (EU) have passed laws that require mandatory public reporting of payments to governments by the extractive sector – [Canada’s Extractive Sector Transparency Measures Act \(ESTMA\)](#), which came into force on June 1, 2015; and the [EU’s Transparency and Accounting Directives \(EU Directives\)](#), introduced in 2013.

Eldorado files an annual report under ESTMA, which covers payments over \$10,000 made to all levels of foreign and domestic governments. This report summarizes Eldorado’s payments of taxes, royalties, fees, bonuses, production entitlements, dividends and other categories of payments prescribed by ESTMA. The latest report is publicly available on our website at www.eldoradogold.com/investors/financial-information/ESTMA.

Safe, Inclusive and Innovative Operations

People are at the core of our business. By keeping our people safe, providing well-paid jobs and fostering inclusivity and diversity in our workforce, our operations contribute to the social and economic development of the communities in which we work.

DECENT WORK AND ECONOMIC GROWTH

Lamaque, Québec

Occupational Health and Safety

Protecting the health and safety of our employees, contractors, suppliers and communities is our first priority and a cornerstone of our operating philosophy. We are focused on driving an engaged safety-first culture, as part of our commitment to eliminating fatalities, serious injuries and occupational diseases.

High-risk and safety-sensitive activities are identified in Eldorado’s *Golden Rules Health & Safety Handbook*, which provides requirements for health and safety risk identification and management. Every person entering an Eldorado site – employees, contractors, visitors or otherwise – is required to carry a copy of the *Golden Rules Health & Safety Handbook*.

ELDORADO’S GOLDEN RULES COVER:

Driving Safety

Ground Stability

PPE

Lifting, Rigging and Hoisting

Fit for Work

Working at Height

Tools and Equipment

Energy Isolation

Work Permits

Hazardous Substances

Health and safety risks that may cause disease and injury related to work activities are addressed in our health and safety risk register. We continue to use our *Golden Rules Health & Safety Handbook* to facilitate on-field discussions and engagement around critical controls.

RESPONSIBILITY FOR SAFETY

At each of our sites, health and safety teams and site management are responsible for the day-to-day oversight, implementation and management of our health and safety policies, programs and activities. Each team reports directly to its Mine General Manager and country-level oversight is provided by the EVP, Development, Greece, VP & Country Manager, Canada, and VP & Country Manager, Türkiye. The EVP, Technical Services & Operations, supported by the VP, Health, Safety & Sustainability, oversees safety

objectives and targets, engages directly to support health and safety management systems, and reviews safety performance across the Company.

Health and safety incidents resulting in a recordable injury or a PFO are reported to the Company’s management as well as health and safety teams across our operating regions. Eldorado encourages and facilitates the sharing of health and safety information including near misses, high-potential injuries, and learning opportunities across our operating regions to build knowledge of health and safety practices throughout the Company. Eldorado’s President & CEO is ultimately accountable for our safety performance. At the Board level, the Sustainability Committee has oversight of health and safety performance and activities. Regular health and safety reports are prepared by each site and region. Eldorado’s safety statistics are reported internally on a regular basis and can be viewed in the table below.

TABLE 1: HEALTH AND SAFETY REPORTED INCIDENTS

	Definition	2023	2022	2021
Near misses ¹	An incident which, in different circumstances, could have resulted in harm to people, damage to property or loss to a process	256	241	269
First aid incidents	Care is provided to a person who is injured or who suddenly becomes ill (e.g., disinfecting a cut, applying a bandage, treating a sunburn, etc.)	193	167	148
Total recordable injuries		44	43	52
Medical treatment injuries	Any injury or disease that resulted in basic treatment (not first-aid treatment) given by a physician or other medical personnel (e.g., prescription medication, sutures, therapeutic treatment, etc.)	24	20	23
Restricted work injuries	An injury or disease that results in a person being unable to perform their normal duties, including temporary or permanent transfer to another job	14	12	21
Lost-time injuries	A work-related injury or disease that resulted in lost time from scheduled work of at least one day or shift, a permanent disability or a fatality	6	11	8
Fatalities	Death resulting from a work-related incident or disease	0	0	0

¹ 2021 figure has been restated from 2021 Sustainability Report.

HEALTH AND SAFETY MANAGEMENT SYSTEMS

Eldorado’s SIMS contains occupational health and safety standards that set minimum performance requirements for all Eldorado sites. SIMS actions our corporate [Health and Safety Policy](#) and drives safety performance across the Company. Site-specific health and safety targets are defined annually and included in executive compensation.

Our Kışladağ and Efemçukuru mines in Türkiye and the Cassandra Mines in Greece are independently certified to [ISO 45001](#). MAC’s [Safety and Health Protocol](#) will be implemented across our operations as part of Eldorado’s broader adoption of the Towards Sustainable Mining program within SIMS.

Our Health and Safety Policy includes elements of a strong safety culture including management team and workforce engagement, use of leading indicators, and celebrating successes, collaboration and innovations. Each site also completed a SIMS self-assessment to evaluate current alignment with SIMS and develop corrective action plans to drive continuous improvement. SIMS Compliance Verifications have been conducted at Lamaque and the Cassandra Mines in 2022 and 2023, respectively, to verify compliance against Eldorado’s minimum performance standards for health and safety, as well as the MAC-TSM [Safety and Health Protocol](#), the results of which were externally verified and are available [here](#).

In practice, this work also includes tracking leading indicators such as corrective actions following preventative inspections to emphasize and build a culture of proactive health and safety management. Eldorado achieved a corrective action efficiency rate of 85% by the end of 2023, a decrease from 97% in 2022, yet still exceeding our internal target of 70%.

Eldorado continues to focus on strengthening its health and safety culture. In 2023, our LTIFR for operations (Kışladağ, Lamaque, Efemçukuru, Olympias and Stratoni) was 0.50 – a 63% year-over-year reduction. Zero lost-time injuries were recorded at Kışladağ for the fourth consecutive year; however, Efemçukuru and Lamaque recorded their first LTIs in five and four years, respectively. While we achieved our 2023 LTIFR target for operations, we missed our 2023 TRIFR target for operations and both our 2023 LTIFR and 2023 TRIFR targets for Skouries. While the most common Golden Rule infractions recorded across operations during the year were associated with the “Tools & Equipment” category, Olympias recorded a significant decrease in lost-time incidents associated with this Golden Rule. Eldorado has not recorded a fatality since 2017.

Our global site teams continued to deliver corrective actions through leadership safety engagements and targeted toolbox talks around appropriate use of tools and equipment and hand safety. We recognize that we will always have room to improve our health and safety performance and that building a culture of safety takes time. We are proud of our teams for their continued dedication to operating safely and we will continue to focus on engaging across our workforce and implementing proactive measures as we strive toward eliminating fatalities, serious injuries and occupational diseases. Looking forward, we will seek to increase our focus on leading indicators, incident investigation and the concept of high potential for safety incidents, to foster a deeper understanding of incident root causes toward incident prevention.

TABLE 2: SAFETY PERFORMANCE (EMPLOYEES AND CONTRACTORS)

Region	Asset	Hours Worked (million)	LTIFR ¹	TRIFR ¹	Near Miss Frequency Rate ²
Türkiye	Kışladağ	2.57	0.00	0.78	2.41
	Efemçukuru	1.80	0.55	6.09	14.85
	Ankara Office	0.09	0.00	0.00	0.00
Canada	Lamaque Complex	1.45	0.69	7.60	7.73
Greece	Stratoni	0.56	1.79	3.59	2.15
	Olympias	1.66	0.60	7.82	2.41
	Skouries	0.95	2.11	5.27	1.90
	Perama Hill	0.03	0.00	0.00	0.00
	Athens Office	0.06	0.00	0.00	0.00
Romania	Certej	0.16	0.00	0.00	0.00
Exploration		0.12	0.00	0.00	0.00
2023 Total		9.46	0.63	4.65	5.41
2022 Total		9.21	1.19	4.67	5.23
2021 Total		9.07	0.88	5.73	5.93

¹ Per 1,000,000 hours worked.
² Per 200,000 hours worked. Near miss frequency rate for 2021 is restated from 2021 Sustainability Report.

SUSTAINABILITY CASE STUDY

SAFETY TALK

Building and maintaining a culture of safety starts with raising awareness and talking about it openly and candidly.

Our operations in Québec launched a health and safety awareness campaign during the year with the theme, “Your health and safety, everyone thinks about it. And you, do you think about it?” The objectives of the campaign were to unearth the intrinsic value of committing to working safely and reinforce our shared sense of responsibility to keeping one another safe, starting with ourselves. Simply put, we wanted to remind our people that their well-being is important not only to us and their colleagues, but especially their families and friends, and that by working safely, they are able to enjoy good health beyond the workplace. As Sylvain Lehoux, Vice President and Country Manager, Canada, said, “Why should you commit to working safely? To come home and enjoy life with your loved ones.”

In Türkiye, our teams focused on leadership safety engagements, where on-site leaders created opportunities to reinforce expectations through simple one-on-one or small group engagements. These regular communications included sharing current observations to start a conversation about safety, having open discussions for feedback on safer ways to work, and gaining both coaching opportunities for

and personal commitments from workers. The teams also implemented SLAM Cards to all employees and contractors as part of worker PPE, which are meant to serve as a reminder to continuously assess the work environment for safety.

SLAM stands for:

STOP and engage your mind before your hands by looking at each task and following a checklist that will ensure a safe working environment.

LOOK at the workplace and see if there are any possible hazards that have not been identified and report these immediately to a supervisor.

ASSESS and ask if you have the correct knowledge, skills, training and tools to perform the task safely for yourself and the people you work with.

MANAGE yourself in any working situation, apply the correct controls and wear the correct PPE. If anything feels unsafe, remember to stop working immediately and tell a supervisor the necessary actions to make the situation safe for the whole team.

As a testament to their dedication to a culture of safety, the Tüprag team proudly earned the 2023 Euromines Silver Safety Award, which recognizes innovation and best practices for mitigating safety risks.

Lamaque, Québec

STRENGTHENING OUR SAFETY CULTURE

We continuously look to strengthen our safety culture by taking a holistic view toward safety leadership. A culture of safety means that each individual values their safety and the safety of those around them; having this culture allows for our policies, procedures and systems to be implemented effectively and leads to safety-conscious behaviour.

We continue to foster engagements between site management teams and front-line workers targeted toward priority safety topics, such as proper use of tools and equipment. Our [Health and Safety Policy](#) reflects our commitments to foster a strong safety culture, through promoting greater awareness and ownership of safety objectives and performance across all levels of the organization. In demonstration of this sense of shared responsibility, phase one of our Global Inclusion Survey previously conducted across operations in Canada and Türkiye indicated that 91% of our employees feel comfortable voicing concerns or making suggestions about workplace health and safety. In 2023, we conducted a Health and Safety Perception Survey, from which we learned that our employees want to see more visible leadership commitment to health and safety and demonstrated consideration of feedback on health and safety from all workers. We will be taking steps to apply these lessons in 2024 and beyond.

TECHNOLOGY AND INNOVATION TO IMPROVE HEALTH AND SAFETY

As part of our continuous improvement efforts, we study the use of new technologies that can help our workers accomplish tasks more safely and reduce the risk of harm to people and the environment. In our underground mines at Efemçukuru, Olympias and Lamaque, innovations in underground communications technology have allowed us to implement tagging and tracking technology for our equipment and our workers. Employees are provided with transmitters to ensure everyone can be accounted for, even when working in areas of restricted visibility. This technology reduces the risk of collisions and helps our workers avoid mobile machinery.

SUSTAINABILITY CASE STUDY

SAFETY TECHNOLOGY

Under the Safety and Sustainability pillar of our corporate strategy, we seek to use the best available innovative technology throughout operations to keep our people safe and mine responsibly.

One example is the electronic safety beacon system we have in place at our operational underground mines. Workers carry the wireless beacons on their person and readers installed throughout the mine enable control room technicians to quickly identify workers’ locations and make sure everyone is accounted for. The beacons also enable our miners to trigger alerts if they are faced with a hazardous situation. Over the coming years, we will be working to integrate these beacons with other technologies, including ventilation on demand, remote blasting and tele-remote mucking, helping to create safer, healthier and more efficient operations.

In 2023, after years of in-house development, our Hellas Gold Health and Safety Team in Greece launched the Canary Database, which proactively monitors physiochemical factors throughout its mine sites. The powerful database centralizes multiple on-site risk-factor monitoring systems that enable earlier risk identification and faster decision-making on preventative actions. Features include continuous

monitoring of underground air quality parameters and automated statistical analyses that aid our health and safety teams to efficiently identify and proactively manage potential risks, while maintaining a safe work environment.

The Hellas Gold team received double recognition at the Health & Safety Awards 2023 in Greece for its Canary Database project, as well as its Underground Mine Safety System, which utilizes the country’s first underground private mobile network to relay real-time information and can be leveraged during emergencies to save lives.

I am proud that Hellas Gold believed in me and gave me the opportunity to develop the Canary Project. I am honoured to be part of an organization that prioritizes innovation and safety, and I look forward to continuing this beautiful journey by further developing this innovative application.

Michael Michaloudis, Coordinator of Measurements and Occupational Risk Factor Measurement Instruments, Health & Safety Department, Hellas Gold

Health & Safety Awards 2023, Greece

TECHNOLOGY TO IMPROVE TAILINGS SAFETY

Eldorado’s tailings management facilities at Efemçukuru in Türkiye and Kokkinolakkas (used by Olympias) in Greece make use of dry-stack tailings. This technology removes excess water from tailings materials, and allows for a more stable, dried material to be stored. Dry-stack tailings are also permitted and planned for use at the Skouries development project. Safely managing tailings by using leading technologies as well as strong management and governance practices is a key component of managing and mitigating risks related to mine waste. More information about dry-stack tailings can be found in the [Tailings and Waste](#) section of this report.

HEALTH AND SAFETY TRAINING

New recruits and interns at our facilities undergo training on safety, incident prevention, environmental stewardship and Company procedures, among other topics. We regularly conduct safety training to address new and ongoing risks across our sites. While each site is responsible for conducting safety training, Eldorado’s *Golden Rules Health & Safety Handbook* provides a standardized approach to managing health and safety aspects across the Company. Ongoing training priorities are defined based on job requirements, performance evaluation notes and legal requirements. Even at sites with a long mining history and a well-established mining workforce, such as Kışladağ and Efemçukuru, we see the benefits of refresher training to improve employee capacity, productivity and health and safety performance as a necessary part of our approach.

TABLE 3: TOTAL HOURS OF EMPLOYEE AND CONTRACTOR SAFETY TRAINING BY REGION

	Canada	Greece	Romania	Türkiye	2023 Total	2022 Total	2021 Total
Employee training hours	779	8,257	1,568	41,775	52,378	47,981	35,062
Contractor training hours	Not tracked	6,601	42	24,319	30,962	22,187	14,242

In 2023, our safety training hours continued to increase, particularly relative to the last three years when our ability to train in person was limited due to gathering restrictions related to the COVID-19 pandemic. We were able to deliver more in-person training, resulting in an overall 19% increase in total safety training for both employees and contractors since 2022. In Greece, the implementation of our new training centre at the Kassandra Mines will further support safety training for our workforce.

Efemçukuru, Türkiye

CONTRACTOR SAFETY

Eldorado holds employees and contractors working on our sites to the same standards for safety and health. We communicate our expectations regarding contractor health and safety rules as a component of the tender notice and project assignments at our mining facilities. These expectations form an integral part of the agreements Eldorado signs with each contractor; they educate contractors to carry out work safely and in line with Eldorado’s standards, aim to prevent incidents among their staff, our staff or third parties; and aim to avoid damage or harm to facilities and equipment belonging to the contractor, Eldorado or third parties. If contractors do not follow safe practices, we require them to cease work until remedial actions have been taken. This may include implementing written procedures for high-risk tasks within the contractor’s scope; documenting training for all personnel; conducting fit-for-purpose audits of machinery, tools, materials, PPE and emergency equipment used by the contractor; and re-inducting their employees to Eldorado’s site safety requirements and the *Golden Rules Health & Safety Handbook*. In 2023, we adopted a Supplier Code of Conduct that sets out Eldorado’s expectations of suppliers doing work on our behalf, including compliance with our minimum standards for health and safety and fostering a culture of safety toward eliminating fatalities, serious injuries and occupational diseases.

HEALTH AND SAFETY BEYOND THE MINE

We also consider local stakeholders’ health and safety in our activities. As we transport materials to and from mine sites, the safety of our workers relates directly to the safety of local communities and neighbours. We require our workers and contractors to adhere to all local transportation laws and regulations. An important part of being a responsible operator and a good neighbour is respecting common areas outside of our mining sites (such as roadways), and Eldorado is committed to transportation safety.

To promote health and safety in the communities near our operations, our sites have both informal and formal aid-assistance programs in which Eldorado’s emergency response teams help in community emergencies. Health programs at our sites provide basic medical treatments and services for employees and contractors, including immunizations and medical check-ups. At some sites, like Efemçukuru, local community members are welcome to visit our physicians to receive check-ups free of charge, while we support access to health care off site across our operating regions.

EMERGENCY PREPAREDNESS

By planning for emergencies, we identify, prioritize and implement controls for potential hazards at our sites. Emergency plans help to safeguard our people, the environment and local communities. Emergency response programs are in place across our operations. Our emergency response teams comprise employees with additional training in emergency protocols, procedures and equipment. The emergency response programs include extensive emergency drills and training, such as mine rescue drills, fire drills, CPR first-aid training, and training in the use of hazardous materials suits and other safety equipment. Our operating regions also have crisis management plans in place and are working to ensure consistency with Mining Association of Canada’s TSM [Crisis Management and Communications Planning Protocol](#).

Our emergency response teams also maintain close working relationships with community-based emergency responders, and provide additional support and resources to local responders in the event of a serious off-site incident. In cases of natural disaster and irregular weather events, such as floods and forest fires, which may become more frequent due to climate change, our emergency responders are prepared to assist community-based response teams to protect our workers, assets and neighbours. On February 6, 2023, a series of earthquakes devastated vast regions in Türkiye and Syria, the effects of which are still felt by thousands of people. The Efemçukuru Mine Search and Rescue Team and the Kışladağ Gold Mine Fire Rescue Team were dispatched immediately to support search and rescue efforts and provide relief in the hardest hit areas. These teams worked together tirelessly to apply their training and equipment to help save lives.

Olympias, Greece

SUSTAINABILITY CASE STUDY

EMERGENCY PREPAREDNESS AT THE KASSANDRA MINES

Safety is non-negotiable in our day-to-day operations, and that includes being ready to manage emergency situations.

In 2023, our Health and Safety team at the Kassandra Mines worked hard to implement its Emergency Response Plan. This included delivering monthly trainings to its Rescue Team of 53 employee volunteers, facilitated by accredited external experts, to ensure an intimate knowledge with the mines and procedures. One example of a training was a simulated rescue from height at Olympias – the complex scenario involved three rescuers employing the correct procedures and equipment to extract a worker trapped at height, while extinguishing a small-scale fire in the area.

Hellas Gold operates a new Mine Rescue Station that is purpose-built to both train and equip the Rescue Team. The multifunctional space was designed to efficiently guide rescuers’ preparations in the case of an emergency, with stations including oxygen and atmospheric air cylinder maintenance and refilling, equipment decontamination, changing rooms and an equipment and spares warehouse. The team also spent two years designing a custom emergency response vehicle according to the specific needs of Kassandra Mines sites and is equipped to handle any emergency. It is able to carry five personnel and support first aid treatment, underground firefighting, chemical hazard/incident response, traffic incident response, rope rescue and confined space rescue. Preparedness and timing are critical for saving lives in emergency situations and with the addition of this vehicle, emergency response time is expected to decrease by at least 45 minutes.

Inclusive Diversity

We believe diverse and inclusive teams are a competitive advantage for Eldorado. We recognize and seek to foster diversity of identity and cognitive diversity across our organization. This includes gender, race, ethnicity, language, sexual preference, geography, religion, disability, age, and any other demographic characteristics that, in combination, define our sense of individual identity.

Cognitive diversity is also essential in mining, which often requires specialized skills and expertise; this form of diversity includes our background, acquired skills, knowledge, experiences and other attributes that influence our thinking, decision-making and performance. Actively including diverse people, perspectives and ideas is critical to our business and our ability to create shared value.

DIVERSITY IN LEADERSHIP

Eldorado’s Diversity Policy was updated in late 2023, including aspirational targets to:

- Maintain a minimum of 30% women directors on our Board;
- Maintain a minimum of 30% women on our senior management team;
- Maintain at least an additional 10% of directors on our Board be represented by one or more designated groups (beyond women) as defined in the policy; and
- Maintain at least an additional 10% of our senior management team be represented by one or more designated groups (beyond women) as defined in the policy.

Eldorado defines designated groups as women, Indigenous peoples (First Nations, Inuit and Métis), visible minorities, persons with disabilities, and LGBTQIA2S+. As of April 2023, we have exceeded our aspirational targets at the Board level.

TABLE 4: BOARD AND COMMITTEE DIVERSITY

Board/Committee	Age Range	Female (%)	Male (%)
Board of Directors	30 to 50 years	11	–
	Over 50 years	45	44
Audit Committee	Over 50 years	50	50
Compensation Committee	Over 50 years	75	25
Corporate Governance and Nominating Committee	30 to 50 years	34	–
	Over 50 years	33	33
Sustainability Committee	30 to 50 years	25	–
	Over 50 years	75	–
Technical Committee	Over 50 years	33	67

TABLE 5: SENIOR MANAGEMENT AND OFFICERS DIVERSITY¹

Officers and Senior Management	Age Range	Female (%)	Male (%)
Senior Management	30 to 50 years	57	43
	Over 50 years	50	50
Officers	30 to 50 years	100	–
	Over 50 years	–	100

¹ Figures in this table are as at December 31, 2023 and may therefore differ from those disclosed in Eldorado’s other reports published in 2024, which use different reporting timeframes.

Kışladağ, Türkiye

SUPPORTING OPPORTUNITIES FOR WOMEN AND OTHER DESIGNATED GROUPS

We are actively providing opportunities for women and other designated groups by providing flexible working arrangements, support for working parents, and through our focus on greater gender parity in recruitment. In 2023, Eldorado continued to support inclusive diversity across our operating regions:

Global

- We continue to implement Inclusive Diversity Roadmaps specific to each of our sites and corporate offices to foster a culture of inclusion, improve diverse representation in the workforce, and reduce bias in everyday processes through various means, including communication and feedback mechanisms, providing training and development opportunities, and implementing talent management systems.
- To further representation of women in the procurement function, we are a proud sponsor of [Artemis Project](#), an organization that brings together women-led businesses related to mining to accelerate collaboration, innovation and entrepreneurship for better business outcomes.
- Eldorado is proud to be an [International Women in Mining \(IWIM\)](#) Advocate, as part of our commitment to foster career and leadership opportunities for women in our workforce.
- Our valuable leadership model has, as its core, inclusive leadership. Training and development is available on-demand promoting inclusion, strategies for reducing unconscious bias in decisions, and promoting a growth mindset and psychological safety.
- We continue to conduct gender pay equity reviews using best-in-class third-party analytics software to identify any unintended and systemic bias in our compensation processes.
- As part of our Global Employee Listening Strategy, we conducted an Employee Engagement Survey. Women scored 84% favourable on feeling respected, trending upward 8% since late 2021 as a result of our internal efforts.
- We also conducted our first Global Health & Safety Perceptions survey to measure employee sentiment on physical and psychological workplace safety climate. These results are helping inform the design of further psychological safety leadership and employee development offerings in 2024.

Olympias, Greece

SUSTAINABILITY CASE STUDY

SUPPORTING DIVERSITY IN OUR QUÉBEC OPERATIONS

Eldorado once again was a proud partner of the Artemis Project in 2023, a network that aims to break barriers for historically underrepresented women and women-owned businesses. Thanks to this alliance, we partnered with a sister project Artemisa Mining Challenge, which aims to bring employment opportunities to women engineers. International recruitment is one solution to the labour shortage we have been experiencing in recent years, and for Eldorado Gold Québec, it is an opportunity to foster a diverse and inclusive workplace.

In 2023, our Lamaque team sponsored two female engineers from Chile. They speak both Spanish and English and participated in French language classes for nearly a year to ensure they had a foundation prior to arriving at site. Our team in Québec participated in cultural awareness training and welcoming foreign worker training guidance to help ensure a warm environment.

| Lamaque, Québec

Canada

- Promoting work-life balance and wellness with a new program allowance and the right to disconnect policy.
- Implementation of new worker handbooks, including updated respectful workplace and grievance mechanisms.
- Our partnership with CREA Kitci-Amik supports cultural awareness of Indigenous peoples and communities.
- We are updating our policies using more inclusive language.
- Promoting diversity of hiring: With our international recruitment two female engineers from Chile were hired and joined the team in Lamaque. We also started a blind recruitment process.
- We provide both childcare support and flexible working arrangements at Lamaque for employees with children so that families can better support each other professionally and at home.
- We also continue to offer five different work schedules at Lamaque, providing flexibility to workers of different personal situations and allowing employees to be home with their families every night.

Türkiye

- Implemented the “Productive Women, Strong Futures” project to empower women socially and economically in a partnership with Women-Friendly Brands.
- Reducing bias in the recruitment process by removing personal information from resumes; like gender and personal photos.
- Respectful Workplace policy training and awareness sessions for employees.

Greece

- We began developing a survey for women in local communities to hear their beliefs, concerns and ideas in key areas, such as economic development, education and entrepreneurship.
- Our Minds in Mining program aims to create opportunities for Greek-speaking students to jump-start their careers.

SUSTAINABILITY CASE STUDY

WOMEN IN THE MUNICIPALITY OF ARISTOTELIS

A research project launched in 2023 by the organization Women on Top and supported by our Greek subsidiary, Hellas Gold, conducted a large field survey of women from small towns and rural areas of Greece, including the Municipality of Aristotelis surrounding the Kassandra Mines. The study aimed to investigate the particular needs, challenges, obstacles and opportunities women have to manage during their educational and professional careers.

Six two-hour interactive and experiential investigative workshops were carefully planned and implemented. A total of 50 women of all ages from local villages participated.

The findings will be used to propose and design social programs that will strengthen the participation of women from every corner of Greece in work and lifelong learning.

INCLUSIVE DIVERSITY IN OUR WORKFORCE

Everywhere we operate, we seek to provide opportunities for people of diverse ages, genders and cultural backgrounds. We recognize our industry can do more to attract and retain women, in particular. We are committed to fostering opportunities for young women to enter the mining industry and continue to work to develop opportunities for women across our organization.

In 2023, we saw our female hire rate increase to 23% across our global operations, accompanied by a decrease in turnover of female employees of nearly 3%, resulting in a trend of steady growth of female representation in our workforce to 13%. We continue to actively work on strengthening a number of talent recruitment and retention programs across the regions in which we work, including identifying and addressing opportunities to reduce bias in the hiring process; proactively enhancing how we look for diverse talent through posting platforms, hiring agencies and partners, such as International Women in Mining and other programs targeting women in STEM; and laying the ground work to provide future opportunities for international recruitment of women. This is a direct reflection of Eldorado’s commitment to supporting gender diversity and fostering employment opportunities for women in mining.

TABLE 6: EMPLOYEES BY GENDER AND REGION

Region	Female		Male	
	Number	%	Number	%

1 Eldorado adopted new age ranges of under 30, 30–50, and over 50 in its reporting of people metrics in 2023 to better align with widely accepted reporting standards. Previous years used age ranges 30 and under, 31–45, 46–60, and 61 and over. Apparent discrepancies in calculated totals are due to rounding of figures.

2 Rates are functions of their respective sub-category totals (i.e., Female (%) rates are based on total number of female employees, Male (%) rates are based on total number of male employees, and Total (%) rates are based on total number of both female and male employees).

Training and Professional Development

We believe in developing workforce capacity and conducting regular training and performance reviews across our sites. The majority of our workforce comes from local communities and the regions surrounding our mines, and they often have no prior mining experience. Building capacity and skills in our workforce provides significant socio-economic benefits to the regions where we operate, and we invest in relevant training and development initiatives to improve the capabilities and safety of our employees.

In 2023, we began laying the groundwork for expanding our capacity and delivering new approaches to training at the Kassandra Mines. At Olympias, we have commissioned two underground mining simulators to enhance training for operators of drilling, bolting, loading and hauling equipment, and began training on a remotely operated underground loader. We are also working to implement specialized training in underground mining techniques, particularly drilling and the efficient use of specialty drilling equipment. At Skouries, we purpose-built a training centre that will facilitate the implementation of a tailored program delivered by experienced leadership, which will include developing skills specific to mining techniques for the large volume stopes unique to the ore body. This program will complement applicable standards in the Greek Mining Code and Labor Legislation and will combine comprehensive in-classroom training on theory with hands-on training, after which workers will be assessed on both theory and practical knowledge before they are qualified to work in the mine.

We have been working to implement lessons learned from the results of our phase one Inclusion Survey in Canada and Türkiye in previous years, which indicated that 94% of our employees believe that the work we do is important and that 91% feel that they are contributing to Eldorado's success. We also learned that there is an opportunity to increase transparency regarding professional development opportunities. Through the survey, we were able to better understand employee experiences affecting their sense of inclusion, dissecting it for different dimensions of diversity such as gender, age, caregiver status, disability and tenure. Our goal continues to be reduced variability in experience across different groups, lifting the overall employee experience.

These findings informed local Inclusive Diversity Roadmaps that we have advanced during 2023 since their launch the previous year. The Roadmaps included measures such as providing access to a variety of digital learning solutions for employees; launching an internal mobility program and creating visibility on global career opportunities; and leadership development, awareness (e.g., cultural, unconscious bias, diversity, equity), and other specialized trainings (e.g., language, job-specific skills). Eldorado has also implemented internship and apprenticeship programs at our offices and sites globally to prepare the next generation of miners. Looking forward, we are working to implement various talent management systems, including broadening access to 360° feedback and providing employees with increased opportunities for coaching, mentorship and to have regular one-on-one career conversations with their supervisors.

TABLE 13: EMPLOYEE TRAINING HOURS BY GENDER, SENIORITY AND REGION¹

	Gender	Region			2023 Total Training Hours	2022 Total Training Hours	2021 Total Training Hours
		Canada	Greece	Türkiye

All Categories	Female	1,679	4,751	2,501	8,933	8,175	5,965
	Male	5,582	21,701	31,537	58,819	80,517	61,345
Total		7,261	26,452	34,038	67,752	88,692	67,310

¹ Prior to 2023, our reporting of employee training hours for Canada did not include data from our head office in Vancouver. Eldorado does not report these data for offices and projects in the Netherlands and Romania. Apparent discrepancies in totals in this table are due to rounding of final figures.

Labour Standards

Eldorado seeks to uphold international labour standards and human rights for its employees and contractors. As a member of the [United Nations Global Compact](#), our [Human Rights Policy](#) specifically prohibits child and forced labour in our operations and supply chain, and we work with our contractors to uphold international standards as well as applicable labour regulations where we operate.

Many of our employees are unionized, with employment terms and conditions negotiated through collective bargaining agreements. Eldorado's labour agreements are overseen by our Mine General Managers and Country Vice President & General Managers. Approximately 59% of our employees were covered by collective bargaining agreements in 2023. We believe we have good relations with both our unionized and non-unionized employees and are committed to resolving employee relations matters promptly and to mutually beneficial outcomes. In 2023, we experienced no material labour action at our operating sites.

TABLE 14: EMPLOYEES COVERED BY COLLECTIVE BARGAINING AGREEMENTS¹

Responsibly Produced Products

Eldorado is committed to responsibly producing gold and other metals that offer a wide range of uses. Our products advance sustainable development and contribute to economic growth around the world. We focus on producing gold and other metals responsibly, and all of our gold-producing sites receive independent assurance under the **World Gold Council's (WGC) Conflict-Free Gold Standard**.

In 2023, Eldorado continued implementing the Mining Association of Canada's TSM and received external verification of its results at Olympias, including Level AAA performance in Biodiversity Conservation Management and Tailings Management. We also received assurance of full conformance with the WGC's Year 3 RGMP requirements. Last year, Lamaque achieved minimum Level A across all MAC-TSM Protocols, with Level AAA performance in Biodiversity Conversation Management, Water Stewardship and Tailings Management. Our Turkish operations are also working to implement MAC-TSM voluntarily, with the next external verification scheduled for Kışladağ and Efemçukuru in 2024.

- **Responsible Gold Mining Principles**
- **Toward Sustainable Mining**

Kışladağ, Türkiye

Product Responsibility

Eldorado supports industry-wide efforts to responsibly produce gold and other precious and base metals. We acknowledge and believe that our license to operate requires that all of our activities be conducted in a manner that does not cause, contribute or directly link to human rights abuses or unlawful conduct.

As a member in good standing of the [World Gold Council](#), [Euromines](#) and the [Mining Association of Canada](#), we are committed to implementing robust social and environmental standards that benefit all stakeholders. Our operating mines adhere to:

- [World Gold Council's Responsible Gold Mining Principles](#)
- [World Gold Council's Conflict-Free Gold Standard](#)
- [Mining Association of Canada's Toward Sustainable Mining](#)
- [Voluntary Principles on Security and Human Rights](#)
- [United Nations Global Compact Ten Principles](#)

In addition, operating mines in Greece and Türkiye adhere to:

- [ISO 14001 Environmental Management Systems Standard](#)
- [ISO 45001 Occupational Health and Safety Management Systems Standard](#)

In Greece, we have also implemented:

- [ISO 39001 Road Traffic Safety Management Systems Standard](#)
- [ISO 50001 Energy Management Systems](#)

Kışladağ and Efemçukuru intend to implement ISO 50001. Our Kışladağ mine adheres to the [International Cyanide Management Code](#) and non-implementing sites are working to conduct gap assessments and corrective action plans against the Code, where applicable.

| Kışladağ, Türkiye

THE VALUE WE CREATE

How Our Products Contribute to Society

The metals we produce comprise many of the materials that make up the modern world. They are critical components of green technologies such as wind turbines, electric cars, solar cells and major infrastructure that are advancing the global transition to a lower-carbon economy. Our products create and store value for economies, societies and governments, and form an integral part of modern financial systems. Just as our products contribute to a better world, we are committed to producing them in a way that creates positive economic, social and environmental value for all our stakeholders.

Gold mining is a major economic driver for many countries and jurisdictions around the world. Well-managed, transparent and responsible gold mining can be a major contributor to the socio-economic well-being of host communities through the creation of local employment and business opportunities, as well as investments that seek to benefit community development.

SUSTAINABILITY CASE STUDY

GOLD CHANGES THE GAME FOR BREAST CANCER PATIENT CARE

In Canada, one in eight women will develop breast cancer in their lifetime, making it essential that we have the tools to quickly identify and treat the disease. Through the Breast Surgical Localization Program, the Providence Breast Centre at Mount St. Joseph Hospital in Vancouver is ensuring that women have access to lifesaving and life-altering care.

Eldorado recognizes the impact this program is having for women in need of cancer care, and that’s why, for the second year in a row, we were pleased to support Providence Breast Centre in improving the experience of women undergoing breast cancer surgery in British Columbia.

“We’re proud to once again support the lifesaving work of the Providence Breast Centre,” said George Burns, President & CEO, Eldorado Gold. “It’s exciting to see such an innovative use of gold in health care – and with such a profound impact on patients. The Providence Breast Centre can conduct more surgeries, with more precision in locating the tumour, and patients are more comfortable throughout the process.”

“Eldorado Gold’s donation was a catalyst for our program, helping to raise the start-up costs and get the program running,” said Dr. Rebecca Warburton, Medical Director of Providence Breast Centre. “Rarely do we see an entirely new program have such a quick turnaround time and with such impressive results.”

“We’re proud to once again support the lifesaving work of the Providence Breast Centre.

George Burns, President & CEO, Eldorado Gold

In the first five months following the program’s inception in April 2023, surgeons at the Providence Breast Centre performed 498 operations for proven or suspected breast cancer. The team is on track to conduct 1,500 surgeries this year – a staggering 25% increase in breast cancer surgeries since pre-pandemic times.

To learn more about how the team at Providence Breast Centre is successfully using this gold-enabled technology to save lives, click [here](#).

SAFE PRODUCT HANDLING

Our primary operating cash flows derive from the sale of unrefined gold bullion bars (or doré), and gold, silver, lead and zinc concentrates. All of Eldorado’s products are sold in bulk to downstream refineries and smelters for secondary treatment.

At Kışladağ, doré is sold and transported to metal refineries in-country to be further processed into pure (99.9%) metals. At Efemçukuru and Olympias metal concentrates are transported to offshore smelting facilities for further refinement. At our Lamaque Complex in Canada, doré is sold to refineries in Canada and the United States. Our concentrates, which contain combinations of gold, silver, lead and zinc, are loaded into enclosed trucks and transported to seaports for shipment to smelters.

Eldorado does not sell our products to the public. Our doré, which largely contains gold and silver, has no environmental or safety risks associated with handling or disposal. Our products do not require consumer packaging and we do not undertake product recycling or reclamation. As a result, we are not required to maintain detailed procedures regarding public labelling and handling. We have developed product transport and security procedures to keep our employees and partners safe throughout the processing of our products. The transport of concentrate is subject to risks, mainly with respect to theft and environmental liabilities in the event of a spill. We require road and marine shipments of concentrate from Efemçukuru and Olympias to be performed under the [European Agreement Concerning the International Carriage of Dangerous Goods by Road](#) and [International Maritime Organization \(IMO\)](#) regulations.

Eldorado requires contractors to follow standards and procedures that are relevant to the aforementioned guidelines for emergency response with respect to transportation and security. In accordance with our [Anti-Bribery and Corruption Policy](#), which we updated in 2022 and reviewed again in 2023, we seek to provide training on ethical business practices to employees regularly. In 2023, Eldorado held refresher training for all employees on our [Code of Ethics and Business Conduct](#).

| Kışladağ, Türkiye

CONTRACTOR AND SUPPLIER MANAGEMENT

Eldorado’s supply chain forms an important stage in the lifecycle of the gold and precious metals we responsibly produce. Our contractors are a critical part of our workforce, contributing to areas including exploration, construction and other developments requiring specific resources and expertise, and we work with our suppliers to procure vital supplies for our workforce and operations, such as food, tools, equipment, machinery or bulk materials.

Eldorado acknowledges the importance of not only managing risks and implementing internationally recognized best practices in its own operations, but extending these expectations to our contractors and down the supply chain. SIMS requires all contractors and suppliers to be evaluated and conduct their work according to minimum performance standards for health and safety, environmental, social, human rights and other facets of sustainability, including:

- Complying with the [MAC-TSM Prevention of Child and Forced Labour Verification Protocol](#);
- Having contractors’ and sub-contractors’ sustainability performance evaluated as part of the risk-based selection process;
- Undergoing site-level due diligence, monitoring, reporting and oversight; and
- Having adequate insurance, training, certifications and protocols.

Guided by our corporate commitments, applicable laws and evolving best practices, we are working to develop improved tools and controls to mitigate risks outside of our own operations and progress against the requirements in SIMS. In 2021, Eldorado identified an opportunity to broaden the reach of its formal policies and controls for stronger commitment to ethical and responsible supply chains. Through 2022, we worked to produce a Supplier Code of Conduct that was finalized and formally adopted in 2023 and seeks to align our suppliers with Eldorado’s commitments. We also began investigating and developing processes to conduct systematic risk-based due diligence and compliance monitoring of our supply chain as controls against the Supplier Code.

Human Rights

As a significant economic and social presence in the jurisdictions and communities where we operate, Eldorado has the potential to substantively impact the human rights of our stakeholders.

We acknowledge that we have a responsibility to respect internationally recognized human rights as expressed in the [International Bill of Human Rights](#) and the [International Labour Organization's Declaration on the Fundamental Principles and Rights at Work](#). In doing so, we commit our efforts to avoid causing or contributing to adverse human rights impacts and to prevent or mitigate those impacts that are directly linked to our operations. To meet our responsibilities in line with the [UN Guiding Principles on Business and Human Rights](#), we have put in place:

- A policy commitment to respect human rights, as expressed in our [Human Rights Policy](#), which was updated and then approved by the Board in 2022. The policy has been informed by the United Nations Declaration on the Rights of Indigenous Peoples;
- A due diligence process to identify, prevent, mitigate and account for how we address our human rights impacts, as outlined in our SIMS, which commits us to regular, third-party human rights impact assessments;
- External assurances in accordance with the [WGC's Conflict-Free Gold Standard](#) for Eldorado's gold-producing sites; and
- Processes to enable the remediation of adverse human rights impacts that we may cause or contribute to, as outlined in the grievance mechanism section of this report.

Employees and contractors are expected to adhere to our [Human Rights Policy](#) and associated requirements in SIMS. We expect our business partners, including security providers, contractors and suppliers, to share this commitment to the rights of our workforce, local community members, Indigenous peoples and all stakeholders with whom we interact. This includes respecting the human rights of individuals who require particular attention, including women, children, Indigenous peoples (pertinent to Lamaque, as directly impacted Indigenous peoples have not been

identified at or near our other operations) and other potentially vulnerable or marginalized groups. Our stakeholders are identified through regular stakeholder mapping, and any potential human rights impacts may be identified through local impact assessments, our accessible grievance mechanisms, regular third-party human rights impact assessments and stakeholder engagements. Salient human rights issues are managed principally by site, regional and corporate community relations and legal teams, with oversight from senior management and the Board.

We communicate our commitment and these expectations through various means, including but not limited to induction and refresher training, on our intranet site, meetings with our Community of Interest Committees, and during the procurement process through our Supplier Code of Conduct. These commitments apply equally across all of our operating jurisdictions and our [Human Rights Policy](#) is made accessible in all official languages where we operate.

UNITED NATIONS GLOBAL COMPACT

Eldorado is a signatory to the [UN Global Compact \(UNGC\)](#), the world's largest corporate responsibility initiative. The [UNGC's Ten Principles](#) provide fundamental guidance for our business in the areas of human rights, labour standards, the environment and anti-corruption. We have considered the UNGC's Principles in the development of our [Code of Ethics and Business Conduct](#), [Anti-Bribery and Corruption Policy](#), [Human Rights Policy](#), [Diversity Policy](#), [Respectful Workplace Policy](#), [Social Performance Policy](#) and [Environmental Policy](#). We report against each of the Ten Principles in our [Communication on Progress](#).

RESPONSIBLE SOURCING

World Gold Council's (WGC) Conflict-Free Gold Standard (CFGS)

The WGC published the CFGS in 2012, following extensive consultation with governments, civil society, external auditors and supply chain participants. The standard creates a framework for assurance that the production of gold by a company does not contribute to unlawful armed conflict or human rights abuses. The CFGS also serves to operationalize the Organisation for Economic Co-operation and Development's (OECD) [Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas](#). Eldorado's operations are not located in conflict-affected areas, but we nonetheless adopted the CFGS in 2013 to provide assurance that the gold we produce does not cause, support or benefit armed conflict or contribute to human rights abuses or breaches of international humanitarian law. This is reinforced by our updated Human Rights Policy and in SIMS. We published our tenth annual [Conflict-Free Gold Report](#) in 2023 that confirms Eldorado's gold-producing operations do not contribute to conflict.

A copy of our report and independent assurance statement can be found on the [Sustainability Reporting page](#) of our website.

SECURITY

Voluntary Principles on Security and Human Rights

Created in 2000, the [Voluntary Principles on Security and Human Rights \(VPSHR\)](#) comprise a “set of principles designed to guide companies in maintaining the safety and security of their operations within an operating framework that encourages respect for human rights.” The VPSHR is considered the standard for best practice in managing security for extractive industry operations. The Government of Canada has identified the VPSHR as an important international standard in [Canada’s Responsible Business Conduct Abroad Strategy](#), and implementation of the VPSHR is a membership requirement of the World Gold Council and MAC. Our commitment and progress on the VPSHR is discussed in our VPSHR Report and included in MAC’s annual [Towards Sustainable Mining Performance Report](#).

Eldorado has committed to implementing the VPSHR in its Human Rights Policy, which all employees and contractors, including private security providers, are required to abide by. SIMS also supports Eldorado’s alignment with the VPSHR.

Eldorado retained a credible third party to conduct Voluntary Principles on Security and Human Rights assessments at operations in Canada and Türkiye in 2021 and in Greece by 2022, and to evaluate our policies, practices and controls for security-related human rights risks. The assessments confirmed that our overall risk exposure is low in Canada, Greece and Türkiye. Eldorado will seek to conduct new assessments globally in 2025. Lamaque and Olympias underwent SIMS Compliance Verifications in 2022 and 2023, respectively, during which performance against the SIMS Security Standards was assessed and our full conformance with Year 3 requirements of the RGMPs, which include implementation of the VPSHR, was verified by an independent third-party auditor.

Eldorado continues to pursue further opportunities that advance our commitments aligned with the VPSHR, including engagement with private and public security providers on human rights topics.

SUSTAINABILITY SPOTLIGHT

IMPLEMENTING THE VOLUNTARY PRINCIPLES ON SECURITY AND HUMAN RIGHTS THROUGH SIMS

We are responsible for the security of our people, property and products and work closely with public and private security providers to operate in a manner that promotes and protects human rights. As a member of MAC and the WGC, Eldorado is committed to providing a safe and secure working environment for our employees, contractors and visitors and managing security-related human rights risks through implementation of the Voluntary Principles on Security and Human Rights.

Eldorado’s SIMS was developed in alignment with the VPSHR and security and human rights-related requirements of MAC-TSM and the WGC’s RGMPs, and it is the principal mechanism by which actions toward conformance with these corporate commitments regarding security and human rights are managed and administered. The SIMS Security Performance Standards include conducting risk assessments consistent with the VPSHR and implementing

systems and programs appropriate to the risks identified. Compliance with SIMS is verified at the operations level through internal compliance verifications and self-assessments, as well as external assessments by a credible third party.

Formal complaints and grievances pertaining to security and human rights may be reported through our third-party whistleblower reporting agency as well as our employee or external grievance mechanisms.

Despite Eldorado’s relatively lower-risk exposure to human rights risks, based on operating jurisdictions and management controls in place, we intend to continually improve our application of the VPSHR through the implementation of SIMS. Key findings from assessments and verifications inform action plans for each operation, outlining specific recommendations and responsibilities to address the risks identified, along with appropriate controls.

Responsible Gold Mining Principles

The World Gold Council's Responsible Gold Mining Principles set out clear expectations for consumers, investors and the downstream gold supply chain as to what constitutes responsible gold mining. Developed in collaboration with the WGC's member companies and key industry stakeholders, the ten Principles and 51 sub-principles address material environmental, social and governance topics for the gold mining sector.

As a member of the WGC, Eldorado is committed to implementing the RGMPs in full. In 2023, we received independent assurance of full conformance with the RGMP Year 3 requirements across our four operating gold mines: the Kışladağ and Efemçukuru mines in Türkiye, the Olympias mine in Greece and the Lamaque Complex in Canada. Eldorado will seek to maintain full conformance with the RGMPs and the latest independent assurance statements are available under the Responsible Gold Mining Principles Report section of our website [here](#).

Eldorado's EVP, Technical Services & Operations is responsible for overseeing the Company's commitments to the RGMPs, and ultimately, accountability for full conformance rests with the President & CEO. The EVP, Technical Services & Operations is supported by the Vice President, Health, Safety & Sustainability in managing the process toward full conformance with the RGMPs at both the corporate and site levels, and is responsible for providing quarterly updates on progress to the Sustainability Committee of Eldorado's Board of Directors. At the operations level, the Mine General Manager of each operation is responsible for the effective day-to-day implementation of actions that align operations with the RGMPs. The EVP, Development, Greece, VP & Country Manager, Canada, and VP & Country Manager, Türkiye have overall oversight in-country.

Eldorado's SIMS is the principal mechanism by which actions toward full conformance with the RGMPs are managed and administered. Developed in 2020 and implemented at all operating sites in 2021, SIMS is a set of company-wide minimum performance standards for the areas of health and safety, environmental performance, social performance, security and

general management of sustainability topics. SIMS has been developed in alignment with the RGMPs, along with other internationally recognized voluntary standards such as Towards Sustainable Mining, the International Cyanide Management Code and the Voluntary Principles on Security and Human Rights. Compliance with SIMS is verified at the operations level through internal self-assessments and Compliance Verifications, as well as external assurance including that required by the RGMPs.

We conducted SIMS Compliance Verifications at the Lamaque Complex in 2022 and the Kassandra Mines (excluding Skouries) in 2023, which involved a team of external auditors that independently verified self-assessed conformance with the RGMP requirements. Site visits for Kışladağ and Efemçukuru will be undertaken in 2024 and we plan to assure each site on a 3-5 year cycle, as required by the RGMPs. Where the independently assured SIMS self-assessment and Compliance Verification process identifies continuous improvement opportunities, Eldorado will evaluate and implement them accordingly. Longer-term actions related to the Principles, such as Eldorado's 2030 climate-related target, continue to progress.

Efemçukuru, Türkiye

SUMMARY OF RGMP CONFORMANCE

Responsible Gold Mining Principles	Lamaque Complex	Olympias	Kışladağ	Efemçukuru
1. ETHICAL CONDUCT: We will conduct our business with integrity including absolute opposition to corruption.	●	●	●	●
2. UNDERSTANDING OUR IMPACTS: We will engage with our stakeholders and implement management systems so as to ensure that we understand and manage our impacts, realize opportunities and provide redress where needed.	●	●	●	●
3. SUPPLY CHAIN: We will require that our suppliers conduct their businesses ethically and responsibly as a condition of doing business with us.	●	●	●	●
4. SAFETY AND HEALTH: We will protect and promote the safety and occupational health of our workforce (employees and contractors) above all other priorities, and will empower them to speak up if they encounter unsafe working conditions.	●	●	●	●
5. HUMAN RIGHTS AND CONFLICT: We will respect the human rights of our workforce, affected communities and all those people with whom we interact.	●	●	●	●
6. LABOUR RIGHTS: We will ensure that our operations are places where employees and contractors are treated with respect and are free from discrimination or abusive labour practices.	●	●	●	●
7. WORKING WITH COMMUNITIES: We aim to contribute to the socio-economic advancement of communities associated with our operations and to treat them with dignity and respect.	●	●	●	●
8. ENVIRONMENTAL STEWARDSHIP: We will ensure that environmental responsibility is at the core of how we work.	●	●	●	●
9. BIODIVERSITY, LAND USE AND MINE CLOSURE: We will work to ensure that fragile ecosystems, critical habitats and endangered species are protected from damage and we will plan for responsible mine closure.	●	●	●	●
10. WATER, ENERGY AND CLIMATE CHANGE: We will improve the efficiency of our use of water and energy, recognizing that the impacts of climate change and water constraints may increasingly become a threat to the locations where we work and a risk to our licence to operate.	●	●	●	●

● In conformance

Engaged and Prosperous Communities

From the initial stages of exploration to the eventual reclamation and rehabilitation of a mine site, Eldorado relies on the relationships with our stakeholders and Indigenous peoples to work toward socially inclusive and sustainable development. The communities near our sites experience the most direct social, environmental and economic impacts of our business. By maintaining open and transparent communication, providing competitive wages and benefits, prioritizing local hiring and procurement, contributing our fair share of taxes and royalties, and investing in community programs and infrastructure, we work hard to support the development goals of our host communities and governments.

Engagement

Our relationships with stakeholders are built on trust, honesty and transparency. We engage with stakeholders to communicate our challenges and successes and to address their concerns through constructive dialogue to produce better outcomes.

Our teams make concerted efforts to meet with local communities and other stakeholders in ways that reflect local cultures. For example, at Kışladağ and Efemçukuru, our community relations teams frequently visit local coffee and tea houses that act as hubs of public life for community members. The conversations we have with our neighbours in these informal settings allow us to engage with our stakeholders in a way that respects their traditions and strengthens our relationships.

All of our operating sites also have formal Community of Interest Committees that play an important role for strengthening Eldorado's relationships with host communities. These committees are composed of representative and local stakeholders (residents, community leaders, youth, educators, local business representatives, trade unions, government regulators, environmental organizations and other subject matter experts) and Indigenous representatives.

They meet regularly and visit our sites to observe our practices, learn about how we manage our impacts, and share their perspectives on potential improvement opportunities. Through these meetings, we intend to offer opportunities for all voices in the community to be heard, ensure that our conversations are effective and have confidence that we are working toward outcomes that are mutually positive.

Mine General Managers and Country Vice President & General Managers are responsible for community and government relations. Eldorado's Director, Communications and Senior Director, Sustainability, work with our in-country teams to develop and maintain licence to operate from local communities and government at all levels. Eldorado's President & CEO is ultimately responsible for the Company's relationships with communities and governments.

SUSTAINABILITY CASE STUDY

COMMUNITY VOICES

All of our operating sites regularly meet with Community of Interest Committees (CICs) that we believe play an important role in providing independent feedback on our activities. These committees are composed of representative and local stakeholders, including community leaders, youth, Indigenous representatives, government regulators, environmental organizations and technical experts. They have the opportunity to visit our sites to observe our practices, learn about how we manage our impacts, and share their perspectives on potential improvement opportunities. The CICs are also an effective tool for preventing and resolving disputes, and are not a platform for lobbying, consultancy for Eldorado, promoting personal interest or a substitute for Eldorado's responsibilities.

The Kassandra Mines in Greece formally established their CIC in 2023, welcoming 15 members consisting of local government representatives; community leaders; members of vulnerable populations (including youth and older adults); representatives of cultural, women's and business associations; technical experts; and others. The committee's meetings are facilitated by a neutral third-party expert agency to ensure objectivity, fairness and effectiveness of the engagements.

During the year, the committee met several times to learn about Eldorado's policies and practices and mutually agree on committee terms, responsibilities, goals and objectives. Key topics that the CIC will consider for discussion include general updates to Hellas Gold's operations (including the construction of the Skouries development project), environmental management, community health and safety, traffic management, grievances and associated

mechanisms, local employment and procurement, and others raised by the committee. To facilitate regular CIC meetings, as well as open dialogue with all members of the community, the Hellas Team operates a Community Office in the local village of Palaiochori.

At Efemçukuru, the CIC discussed and provided feedback on multiple matters during the year, such as dissemination of accessible materials regarding the site's Biodiversity Action Plan and results from biodiversity assessments, rehabilitation works and closure plans, scoping of the site's Social Impact Assessment, and community development planning. In Québec, the "Monitoring Committee" (the name of Lamaque's CIC) was proud to launch its own [website](#), which provides information publicly about its members, recent activities, as well as minutes from its regular meetings.

HOW WE INTERACT WITH STAKEHOLDERS

Stakeholder	Why We Engage	Ways We Interact	Topics Discussed in 2023
 Communities	We rely on the relationships we build with host communities, which are based on transparency, participation and trust, to work toward mutually beneficial sustainable development and to maintain our license to operate.	• Community of Interest Committee meetings • Women-only meetings • Public consultations on key developments • Community surveys and questionnaires • Community office open door hours • Planned engagement events and activities • Indigenous community meetings • Neighbourhood meetings and townhalls • Community festivals and parties • Site tours for local residents, students and interested parties • Regional newsletters, local media and social media	• Community investment opportunities and strategic community development planning • Employment and contracting opportunities • Operational activities, including noise abatement, dust suppression and climate action • Management plans, including tailings, biodiversity and traffic management • Environmental and Social Action Plan and Community Investment Strategy at the Kassandra Mines • Disaster relief
 Employees	Our people are our top priority and ensuring their well-being, inclusion and development is the key to our shared success. Most of our employees are also local to the communities in which we operate.	• Corporate, regional and site personnel engagement • Employee newsletters, intranet, social media and email • Workplace health and safety committees • Annual performance and development reviews • Training sessions • On-site leadership safety meetings and toolbox talks • Anonymous Global Surveys (on a variety of topics, including Engagement, Integrity, Inclusion, Health & Safety) • Townhalls • Team building activities	• Health and safety • Safety, Code of Ethics and Business Conduct, Respectful Workplace and Cybersecurity training • 2023 Health and Safety Perception and Engagement Surveys • Community investment program employee perception survey at Hellas Gold • Annual performance reviews and professional development
 Government	Alignment with government policies, regulations and objectives helps us mitigate operational risks, mine responsibly and contribute to the socio-economic development of our operating jurisdictions.	• Ongoing communication and dialogue with officials at municipal, regional and national levels • Communication with supporting international and inter-governmental institutions (e.g., International Monetary Fund, European Bank for Reconstruction and Development, Export Development Canada, etc.) • Engagement with governments through industry associations	• Environmental permitting and monitoring • Climate change, water, land use and archaeology • Community investment and community development planning • Shared infrastructure • Disaster relief and crisis management • Public health

Stakeholder	Why We Engage	Ways We Interact	Topics Discussed in 2023
 Industry associations	Our activity in industry associations enable our participation in the development and adoption of leading practices for responsible mining.	• Membership in industry associations such as the International Cyanide Management Institute, Euromines, the World Gold Council, the Mining Association of Canada and the Canadian Mining Innovation Council • Participation in several working committees • Industry conferences and events	• Climate action • Tailings management • Standards implementation • Equity, Diversity and Inclusion (MAC-TSM EDI Protocol development) • Critical and strategic mineral development
 Non-Governmental Organizations (NGOs) and academic institutions	Collaboration with NGOs and academic institutions allows for effective knowledge sharing and innovation, and helps us gain feedback on potential improvement opportunities.	• Community of Interest Committee meetings • Meetings with NGOs at both the corporate and regional levels • Partnerships for community investment and development, as well as studies to identify and progress continuous improvement opportunities	• Community investment and community development planning • Agriculture • Impact management
 Investors	Our shareholders and lenders are critical for us to create shared value and we have a responsibility to provide timely, accurate and complete information.	• Annual shareholder meeting • Quarterly conference calls to discuss results • Frequent one-on-one or group meetings • For more information, see our Shareholder Engagement Policy	• Operational and financial results • Investment opportunities • Climate action • Environmental and Social Action Plans progress (Hellas Gold)
 Suppliers and contractors	Our suppliers and contractors provide necessary inputs for our operations, and we work closely to secure responsible supply chains. Most of our suppliers and contractors are also local to the regions in which we operate.	• Ongoing communication and dialogue between representatives • Performance reviews and risk assessments • Due diligence and compliance monitoring	• Dissemination of new Supplier Code of Conduct • Human rights and modern slavery • Climate change (energy procurement) • Contracting terms, contract renewals

ENGAGING WITH GOVERNMENTS

Government authorities are some of our most important stakeholders and essential partners throughout the mining lifecycle. Governments provide the laws and regulations that create the context for responsible mining. Stable regulations and transparent government processes allow Eldorado to mitigate risks and make investment decisions with certainty.

Appropriate regulation, accompanied by strong and stable judicial and political institutions, allows us to develop operations capable of generating value for all stakeholders. Well-performing government institutions are also important to the legitimacy, inclusivity and accountability of our operations among many of our other stakeholders, particularly local communities. For this reason, Eldorado encourages the development of effective, accountable and inclusive institutions at all levels of government in accordance with the UN SDGs.

To better understand government objectives and policies, provide information about our projects, discuss relevant issues and advance permitting, Eldorado maintains frequent dialogue with government authorities at the local, regional and national levels through our in-country teams. At the corporate level, we work with ministerial offices and diplomats, both in Canada and abroad.

In 2023, Eldorado made no donations to political parties.

ENGAGING WITH INDIGENOUS PEOPLES

Indigenous peoples are often impacted by mining. In Canada, the mining industry is the single largest employer of Indigenous peoples and contributes to the sustainable development of Indigenous communities across the country. The [Truth and Reconciliation Commission of Canada](#) highlighted that Canada's private sector has an important role to play in helping to reconcile historical injustices faced by Indigenous peoples. Eldorado has a responsibility to meaningfully consult Indigenous communities and provide equitable access to employment, training and educational opportunities.

Our updated [Human Rights Policy](#) has been informed by the [United Nations Declaration on the Rights of Indigenous Peoples](#), and commits Eldorado to “respecting the collective and customary rights, interests, culture and connection to the land of directly affected Indigenous peoples, if present in the area of influence. We will work to obtain their free, prior and informed consent before proceeding with development and throughout the life of the project.” We continue to strengthen our relationships with Indigenous communities near our Lamaque Complex and are committed to the relationships we have built.

Our team at Lamaque works with local Indigenous communities, contractors and educational institutions to provide training and employment opportunities to Indigenous peoples. In 2023, in collaboration with the CREA Kitci–Amik, an Indigenous educational centre for adults, we provided cultural awareness training to 30 employees at Lamaque. The VP & Country Manager, Canada, is responsible for Indigenous engagement in Québec. Directly impacted Indigenous peoples have not been identified at or near our other operations.

Complaints and Grievances

We believe that conducting business honestly and respectfully requires open communication between our sites and stakeholders. This is essential when managing disputes regarding our activities and relationships. When grievances are raised, we act and respond with due diligence. Effective grievance mechanisms play an important role in governing and remediating any impacts.

As part of our [Code of Ethics and Business Conduct](#), we have a Whistleblower Policy so that any stakeholder, internal or external, can confidentially report any concerns about our financial statements, accounting practices, internal controls, or any suspected or known illegal behaviour that violates laws, government regulations or our Code.

Concerns can be submitted anonymously and are managed by an external whistleblower reporting agency. Eldorado's [Audit Committee Chair, EVP, General Counsel and Chief Compliance Officer](#) and Corporate Secretary oversee all submissions and investigations. In addition, each of our operations has established mechanisms for receiving and responding to external grievances.

Our Community Response Standard in SIMS requires sites to receive, manage and respond to community grievances, comments and requests, in conformance with Level A of the [MAC-TSM Indigenous and Community Relationships Protocol](#), which:

- Captures reported incidents, concerns and feedback;
- Tracks issues and concerns raised by communities;
- Assesses and determines which grievances require remedy;
- Responds in a timely manner; and
- Is accessible.

In 2023, we registered a total of 19 local community grievances. Many of these grievances involved concerns raised related to activities outside of Eldorado's mining facilities and vehicle traffic, such as physical disturbances, noise, vibrations and dust. Nearly all grievances were resolved within timeframes supported by all parties. One grievance regarding congestion due to workers' parked vehicles was raised at the end of 2023 and, at the time of writing this report, was in the resolution phase, pending implementation of a long-term solution. Our community relations teams work closely with operations and project teams to address these issues and resolve grievances systematically, as they occur. Outcomes are tracked for each grievance and following resolution, we keep in touch with the stakeholders to ensure effectiveness of the agreed upon remedies.

FIGURE 1: LOCAL COMMUNITY GRIEVANCES BY CATEGORY

Efemçukuru, Türkiye

Community Investment

Our assets are located in diverse jurisdictions, each with their own unique cultural and social characteristics. Similarly, our projects differ throughout our operating regions in size and character, meaning that our specific impacts on society, the environment and the economy vary from project to project.

Our approach to community investment is responsive to local needs, while maintaining the core principles of inclusion and transparency. Engaging with local stakeholders to understand our impacts as well as their goals for the sustainable development of their communities is essential to how we identify and implement community investment projects. Each site is responsible for its own community investment initiatives, with the exception of the Kassandra Mines, which acts as a singular community investment unit on behalf of Olympias, Skouries and Stratoni.

Community investment projects are first assessed and then implemented by our community relations and public relations teams at each of our sites. Mine General Managers, along with country-level oversight from the EVP, Development, Greece, VP & Country Manager, Canada, and VP & Country Manager, Türkiye, are responsible for overseeing community investment projects and their contributions to sustainable development. Eldorado's VP, Health, Safety & Sustainability supports in-country teams in developing frameworks that optimize the efficacy and transparency of our community investments.

In 2023, we formally adopted a Community Investment Guidance as part of SIMS, which was developed through a collaborative process across sites, for the purpose of advancing sustainable development in host communities through strategic community investments. This involved aligning to Eldorado's values, policies and SIMS, as well as our commitments to MAC-TSM and the WGC's RGMPs and leading international frameworks on community development and investment. We will seek to formally implement the Guidance in 2024, addressing opportunities identified to support communities in building long-term resilience and self-reliance, and share best practices across global teams, given their unique local socio-economic contexts.

Eldorado's community investment falls broadly under the following categories:

COMMUNITY INVESTMENT CATEGORIES

Area of Focus	Related SDGs	Our Investments
Arts and Culture		Enabling culture and diversity of local communities through preservation of heritage and promotion of local traditions and practices
Economic Development	   	Supporting local business development, skills and capacity building in the local labour force, as well as entrepreneurship opportunities
Education and Youth	 	Fostering opportunities for childhood, youth and adult continuing studies, as well as research and education initiatives relevant to the mining sector
Environment	  	The protection and preservation of the natural environment around our mines that go well beyond regulatory requirements
Health and Well-being		Securing improved quality and access to local health care services that can operate independently and sustainably, and supporting recreational projects and sport clubs that promote healthy and active lifestyles
Infrastructure	   	Continuing the implementation and maintenance of physical infrastructure that supports community needs and a post-mine economy

Arnaia, Municipality of Aristotelis, Greece

CORPORATE GIVING

Through Eldorado’s Corporate Giving Committee, we continue to support opportunities for elementary, secondary and post-secondary education and training, local food banks, health care institutions, mental health organizations, and programs for vulnerable and at-risk youth. We seek strategic partnerships with organizations that have the knowledge and expertise to make positive, long-lasting impact in and surrounding the Metro Vancouver area.

In 2023, the Corporate Giving Committee allocated \$175,000 for strategically aligned initiatives and areas of greatest need.

\$4.29M

in community investments in 2023

56%

of our community investments in 2023 focused on building human and institutional capacity to support current and post-mining community needs through education, infrastructure and economic development

FIGURE 2: COMMUNITY INVESTMENTS AND DONATIONS BY CATEGORY¹

FIGURE 3: PAYMENTS TO COMMUNITIES AND COMMUNITY INVESTMENT (\$ MILLIONS)¹

Eldorado’s community investment and donation spending increased significantly in 2023 due to increased contributions in Greece and Türkiye. As part of our commitment to deliver \$80 million in community investment programming in Greece over the next 25 years, we significantly increased our spending from the previous year in support of communities, particularly those local to the Kassandra Mines. Our regional office in Ankara, Türkiye, delivered \$1.75 million in community investments during the year, which included disaster relief initiatives in the aftermath of the earthquakes that devastated the country’s southern regions, as well as increased support for our programs at Efemçukuru and Kışladağ.

¹ Figures depicted are estimates based on assumptions made in internal accounting methodology related to accrual timeframes and currency conversions across global operations. Percentages for community investments and donations broken down by category represent spend from mine sites only, and therefore exclude \$1.75 million in spending from our regional office in Ankara, Türkiye. Figures are rounded up to the nearest 1%.

2023 COMMUNITY INVESTMENT HIGHLIGHTS

We are proud to partner with our neighbouring communities to invest in their social, economic, cultural and environmental well-being. By doing so, we can contribute to the SDGs in the areas where our business has the greatest impacts.

Efemçukuru, İzmir Province, Türkiye

At Efemçukuru, we continued to prioritize community investments in addressing our commitment to support quality education, and the engagement and well-being of youth.

We continued to support the Efemçukuru Agricultural Development Cooperative and the Kavacık Women’s Initiative Production and Business Cooperative, a local women’s grape processing cooperative that aims to build capacity and foster entrepreneurship among local women. The team also contributed to donations and care for vulnerable groups in surrounding communities, including distribution of food, medical supplies and equipment, and provided supplies and equipment for earthquake relief in the southeastern region of Türkiye.

A major focus for 2023 was the ongoing implementation of the “Productive Women, Strong Futures” project, which aims to advance gender equality and economic empowerment of local women through education and entrepreneurship. The program focused on helping 25 local women receive training, mentorship and certification within the scope of beekeeping entrepreneurship. For more information, read Sustainability Case Study: Investing in Women is Investing for a Better Tomorrow in our 2022 Sustainability Report.

SUSTAINABILITY SPOTLIGHT

ADVANCING STRATEGIC COMMUNITY INVESTMENT

Eldorado formally adopted a Community Investment Guidance document in 2023. The purpose of the document is to serve as a reference guide across our sites for decision-making on community investments with strategic objectives. Strategic community investment means that the benefits of mining are shared as part of a fair, transparent and participatory process with a prioritization for long-term community development. In this way, our community investment activities both require and help build mutual trust with communities. The guidance was developed in collaboration with site community relations teams, and integrates best practices from internal and external case studies and publications. It includes concepts such as ensuring communities have the opportunity to exercise voice regarding Eldorado’s community investment decisions (in practice, this is being actively achieved in part through Community of Interest Committees) and that community investments should seek to leverage partnerships that favour promoting economic diversification and community self-reliance by helping to build human and institutional capacity.

Our global teams have been hard at work applying these principles in their work over previous years. Efemçukuru continues to successfully implement its strategic “Productive Women, Strong Futures” initiative, while Kışladağ is also proud to partner with Türkiye’s Women-Friendly Brands Platform to deliver their version, called “Women Entrepreneur Vision” program. These programs focus on the social and economic empowerment of local women, while generating broad-based community awareness on gender equality and rural development. Economic empowerment of women is a key development objective in the local contexts, with an aim to address historical socio-cultural barriers that have resulted in lower levels of education and representation of women in the workforce. We believe that a rights-based strategy focused on gender equality and investments in early and ongoing education is a powerful tool

for building local capacity and unlocking economic opportunities for local women to contribute to building long-term resilience in their communities.

We believe that investing in women is an investment in the future of our country.

Hakan Ünal, Deputy General Manager, Kışladağ Gold Mine

Similar community investment objectives are shared at the Cassandra Mines, where we are implementing a Community Development Plan and Corporate Social Responsibility (CSR)/Community Investment Plan (CIP), as part of our financing requirements from the European Bank for Reconstruction and Development. The Hellas Gold team conducts surveys to better inform its long-term community investment strategy, integrating both the perspectives of local women in the Municipality of Aristotelis, as well as our employees. Since most of our employees are residents of the communities in which we operate, their feedback will help shape more effective strategic decision-making. Hellas Gold has also been hard at work developing and implementing a best practice – KPIs to track community investment inputs, outputs and outcomes, as to ensure progress can be measured for continuous improvement. The team is also investigating opportunities to more deeply involve employees through community investment volunteering activities, much like the Volunteer Squad at Lamaque. There, our strategic community investments aim to address the unique challenge of a local labour shortage. Having employees engaged in the process allows them to contribute to sustainable development in their own community, creating a sense of ownership in helping to make Val-d’Or a better place to live and work.

Kışladağ, Uşak Province, Türkiye

Community investment work at Kışladağ focused on continuing support for improved quality of education and community infrastructure and promoting cultural heritage in Uşak and smaller local villages.

Significant investments in 2023 included drilling works for freshwater supply to the town of Ulubey, repairs to other critical infrastructure in local villages such as dam pump station and community buildings, and renovation of a children’s park. We provided materials in support of a women’s cooperative in the town of Eşme and provided our annual contribution to the Eşme cultural festival, which celebrated its 25th year and marks an important tradition for locals.

Kışladağ also implemented its “Women Entrepreneur Vision” program, in partnership with Women-Friendly Brands, which aims to support local communities, particularly members of the Eşme Women Entrepreneur Cooperative, with educational and entrepreneurial opportunities. In 2023, the program helped deliver entrepreneurial mentorship, support in seeking grants and financial incentives for cooperatives, and trainings on key topics, such as financial literacy, e-commerce and digital marketing.

Kassandra Mines, Halkidiki, Greece

Our support and cooperation with local communities in Halkidiki is deeply linked with support for our workforce, and we seek to invest in education, health care, infrastructure and the environment to support sustainable development throughout the region. In 2023, Hellas Gold achieved a collaborative milestone with local communities and established a formal community investment framework as part of its commitment to fairly and impactfully allocate \$80 million over 25 years.

Within the scope of this commitment, we made significant contributions to community infrastructure projects, including repairs to shared road networks, numerous renovations to critical public infrastructure, ongoing repairs to schools in the Municipality of Aristotelis, and technical studies for construction of culturally significant facilities. Our investments in education and youth included extended support for the EduAct program to deliver STEM workshops across four local communities and continued a scholarship for a student to study at the Anatolia College of Thessaloniki. We also partnered with “Women on Top,” a nonprofit organization that works toward economic and professional empowerment of women, to better understand the professional and educational challenges faced by women in our host communities. As part of our commitment to protecting the local environment, we donated multiple resources to municipal departments and local organizations, including waste collection bins and fuel to enable the Aero-Club of Thessaloniki to continue vital wildfire monitoring. We also provided financial support for vulnerable groups and victims of the catastrophic floods that struck Thessaly caused by Storm Daniel in September 2023.

Lamaque Complex, Québec, Canada

Community investment efforts at Lamaque focused on supporting over 130 community organizations in education, health and wellness, arts and culture and economic development. Our Volunteer Squad invested hundreds of hours working with our partners in 2023.

In 2023, Lamaque’s continued contributions as part of large-scale and long-term partnerships included the construction of the Institute of Mining and Environmental Research pavilion and support for a project with the School of Native Studies at La Fondation l’Université du Québec en Abitibi-Témiscamingue; continuation of a six-year partnership with the Fondation du Conservatoire de musique et d’art dramatique du Québec to support strategy development and promote cultural education for children; supporting the Maison de la Famille de Val-d’Or to improve services offered to families, including newcomers; and an initiative with the municipal waste management authority to purchase compost for use toward reclamation activities, while generating revenues for the city of Val-d’Or.

We also continued our financial contributions to the KIZIS project aimed at supporting youth education and health in the Nation Anishnabe du Lac Simon and the community of Kitcisakik (more information about the partnership can be found [here](#) in French) and [Fondation du Centre hospitalier de Val-d’Or](#), investing in better institutional health care locally. We are proud to provide regular support for various cultural initiatives of the Nation Anishnabe du Lac Simon, such as the annual Pow Wow, and of the community of Kitcisakik, such as the organization of a day camp.

Local Employment and Procurement

Wherever possible, we prioritize hiring local employees and working with local suppliers. This practice positively impacts local and national economies by providing well-paying jobs and generating government revenues that can be directed toward health care, education and infrastructure. Conversely, negative impacts can include inflated local prices for goods and services as well as income disparity between the mining and non-mining workforce.

We strive to purchase materials and services from companies near our sites. This enables local suppliers to develop their businesses and increase their capabilities with regard to providing a larger proportion of products and services. Domestic suppliers of goods and services are the biggest recipients of our supplier expenditure, accounting for 85% of site procurement in 2023.

OUR WORKFORCE

We believe in recruiting local employees whenever possible, including for senior roles in which local knowledge and expertise can provide advantages for our business. Where local skills exist, we are committed to providing opportunities for growth and development. In local communities that are less familiar with mining, we work to train employees and provide them with valuable and transferable skills that will have a positive legacy beyond their employment with Eldorado. We are extremely proud of our very high rates of local employment.

In accordance with the relevant laws and regulations, we uphold strong and fair labour practices. We encourage equal opportunities and base our hiring practices on skills and experience as stated in our [Diversity Policy](#). As outlined in our [Code of Ethics and Business Conduct](#) and our [Human Rights Policy](#), everyone at Eldorado is expected to maintain a safe and healthy work environment and promote a workplace that is free from discrimination and harassment. We expect our business partners, including security providers, contractors and suppliers, to share this commitment.

In 2023, our global workforce continued to grow, particularly due to expansion at Lamaque in Canada and increased works at the Skouries development project in Greece. We also maintained a leading local employment rate of 79%, and 99% of both our employees and contractors are from the countries where we operate.

99%

Across Eldorado, 99% of our employees and contractors are nationals of the country in which they work

79%

Across Eldorado, 79% of our employees are from local communities within the regions where we operate

Kışladağ, Türkiye

¹ Eldorado began reporting number of non-guaranteed work hour employees in 2023; historical data is therefore unavailable. Discrepancies between 2023 totals and sums of female and male employees are due to the inclusion of employees whose gender was not reported.

OUR CONTRACTORS

We regularly partner with contractors, particularly during the construction of new projects and when significant investments are made to our existing operations. These partnerships enable us to draw on short-term labour and leverage specific construction expertise that may not be readily available within our own workforce. Doing so also allows us to focus on our core business, while supplementing expertise, experience and labour.

Contractors that work on our sites must adhere to Eldorado's governance policies, including our [Code of Ethics and Business Conduct](#), and our [Human Rights](#), [Environmental](#), [Social Performance](#), and [Health and Safety Policies](#). Contracting companies are required to implement systems or procedures that, at a minimum, meet our requirements for social and environmental performance including the non-discrimination and freedom from forced labour and security provisions of our [Human Rights Policy](#). Our [Diversity Policy](#) also requires that third-party service providers engaged by the Board and senior management present their commitments and actions taken to support diversity, and propose working teams for Eldorado accounts that include a balanced number of individuals assembled from designated groups.

TABLE 19: CONTRACTORS BY NATIONAL REPRESENTATION

Olympias, Greece

Healthy Environments, Now and For the Future

We carefully plan, design and build operations while mitigating our environmental impacts, and work with host communities and governments to align our operations with acceptable standards of practice and regulations. By investing in technologies and implementing leading environmental practices, where feasible, we seek to safely manage tailings and waste, restore disturbed land, reduce our water and energy consumption and protect the ecosystems surrounding our sites.

INDUSTRY INNOVATION AND INFRASTRUCTURE

12

RESPONSIBLE CONSUMPTION AND PRODUCTION

Lamaque, Québec

Environmental Compliance

Environmental laws and regulations vary in each of our operating jurisdictions, and we rely on our teams across the Company to understand regulations and align our operations to legal requirements.

In addition to regional regulations, SIMS provides environmental performance requirements for all of our sites. We align our operations to international best practices and standards, including MAC's [TSM Framework](#) and the [ISO 14001 Environmental Management Systems Standard](#) at Kışladağ, Efemçukuru, Olympias and Stratoni.¹

In-country teams communicate regularly with environmental agencies and authorities to maintain compliance with regulations, and environmental authorities frequently visit our sites to conduct reviews of our compliance. Monitoring data is reviewed at least quarterly by the responsible manager and relevant information is shared with management and the Sustainability Committee through regular reporting processes. In 2023, Eldorado reported no major environmental incidents and no significant spills, and recorded no major environmental fines or penalties.

Environment teams located at each of our sites are responsible for the day-to-day oversight, implementation and management of our environmental policies, programs and activities. Each team reports directly to its Mine General Manager who in turn reports operationally through Eldorado's EVP, Technical Services & Operations, and within country to the EVP, Development, Greece, VP & Country Manager, Canada, and VP & Country Manager, Türkiye. Environment teams also maintain consistent communications with the VP, Health, Safety & Sustainability who reports to the EVP, Technical Services & Operations. The EVP, Technical Services & Operations and EVP, Development, Greece set environmental objectives and targets annually and review environmental performance regularly. Eldorado's President & CEO is ultimately accountable for our environmental performance.

ENVIRONMENTAL MANAGEMENT SYSTEMS

Eldorado's SIMS provides a global management system for environmental performance and includes a wide range of environmental performance areas. SIMS incorporates TSM, the RGMPs and other best practices related to environmental management and performance.

Eldorado is also implementing an Energy and Carbon Management System that is aligned with SIMS and TSM within our Climate Change Strategy.

We have achieved certification under the [ISO 14001 Environmental Management Systems Standard](#) at our Kışladağ and Efemçukuru mines in Türkiye and at our Kassandra Mines in Greece.

ENVIRONMENTAL IMPACT ASSESSMENTS

As our projects advance, we conduct environmental impact assessments (EIAs) to evaluate the potential impacts of a project on the environment and those who depend on it. As part of permitting, we submit environmental-impact mitigation plans to regulators and work with a wide range of stakeholders to understand, assess and mitigate our impacts. Once completed, EIAs are comprehensive documents that include baseline studies used to assess the current state of the environment at the proposed mine site.

At the end of 2021, Eldorado submitted a revised Environmental Impact Study to regulators in Greece following updated designs and plans for the Kassandra Mines. Following a public consultation period with Greek regulators during 2022, the EIA was approved in April 2023.

¹ Stratoni was in care and maintenance during 2023, but maintained relevant on-site activities.

Energy and Climate Change

Eldorado’s Climate Change Strategy describes our approach to managing climate-related risks and opportunities, including mitigation and adaptation measures, and is aligned with recommendations of the Task Force on Climate-related Financial Disclosures (TCFD).

CLIMATE-RELATED RISKS, OPPORTUNITIES AND IMPACTS

Climate change is a global issue that has the potential to impact our operations, stakeholders and the communities in which we operate. To support the resilience of our business from the direct effects of climate change, as well as the ways the world may respond to climate change, Eldorado regularly seeks to understand the risks, opportunities and impacts that may arise.

In 2020, Eldorado conducted a corporate-level climate risk and opportunities assessment to understand how climate change and the transition to a lower-carbon future could impact our business over the short-, medium- and long-term. This analysis indicated that the most immediate material risks and opportunities are related to the physical impacts of climate change and transition-related regulatory changes.

Following this assessment, in 2021, Eldorado commissioned third parties to conduct physical and transition climate scenario risk

analyses. Physical risks can be acute or longer-term changes in climate patterns (e.g., increased severity of extreme weather events or sustained higher temperatures). Transition risks include policy, legal, technology, reputation and market changes to address mitigation and adaptation requirements related to climate change (e.g., carbon pricing, climate-related litigation, renewable energy, stakeholder perceptions of a company’s contribution to, or detraction from, a low-carbon economy transition, and shifts in the supply and demand of certain commodities). Eldorado will seek to update its climate-related physical risk assessments in 2024.

For further discussion of our climate change risks and opportunities, please see our latest [Climate Change & GHG Emissions Report](#).

PHYSICAL RISKS AND OPPORTUNITIES

All of our operations are exposed to physical risks from climate change; however, the effects of climate change are highly location specific. Physical risk analyses were conducted in accordance with Eldorado’s enterprise risk management framework, which seeks to evaluate risks based on the likelihood of the Company experiencing the risk and the risk’s impact on the Company.

Climate-related physical risks and impacts for each of our operations are described in more detail in Eldorado’s latest [Climate Change & GHG Emissions Report](#).

ELDORADO’S CLIMATE CHANGE STRATEGY

SUSTAINABILITY SPOTLIGHT

ENERGY AND CLIMATE CHANGE
AT SKOURIES

The Skouries development project, part of our Kassandra Mines Complex in Greece, will produce copper and gold and generate socio-economic value locally and nationally. With its expected annual average production of 67 million pounds of copper, it is also positioned to contribute to the supply of critical minerals in a socially and environmentally responsible way.

Skouries has also been designed with meaningful consideration of energy consumption and climate change. One such way is that, over the life of the mine, production will transition from ore mined from the open pit to underground, the latter of which is generally a less emissions-intense method and may provide opportunities to implement energy-saving and low-carbon technologies. Current projects at Eldorado’s other sites, such as ventilation on demand at Olympias and Lamaque’s first electric haul truck, not only contribute to current energy savings and GHG emissions mitigations, but also act as early learning opportunities for similar technologies that can be considered for potential integration at Skouries. The project is also designed and constructed with careful considerations of climate-related physical risks.

Eldorado’s current GHG emissions mitigation target applies only to operational sites. When Skouries enters commercial production, it is expected to significantly change Eldorado’s GHG emissions profile. As Skouries advances toward commercial production, we expect to include the mine within a renewed GHG target aligned with our Climate Change Strategy.

Skouries, Greece (October 2023)

TRANSITION RISKS AND OPPORTUNITIES

Transition risks and opportunities related to climate impacts are varied and may include changes in technologies, markets and supply chains. In our 2021 transition scenario analysis study, we sought to further understand Eldorado’s exposure and opportunities related to transition risks, with a focus on modelling the impacts of rising costs of fossil fuel-based energy due to new carbon-pricing regulations.

Currently, none of Eldorado’s operating sites are subject to an emissions-limiting regulation program or a government program that directly requires emissions reduction. However, Canada, Greece and most recently Türkiye have signed on to the Paris Agreement, which defines a commitment to reduce GHG emissions with the goal of limiting the global average temperature increase to 1.5 degrees Celsius above pre-industrial levels. This means that all the jurisdictions in which we operate have now made commitments or taken steps, including the implementation of carbon markets or carbon pricing regimes, toward decarbonization.

Climate-related transition risks for each of our operations are described in more detail in Eldorado’s latest [Climate Change & GHG Emissions Report](#).

OUR GHG EMISSIONS MITIGATION TARGET

As we implement our Climate Strategy to reduce GHG emissions, we recognize the importance of holding our progress to account through measurement and disclosure.

This is why Eldorado has set a target to mitigate Scope 1 and Scope 2 GHG emissions by an amount equal to 30% of our 2020 baseline from current operating mines by 2030, on a “business-as-usual” basis.¹

This target accounts for the potential future growth of our operations and energy needs of our sites, while focusing on discrete and available opportunities to reduce emissions as our first step toward decarbonization.

Operating mines included in the target are Lamaque, Kışladağ, Efemçukuru, Olympias and Stratoni.² Eldorado does not expect uniform GHG emission reductions from each operating mine. Progress toward the target will be measured on a discrete basis by quantifying GHG emission mitigations and reductions relative to a “business-as-usual” scenario. As new mines come into operation, our GHG emissions may increase. While operations other than those listed above are not currently included in our target, Eldorado will seek to integrate carbon considerations into the design and construction of new projects, such as through implementation of energy efficient systems, technologies and processes and procurement of energy from low-carbon and renewable sources, in alignment with our Climate Change Strategy.

¹ Eldorado’s target to mitigate Scope 1 and Scope 2 GHG emissions by an amount equal to 30% of its 2020 GHG emissions baseline from current operating mines is equal to approximately 59,000 tCO₂e. This figure is a restatement of the value provided in Eldorado’s 2021 Sustainability Report and 2021 Climate Change & GHG Emissions Report in accordance with the [Greenhouse Gas Protocol Corporate Accounting and Reporting Standard](#), as a result of using newly available electricity grid emissions factors published on a two-year delay for our operational jurisdictions and revisions to our calculation methodologies.

² Stratoni was in care and maintenance during 2023.

ENERGY

Our energy consumption is the primary determinant of our ability to contribute to global climate change goals. We source our energy mainly from fossil fuels such as diesel, liquefied petroleum gas (LPG), gasoline and natural gas as well as electricity. Our portable light towers, emergency backup generators and most of our heavy vehicle fleet operate on diesel fuel, while our light vehicle fleet uses LPG and gasoline. We also use natural gas to power a small number of haul trucks at Kışladağ and for building and mine heating. Electricity is primarily used for mining and milling operations. Electricity is sourced from national grids. In line with our Climate Change Strategy, Eldorado will evaluate on-site renewable energy production and seek to work with energy suppliers to identify and procure low-carbon sources of energy. Procuring low-carbon energy coupled with mine electrification will significantly support the effective decarbonization of our operations.

In 2023, our total direct and indirect energy consumption was 2,530,515 gigajoules (GJ), of which 24% was generated from renewable sources.¹ While the Skouries development project ramped up construction during 2023, requiring over three times more energy use from the previous year, Eldorado reduced its total energy consumption by approximately 3%, in large part due to reductions of direct energy use at nearly all other sites. While the Lamaque Complex is able to access grid electricity provided by Hydro-Québec, which produces nearly emissions-free hydroelectricity, access to renewable sources of energy is still limited, yet growing, in our other operating jurisdictions. Through the ongoing implementation of Eldorado’s Energy and Carbon Management System we continue to investigate opportunities to use energy more efficiently, reduce energy consumption and procure cleaner energy supplies, where feasible.

FIGURE 4: ENERGY SOURCES (GJ)¹

¹ Direct and indirect energy use figures for 2021 have been restated from Eldorado's 2021 Sustainability Report and 2021 Climate Change & GHG Emissions Report as a result of revisions to our calculation methodologies and assumptions. All of Eldorado's sites are grid connected. The percentage proportions of total renewable energy consumed and total non-renewable energy consumed at each site are estimated based on publicly available national grid energy generation breakdowns applied to purchased electricity. These percentage data are published on a multi-year delay, and as such, total non-renewable electricity and total renewable electricity for 2021 and 2022 in Table 22 have also been restated from historical reports. There was no on-site activity at the Perama Hill development project in 2023. The Certej development project is a non-core asset to Eldorado's portfolio, but maintained limited on-site activity in 2023. Apparent discrepancies in totals in this table are due to rounding of final figures.

GREENHOUSE GAS EMISSIONS

In 2023, Eldorado’s combined Scope 1 and Scope 2 GHG emissions decreased by approximately 2% from 2022 levels.

While our GHG emissions have increased from our baseline in 2020 as expected, driven primarily by the growth and expansion of our mines, we have continued to operationalize Eldorado’s ECMS through the development and implementation of energy and carbon mitigation projects across our operations. This work includes accounting the energy and emissions mitigated toward achieving our GHG emissions mitigation target through continuous improvement, projects, technologies and energy sourcing.

Following a preliminary screening of Scope 3 GHG emissions in 2022 that was based on assumptions related to our procurement activities and expenditures across the value chain, in 2023 we began our first assessment of Eldorado’s inventory for upstream and downstream emissions for operating sites (Kışladağ, Efemçukuru, Lamaque, Olympias) and corporate and regional offices. This process includes an evaluation of 15 categories as defined by the [Greenhouse Gas Protocol Technical Guidance for Calculating Scope 3 Emissions](#), and involves significant engagement with our supply chain partners to source primary data.

In 2024, we will seek to report on our quantified Scope 3 emissions for the first time in our upcoming 2023 Climate Change & GHG Emissions Report and advance ECMS implementation toward decarbonization of our operating mines and energy supplies.

FIGURE 5: GREENHOUSE GAS EMISSIONS (tCO₂e)¹

TABLE 23: SCOPE 1 GREENHOUSE GAS EMISSIONS BY SITE (tCO₂e)¹

Site	Diesel – Mobile Equipment	Diesel – Stationary Equipment	Explosives	Gasoline – Mobile Equipment	LPG – Mobile Equipment	LPG – Stationary Equipment	Natural Gas	2023 Total	2022 Total	2021 Total
Kışladağ	61,748	1,984	1,089	–	–	–	834	65,654	74,803	85,966

2022 Total	99,833	4,407	1,603	276	–	6	4,923			
2021 Total	111,013	3,570	2,032	167	4	144	4,776			

¹ Some Scope 1 GHG emissions totals for 2021 and 2022 have been restated from Eldorado’s 2021 and 2022 Sustainability Reports and Climate Change & GHG Emissions Reports, as a result of revisions to our calculation methodologies and assumptions and to ensure more accurate year-over-year comparison. There was no on-site activity at the Perama Hill development project in 2023. The Certej development project is a non-core asset to Eldorado’s portfolio, but maintained limited on-site activity in 2023. Apparent discrepancies in totals in this table are due to rounding of final figures.

Scope 1 emissions are generated by any fuels consumed or energy produced on-site, including diesel, gasoline, natural gas and propane (LPG), as well as emissions released from the combustion of explosives. Diesel use in mobile and stationary equipment accounts for 91% of our Scope 1 GHG emissions and 46% of our combined Scope 1 and Scope 2 GHG emissions. The Kışladağ mine is our largest consumer of diesel and emits over half of Eldorado's GHG emissions due to the site's relatively large size and open-pit operations that require it to move significant quantities of material.

In 2023, Eldorado's Scope 1 GHG emissions decreased by 7%, largely due to Kışladağ completing construction of its new heap leach pad and waste rock dump sites. Direct emissions at Eldorado's remaining sites remained consistent with the previous year, with the exception of the Skouries development project, as it was taken out of care and maintenance and restarted construction during 2023. As our operating mines advance production and mine ore at greater depths, the resulting increase in materials handling, throughput and haul distances lead to progressively higher direct energy consumption.

As all of Eldorado's operating sites are grid-connected, Scope 2 GHG emissions depend on both the amount of electricity consumed by the operation and the carbon intensity of the grid from which we are purchasing electricity. For example, in Québec, electricity is generated almost entirely from hydropower and produces relatively negligible GHG emissions, while in Greece and Türkiye, electricity grids continue to rely heavily on fossil fuels. In 2023, Eldorado consumed more electricity as it advanced mine expansion and production, resulting in a 5% increase in calculated indirect GHG emissions.

Eldorado also measures its emissions efficiencies on the bases of tonnes of ore processed, ounces of gold produced and revenue. On a production basis, Lamaque is our most efficient operation. On a throughput basis, Kışladağ is our most efficient operation due to its bulk tonnage. Eldorado's overall GHG emissions intensities decreased significantly in 2023, meaning we were able to process more ore, produce more gold, and generate more value, all while having a proportionally lower marginal impact on the atmosphere than in previous years.

TABLE 24: SCOPE 2 GREENHOUSE GAS EMISSIONS (tCO₂e)¹

	2023 Total	2022 Total	2021 Total
Kışladağ	49,267	42,600	40,658
Efemçukuru	20,546	21,115	21,772
Lamaque	100	99	42
Olympias	24,504	24,164	23,988
Stratoni	3,308	5,369	7,422
Skouries	1,692	1,047	898
Certej	35	37	47
Total	99,450	94,431	94,826

FIGURE 6: 2021 SCOPE 3 GREENHOUSE GAS EMISSIONS SCREENING RESULTS, BY SITE³

FIGURE 7: 2021 SCOPE 3 GREENHOUSE GAS EMISSIONS SCREENING RESULTS, BY CATEGORY³

TABLE 25: SCOPE 1 AND SCOPE 2 GHG EMISSION INTENSITY²

	tCO ₂ e/Tonne Ore Milled	tCO ₂ e/oz Au Produced	tCO ₂ e/\$M Revenue
Kışladağ	0.0087	0.74	377
Efemçukuru	0.0525	0.33	168
Lamaque	0.0218	0.10	53
Olympias	0.0703	0.48	171
2023 Total	0.0129	0.40	192
2022 Total	0.0151	0.44	277
2021 Total	0.0164	0.43	229

1 Some Scope 2 GHG emissions totals for 2021 and 2022 have been restated from Eldorado's 2021 and 2022 Sustainability Reports and Climate Change & GHG Emissions Reports, as a result of using newly available electricity grid emissions factors published on a two-year delay for our operational jurisdictions, revisions to our calculation methodologies and assumptions, and to ensure more accurate year-over-year comparison. All of Eldorado's sites are grid connected. There was no on-site activity at the Perama Hill development project in 2022. The Certej development project is a non-core asset to Eldorado's portfolio, but maintained limited on-site activity in 2022.

2 Intensity metrics are calculated based on full-year operating data for gold-producing mines only. Some figures for 2021 and 2022 have been restated compared to Eldorado's 2021 and 2022 Sustainability Reports and Climate Change & GHG Emissions Reports to reflect small revisions in calculated emissions and enable more accurate year-over-year comparison. GHG emissions intensity on a tCO₂e/oz Au produced basis for 2021 and 2022 excludes Stratoni, as it produced concentrates. Stratoni was in care and maintenance during 2022 and 2023 and did not process ore from the Mavres Petres mine as it did in 2021. Olympias also produces silver, lead and zinc, and total metal revenues are included for emissions-efficiency calculations.

3 Screening of Eldorado's 2021 Scope 3 GHG emissions for operational mines (Kışladağ, Efemçukuru, Lamaque, Olympias) and corporate and regional offices was conducted using the Quantis Scope 3 Evaluator within a hybrid approach, based on an analysis of procurement spend and various operational metrics and associated assumptions. Figures disclosed are estimates and should not be considered an accurate representation of Eldorado's total Scope 3 GHG emissions inventory for 2021. Scope 3 Category 11: Use of sold products and Category 14: Franchises GHG emissions are estimated to be zero and are not relevant to Eldorado's products or business activities.

SUSTAINABILITY CASE STUDY

ELECTRIFICATION AT ELDORADO GOLD QUÉBEC

In 2023, Eldorado Gold Québec achieved a milestone and integrated the Sandvik TH550B electric truck into its fleet of mobile equipment. This truck, with a maximum capacity of 50 tonnes and increased ramp speed, is another step toward improving production efficiency, improving the health and safety of workers and mitigating our GHG emissions.

The introduction of this electric truck is part of Eldorado Gold Québec's progressive fleet electrification strategy and also supports transportation electrification efforts on the Sigma-Lamaque underground ramp. As the first mining company in Québec to adopt this technology, Eldorado Gold Québec worked closely with Sandvik to implement these state-of-the-art electric trucks.

“We are pleased to be able to begin electrifying our underground operations with the arrival of this electric truck, which will bring us several benefits, particularly in terms of mitigating our GHG emissions, but also improving certain aspects of the health and safety of our employees,” said Sylvain Lehoux, VP & Country Manager, Canada. “We are all looking forward to seeing this technology in action and actively pursuing our efforts towards decarbonizing our operations.”

Although Lamaque is already our lowest GHG-emitting gold mine, thanks in large part to access to hydroelectricity and the implementation of energy efficiency projects, it is estimated that full operationalization of this electric truck will mitigate an estimated 1,700 tCO₂e per year.¹ In addition, this transition to electric trucks will improve the health and safety of workers by improving air quality and reducing noise.

Eldorado Gold Québec remains committed to continuing its efforts to constantly improve its environmental practices and contribute to the energy transition.

¹ Based on preliminary testing and use of equipment. Annual performance against greenhouse gas emission targets is disclosed in our annual Climate Change & GHG Emissions Report.

Lamaque, Québec

Tailings and Waste

Eldorado is committed to implementing leading practices in tailings management.

Eldorado is proud of our tailings management stewardship, and we work to mitigate associated risks through the use of technologies, such as dry-stack tailings. We also implement leading management practices such as establishing an Independent Tailings Review Board (ITRB).

Eldorado’s Technical Services, Operational Support function oversees and manages Eldorado’s tailings facilities. We rely on Engineers of Record and third-party experts to support the design, construction, operation, maintenance, surveillance and closure of tailings facilities. Eldorado’s EVP, Technical Services & Operations is responsible for overseeing the operation, management and commercial matters related to tailings management facilities. Ultimately, Eldorado’s President & CEO is responsible for the Company’s tailings management practices. Eldorado’s Technical Committee of the Board provides oversight of technical matters related to tailings, and the Sustainability Committee has oversight of sustainability-related tailings matters.

Our Global Tailings Stewardship Program integrates with SIMS and leading external frameworks, including TSM and the RGMPs, and will seek to bring consistency and create a shared knowledge base across our global operations. The program captures all stages and areas of tailings management and governance, including design, construction, operation, closure, monitoring, inspection, analysis, risk assessment, audit, training, emergency response and preparedness, stakeholder engagement and communications.

IMPLEMENTING LEADING PRACTICES

Tailings are created when mined ore is processed through water-based solutions to separate valuable metals from surrounding rock. Once metals are separated and collected, the remaining mixture of water, waste rock and residual chemicals must be stored securely.

Tailings are typically stored in a slurry form, within purposely constructed tailings dams or tailings management facilities (TMFs). Properly designed, constructed and maintained TMFs pose manageable risks when maintained according to designed conditions. Tailings containment failure is typically due to design conditions not being maintained. Containment failure of wet tailings has higher consequences to the surrounding environment due to higher flow-ability.

Dry-stack technology is an alternative method of tailings management that removes most of the water from tailings. The water is recycled for future mining uses or treated and discharged into the environment and the dry tailings are transported and stored in TMFs.

Eldorado currently utilizes dry-stack tailings at our Efemçukuru and Olympias mines. Dry-stack tailings from the Olympias mine are stored at the Kokkinolakkas Tailings Management Facility. As a heap leach operation, Kışladağ does not produce tailings. The Integrated Extractive Waste Management Facility under construction at Skouries is designed as a dry-stack facility.

Eldorado’s SIMS aligns with internationally recognized best practice and corporate commitments under the WGC’s RGMPs and MAC’s TSM. Lamaque and Olympias underwent Eldorado’s SIMS Compliance Verification in

2022 and 2023, respectively, and both achieved Level AAA under the MAC-TSM [Tailings Management Protocol](#) based on an external verification, which is the highest level of performance a site can achieve.

Eldorado maintains an ITRB to further strengthen design, operational and governance practices. In 2023, the ITRB engaged with Eldorado’s global tailings management teams and conducted a site visit at the Lamaque Complex. The site visits provided opportunities for our internal teams to learn from world-class experts on safe tailings design, construction and operation. The ITRB process continues to provide Eldorado with valuable opinions and non-binding recommendations to continuously strengthen the safety of our tailings facilities globally. The ITRB will seek to conduct biannual reviews of Eldorado’s tailings management facilities globally.

BENEFITS OF DRY-STACK TAILINGS MAY GENERALLY INCLUDE

TAILINGS AND WASTE MANAGEMENT

Mining generates various forms of waste, including overburden, waste rock, tailings, slag, mine water, sludge and refuse. Eldorado sorts and classifies all the waste generated as either hazardous or non-hazardous. In line with environmental and industrial waste regulations, Eldorado stores and disposes of all waste responsibly.

TABLE 26: TAILINGS MANAGEMENT FACILITIES¹

Facility (Mine – Location)	Tailings Type	Facility Construction	Current Status	Canadian Dam Association Consequence Classification	Most Recent Review
Aurbel Tailings Storage Facility (Lamaque – Québec, Canada)	Slurried tailings	Upstream	Care and maintenance since 2019	Significant	2023
Efemçukuru Tailings Storage Facility (Efemçukuru – İzmir Province, Türkiye)	Dry-stack tailings	Downstream	In operation	Significant	2023
Kokkinolakkas Tailings Management Facility (Olympias and Stratoni – Halkidiki, Greece)	Dry-stack tailings	D/S embankment: Downstream U/S embankment: Centreline	In operation	Significant	2023
Lamaque Dormant Tailings Facility (Lamaque – Québec, Canada)	Settled slurried tailings	Upstream	Closed since 1989	High	2023
Sigma Tailings Storage Facility (Lamaque – Québec, Canada)	Slurried tailings (alternative methods being considered)	Reinforced rock buttressed upstream	In operation	High	2023
Skouries Integrated Extractive Waste Management Facility (Skouries – Halkidiki, Greece)	Permitted for dry-stack tailings	Downstream	Design stage	Significant	2023

¹ Kışladağ operates a heap leach facility and therefore does not produce tailings.

SUSTAINABILITY CASE STUDY

CONCURRENT REHABILITATION USING CITY COMPOST

In 2023, Eldorado Gold Québec received the Québec Mining Association’s Distinction Award in the Environment category, for its innovative project that reuses waste from the municipality as inputs to progressively rehabilitate the Sigma tailings storage facility.

Our partnership with the MRC de la Vallée-de-l’Or (MRCVO) is the key to successfully implementing this initiative, which uses compost, wastewater treatment outputs, and other organic materials produced by the city to regenerate soil at the tailings site. Not only does this integrative project help generate value for the MRCVO, but it enables us to responsibly and proactively manage our tailings-related impacts by boosting regrowth of vegetation and promoting local biodiversity health, long before closure.

| Lamaque, Québec

SUSTAINABILITY SPOTLIGHT

RESPONSIBLE MANAGEMENT OF THE KIŞLADAĞ HEAP LEACH FACILITY

At Kışladağ, we operate heap leach facilities to extract gold from mined ore and, in doing so, we apply strict management practices and voluntary standards to mitigate associated risks and uphold the safety and health of our people, host communities and the environment.

What is heap leaching?

Heap leaching starts with placing crushed ore onto a dedicated, lined area, called a heap leach pad, using conveyors. New ore is stacked in layers known as “lifts,” which are separated by liners constructed of high-density polyethylene membranes. Diluted cyanide solution is irrigated through the stacked ore to leach out gold. The interlift liners direct the gold-laden solution to a system of collection pipes leading to lined ponds before it is pumped to a processing plant. Dissolved gold is recovered at the adsorption, desorption and regeneration (ADR) plant using activated carbon and further refined into gold doré.

How does Eldorado responsibly manage its heap leach facilities?

At Kışladağ, Eldorado operates the South Heap Leach Pad and commenced stacking on the newly constructed North Heap Leach Pad in July 2023.

Responsible water management is a top priority in the design and operation of our heap leach facilities. The mine is bounded by a series of collection ditches that divert non-contact water around the site, while all

contact water within the site, including the heap leach facilities, is collected in ponds for treatment and use. All ponds, including those containing cyanide solution, are lined with double high-density polyethylene membranes and fitted with leak detection pipes and pumps. All ponds are designed to withstand, at minimum, a 100-year, 24-hour storm event. Ponds are covered with floating high-density polyethylene (HDPE) balls to reduce evaporation and to inhibit wildlife contact with the cyanide solution. Continuous treatment of contact water and recirculation of process solution mean that Kışladağ recycles most of the water it withdraws.

In addition to the heap leach facility process ponds, there are several additional ponds available, including a dedicated storm water event pond to contain excess overflow solution and a second to manage a storm water event that exceeds the one-in-100 year condition. Facilities are designed to keep water and solution in a closed circuit. An emergency hydrogen peroxide detoxification circuit is in place to reduce the cyanide concentration of solution that may be discharged under extreme circumstances.

As water is limited in the region, local communities are supplied with potable water from sources several kilometres away from the mine site. Eldorado supported the construction of potable water infrastructure in the region and continues to support the maintenance of this infrastructure as discussed in the Community Investment section of this report.

Once ore leaves the crushing plant at Kışladağ, it travels via electric conveyors for kilometres to reach the heap leach pad, mitigating significant quantities of GHG emissions that would result from truck haulage as an alternative transport method. Opportunities in support of our Climate Change Strategy and GHG emissions mitigation target are under investigation for the heap leach facilities, including energy efficiency measures for the conveyor system and the process solution pumping circuit.

Kışladağ has maintained an environmental management plan since before it entered production that includes an extensive monitoring program for elements such as surface water and groundwater, flora and fauna, waste and hazardous waste

storage, as well as social factors. To rehabilitate areas no longer needed for operations, the mine uses progressive reclamation techniques that are in alignment with SIMS Standards and international frameworks.

Eldorado is a signatory to the International Cyanide Management Institute (ICMI). As a requirement in SIMS, the Kışladağ mine adheres to the International Cyanide Management Code (ICMC), a voluntary certification program of best practices for the management of cyanide in gold mining and was recertified for a fourth time following an independent audit in 2022.

Detailed technical information about Kışladağ’s heap leach facilities can be found in the latest Technical Report on our [website](#).

Kışladağ, Türkiye

BENEFITS OF HEAP LEACHING MAY GENERALLY INCLUDE

- Closed-loop recirculation of solution allows low water withdrawal and high water recycling rates
- Low energy requirements for processing proportionally high quantities of ore
- Eliminates the need for separate tailings disposal
- Relatively simple and self-contained process

TABLE 27: AMOUNT OF MINERAL WASTE GENERATED (TONNES)¹

Sites	Overburden	Non-Acid-Generating Waste Rock	Potentially Acid-Generating Waste Rock	Tailings	2023 Total	2022 Total	2021 Total

2022 Total	7,652	27,646,983		1,644,740			
2021 Total	–	34,728,920		1,638,052			

1 Eldorado began collecting data on waste rock generated disaggregated by potentially acid-generating and non-acid-generating in 2023, and as such, historical data for 2022 and 2021 are reported only at an aggregated level representing the total amount of potentially acid-generating and non-acid-generating waste rock. Eldorado began reporting mine water treatment waste under tailings at Stratoni for 2023 and historical data is unavailable. Total tailings produced at Efemçukuru and total waste rock produced at Lamaque in 2021 are restated from Eldorado's 2021 Sustainability Report, following accounting amendments. There was no relevant on-site activity at the Perama Hill and Certej development projects.

TABLE 28: AMOUNT OF NON-MINERAL WASTE GENERATED (TONNES)²

Sites	Non-Hazardous						Hazardous			2023 Total
	Metals	Domestic Waste	Paper and Plastics	Wood	Tires	Other	Used Oil	Contaminated Soil	Other	
Kışladağ	1,660	175	188	162	13	537	202	3	1,251	4,191
Efemçukuru	542	286	120	60	–	114	53	4	131	1,310
Lamaque	535	523	65	30	–	–	–	–	1,406	2,559
Kassandra Mines	1,061	–	34	–	–	3,790	28	–	673	5,585
Total	3,798	984	407	252	13	4,441	283	7	3,461	13,645

2 Eldorado began collecting data for amounts of non-mineral waste generated in 2023, and as such, historical data are unavailable. Non-mineral waste streams at Olympias, Stratoni and Skouries are managed together and therefore accounted only at an aggregated level for the Kassandra Mines. These data were not collected from the Perama Hill and Certej development projects. Waste is categorized as “non-hazardous” or “hazardous” according to local regulations in each operating jurisdiction. Apparent discrepancies in totals in this table are due to rounding of final figures.

Eldorado generated approximately 27 million metric tonnes of mineral waste during 2023. This represents an 8% reduction from the previous year, in large part due to lower volumes of waste rock generated at Kışladağ, related to the completion of its new North Heap Leach Pad. All waste rock generated at Kışladağ is classified as non-hazardous waste according to local regulation, including potentially acid-generating waste rock. Kışladağ operates heap leach facilities and therefore does not generate tailings. Both existing and newly deposited ore are continually in process and not considered waste, and therefore not accounted in this report.

In Greece, mineral wastes generated from mining operations are managed across multiple geographic sites and there exists a latency between generation and diversion or storage, resulting in wastes being accounted across more than one year. As such, the total amounts of mineral wastes generated during 2023 may not equal the sum of total wastes diverted from or directed to storage. In 2023, waste rock generated at the Skouries development project was a result of restarting construction. Tailings generated at Stratoni are quantities of mine water treatment sludge from the Mavres Petres and Madem-Lakkos mines, which are respectively considered non-hazardous and hazardous, and both are categorized as mineral waste according to local regulation. The Olympias and Stratoni site teams also manage historical mineral wastes left behind by previous owners, which are not considered waste generated by Eldorado, and are therefore not accounted in this report.

In 2023, Eldorado began collecting and reporting data on non-mineral waste, where “other” non-mineral wastes may include industrial water treatment plant sludge and processing wastes – where they are not considered mineral waste by local regulations, such as carbon fines and slag – as well as electronics, batteries, chemicals, concrete, mixed packaging, paints and other contaminated materials.

TABLE 29: AMOUNT OF MINERAL WASTE DIVERTED FROM STORAGE (TONNES)¹

Sites	Overburden	Non-Acid-Generating Waste Rock	Potentially Acid-Generating Waste Rock	Tailings	2023 Total	2022 Total	2021 Total
Kışladağ	–	1,419,984	–	–	1,419,984	579,661	3,878
Efemçukuru	–	15,000	–	232,133	247,133	239,316	239,991
Lamaque	–	–	–	–	–	95,163	–
Olympias	–	55,988	–	190,312	246,300	266,244	282,692
Stratoni	–	–	–	–	–	25,830	48,533
Skouries	–	28,621	–	–	28,621	–	–
Certej	–	–	–	–	–	–	–
Total	–	1,519,593	–	422,445	1,942,038	1,206,214	575,094
2022 Total	–	579,661		626,553			
2021 Total	–	3,878		571,216			

1 Eldorado began collecting data on waste rock diverted from storage disaggregated by potentially acid-generating and non-acid-generating in 2023, and as such, historical data for 2022 and 2021 are reported only at an aggregated level representing the total amount of potentially acid-generating and non-acid-generating waste rock. Kışladağ operates a heap leach facility and does not produce tailings. Waste rock generated at Kışladağ is classified as non-hazardous waste according to local regulation, including potentially acid-generating waste rock. There was no relevant on-site activity at the Perama Hill and Certej development projects.

TABLE 30: AMOUNT OF NON-MINERAL WASTE DIVERTED FROM DISPOSAL (TONNES)²

Sites	Non-Hazardous			Hazardous			2023 Total
	Recycled Off Site	Preparation for Reuse Off Site	Other Recovery Operations Off Site	Recycled Off Site	Preparation for Reuse Off Site	Other Recovery Operations Off Site	
Kışladağ	78	2,483	–	–	334	–	2,895
Efemçukuru	–	–	836	–	–	188	1,024
Lamaque	630	–	–		–	–	630
Kassandra Mines	2,966	–	1,918	28	–	673	5,585
2023 Total	3,674	2,483	2,754	28	334	861	10,134

2 Eldorado began collecting data for amounts of non-mineral waste diverted from disposal in 2023, and as such, historical data are unavailable. Non-mineral waste streams at Olympias, Stratoni and Skouries are managed together and therefore accounted only at an aggregated level for the Kassandra Mines. These data were not collected from the Perama Hill and Certej development projects. Waste is categorized as “non-hazardous” or “hazardous” according to local regulations in each operating jurisdiction.

In 2023, Eldorado diverted nearly 2 million metric tonnes of mineral waste from storage, representing approximately 7% of its total mineral waste generated. This is also a 61% increase from the previous year, largely a result of waste rock used in construction activities – Skouries used 100% of its waste rock generated for on-site infrastructure and Kışladağ used 30% of its waste rock generated to construct the new North Heap Leach Pad. Tailings were also diverted from storage and used in mine backfill paste at Efemçukuru and Olympias. All mineral wastes generated that are diverted from storage are recovered for use in on-site activities and are non-acid-generating and classified as non-hazardous according to local regulations.

All non-mineral wastes diverted from disposal are managed by municipal or contracted third-party waste management providers at off-site facilities.

TABLE 31: AMOUNT OF MINERAL WASTE DIRECTED TO STORAGE (TONNES)¹

Sites	Overburden	Non-Acid-Generating Waste Rock	Potentially Acid-Generating Waste Rock	Tailings	2023 Total	2022 Total	2021 Total

2023 Total	984	1,119	2	1,406	3,510

² Eldorado began collecting data for amounts of non-mineral waste directed to disposal in 2023, and as such, historical data are unavailable. These data were not collected from the Perama Hill and Certej development projects. Waste is categorized as “non-hazardous” or “hazardous” according to local regulations in each operating jurisdiction. Apparent discrepancies in totals in this table are due to rounding of final figures.

All of our mineral waste generated that is not recovered for use in on-site activities is directed to purposely engineered facilities owned by Eldorado, such as waste rock dumps and tailings management facilities. For example, mineral waste generated at the Olympias mine in 2023 was directed to storage at the Kokkinolakkas TMF (KTMF).

As part of our commitment to rehabilitating historical sites, the inherited mineral wastes (contaminated soils) managed at Olympias and Stratoni in 2023 – amounting to approximately 348,000 and 165,000 metric tonnes, respectively – are also stored at the KTMF. However, these amounts have been excluded from data tables in this report, as they do not result from Eldorado’s mining activities. Mine water treatment sludge at Stratoni (from the Mavres Petres and Madem-Lakkos mines) is also directed to KTMF. The majority (80%) of our mineral waste directed to storage is potentially acid-generating waste rock at Kışladağ, classified as non-hazardous according to local regulation, that is not reused for construction activities.

All non-mineral wastes directed to disposal are managed by municipal or contracted third-party waste management providers at off-site facilities.

Eldorado does not use mercury in its operations or supply chains to extract gold.

Water and Air

WATER USE

Availability and access to water is critical for our mining operations. We use water for mineral processing, dust suppression, slurry transport and personal consumption. Responsible management of water resources is therefore essential to our long-term sustainable development, and to our environmental stewardship and relationships with local stakeholders.

Our SIMS Water Stewardship standard requires sites to seek continuous improvement of water efficiency through water recycling, where feasible. We strictly control water use and each operation is implementing practices in support of this objective.

Water use is continuously monitored using flow meters, and we regularly take water quality samples from groundwater and surface water sources within and around our sites. We compare water-quality results with the limit values set out in pertinent regulations and our operating permits, and we share these detailed results with regulators and government, typically on a quarterly basis.

Environmental teams at each of our sites are responsible for day-to-day water management activities, including implementation of our policies, programs and engaging with regulators. They report through the Mine General Manager, and Eldorado’s EVP, Technical Services & Operations is responsible for overseeing water management and performance across our operations. Ultimately, Eldorado’s President & CEO is responsible for the Company’s water-related matters, and independent oversight is provided by the Sustainability Committee of the Board.

Some regions where we operate, including Türkiye, are more prone to water stress, and we work carefully to manage water as a shared resource. In regions such as Greece, water stress can be accompanied by periods of increased precipitation. Eldorado’s SIMS Water Stewardship standard provides a set of minimum performance requirements for Eldorado’s water management practices, including managing water in conformance with Level A of the MAC-TSM Water Stewardship Protocol. Lamaque and Olympias have each undergone their first SIMS Compliance Verifications and respectively achieved Level AAA and Level A under the MAC-TSM Water Stewardship Protocol.

Olympias, Greece

HOW WE INTERACT WITH WATER¹

Site	 Withdrawal <i>All water drawn from surface water, groundwater, seawater or a third party for any use</i>	 Consumption <i>All water that has been withdrawn and used in production, evaporated, transpired, generated as waste, newly stored or otherwise rendered unusable to others, and is therefore not released back to surface water, groundwater, seawater or a third party</i>	 Discharge <i>All water that has been withdrawn and released to surface water, groundwater, seawater or a third party</i>
Kışladağ Gediz River and Büyük Menderes River Basins Water Stress: Extremely High (>80%)	Water is withdrawn actively from a renewable groundwater well field near the operation. Water also enters the site as surface water in the form of precipitation, which is considered contact water and must be managed, including dewatering of inflows to the open pit. A relatively small amount of water is entrained in mined ore (moisture content). The mine site is bounded by designed collection ditches that divert non-contact water outside of the site’s footprint, which is not withdrawn. In 2023, Kışladağ’s accounted water withdrawals increased, as a combined result of higher amounts of precipitation onto a larger operational footprint, following the commissioning of the North Heap Leach Pad, and the addition of produced water from moisture entrained in processed ore, which was not included in previous years.	Pumped groundwater is consumed in processing activities, including crushing, milling, screening, agglomeration, overland conveying, heap leaching and the ADR carbon plant. Heap leaching is a closed-cycle process, where water used in the leachate solution is continuously recirculated (click here for more information). It is also used for dust suppression activities, closed-loop truck washing, and human consumption. All contact water is collected in ponds prior to treatment and reused only for dust suppression on site. The Kışladağ mine operates an industrial water treatment plant with appropriate treatment technologies. Remaining consumption is a result of minor losses attributable to natural evaporation from ponds and other surface infrastructure. In 2023, Kışladağ’s accounted water consumption increased due to the commissioning of the North Heap Leach Pad and the inclusion of produced water from moisture entrained in processed ore, which was not included in previous years. Most of this water remains in the ore as it is deposited on the heap leach, where it becomes part of the site’s leaching circuit. The mine also began using a dust suppression product that allowed it to reduce freshwater consumption for dust control by approximately 50% compared to 2022. Kışladağ proactively advanced its responsible management of water and collected 164,000m³ of rainwater that was used in the newly constructed North Heap Leach Pad when it began operation. It is also working to further increase water recycling and reduce withdrawals by improving water-related infrastructure toward increased use of treated water for dust suppression and processing activities.	Only water used for human consumption (drinking and sanitation) and treated contact water is discharged into the Elmalı Stream. All discharges are completed in accordance with the site’s discharge permits. In 2023, Kışladağ’s accounted water discharges increased due to additional contact water that had to be managed and was not consumed, resulting from higher amounts of precipitation onto a larger operational footprint.

¹ Water stress is assessed using World Resources Institute data at the time of writing this report: www.wri.org/aqueduct. The Certej development project is a non-core asset to Eldorado's portfolio, but maintained limited on-site activity in 2023.

HOW WE INTERACT WITH WATER¹ (CONTINUED)

Site	 Withdrawal <i>All water drawn from surface water, groundwater, seawater or a third party for any use</i>	 Consumption <i>All water that has been withdrawn and used in production, evaporated, transpired, generated as waste, newly stored or otherwise rendered unusable to others, and is therefore not released back to surface water, groundwater, seawater or a third party</i>	 Discharge <i>All water that has been withdrawn and released to surface water, groundwater, seawater or a third party</i>
Efemçukuru Küçük Menderes River Basin Water Stress: Extremely High (>80%)	Water is withdrawn by dewatering the underground mine of renewable groundwater inflows and seepage. Water also enters the site as surface water in the form of precipitation and on-site springs, which are considered contact water and must be managed. A relatively small amount of water is entrained in mined ore (moisture content). Bottles of drinking water are supplied for human consumption. The mine site is bounded by designed collection ditches that divert non-contact water outside of the site's footprint, which is not withdrawn. In 2023, although Efemçukuru experienced higher volumes of precipitation, its overall water withdrawals decreased slightly. This is due to lower groundwater withdrawals, because seepage caused by precipitation takes significant time to reach the underground mine.	All contact water is collected in ponds and treated prior to use in processing activities, including crushing, milling and flotation. Water is reclaimed from dewatering of wastes and dewatering of the flotation concentrate filter press, and process water is recirculated. The Efemçukuru mine operates an industrial water treatment plant. Treated water is also used for dust suppression activities and sanitation; domestic wastewater is treated in a separate, closed-loop domestic wastewater treatment plant. Water is also consumed in past backfill. Remaining consumption is a result of minor losses attributable to natural evaporation from ponds and other surface infrastructure. Efemçukuru uses dry-stack tailings, which contains very little water compared to wet tailings. In 2023, Efemçukuru's accounted water consumption was negative, as it discharged more water than it withdrew. This is possible due to the discharge of water that was withdrawn in previous years, such as water temporarily stored in the site's water management infrastructure.	Excess treated water from the treatment plant that is not used at the operation continues to be discharged in the Kokarpinar Stream, in accordance with the site's water discharge permits. The water volume discharged in 2023 decreased slightly from the prior year because of lower water inflows to the underground mine during the reporting year. The treated water quality continued to meet discharge permit requirements and is equal to or better than the background water quality. In response to changes in regulations, we are developing alternatives to our current discharges, including reuse of treated water on site.
Lamaque Complex Harricana River Basin Water Stress: Low (<10%)	Water is withdrawn through active boreholes in the mine and by dewatering the underground mine of renewable groundwater inflows and seepage. Water also enters the site as surface water in the form of precipitation, which is considered contact water and must be managed. A relatively small amount of water is entrained in mined ore (moisture content). Water for human consumption is withdrawn from the municipal water grid. The mine site is bounded by designed collection ditches that divert non-contact water outside of the site's footprint, which is not withdrawn. In 2023, accounted water withdrawals at Lamaque increased due to significant dewatering of the old Sigma underground mine.	All contact water is collected in settling ponds and passively treated prior to use in processing activities, including crushing, milling, thickening, and leaching and recovery circuits. Water used for processing, collected in the tailings storage facility, and used for human consumption and sanitation is treated and recirculated for reuse in processing. Remaining consumption is a result of minor losses attributable to natural evaporation from ponds and other surface infrastructure, including the tailings storage facility. In 2023, Lamaque accounted higher water consumption due to increased withdrawals at Sigma, while total discharge remained relatively constant.	Water used for processing that is not recirculated is discharged following treatment in the polishing pond, in accordance with the site's discharge permits. In 2023, Lamaque's water discharges remained relatively constant from the previous year.

¹ Water stress is assessed using World Resources Institute data at the time of writing this report: www.wri.org/aqueduct. The Certej development project is a non-core asset to Eldorado's portfolio, but maintained limited on-site activity in 2023.

HOW WE INTERACT WITH WATER¹ (CONTINUED)

Site	 Withdrawal <i>All water drawn from surface water, groundwater, seawater or a third party for any use</i>	 Consumption <i>All water that has been withdrawn and used in production, evaporated, transpired, generated as waste, newly stored or otherwise rendered unusable to others, and is therefore not released back to surface water, groundwater, seawater or a third party</i>	 Discharge <i>All water that has been withdrawn and released to surface water, groundwater, seawater or a third party</i>
Olympias Basdekis River and Mavrolakkas River Basins Water Stress: High (40–80%)	Water is withdrawn through active boreholes near the mine and by dewatering the underground mine renewable groundwater inflows and seepage. Water also enters the site as surface water in the form of precipitation, which is considered contact water and must be managed. A relatively small amount of water is entrained in mined ore (moisture content). Bottles of drinking water are supplied for human consumption. The mine site is bounded by designed collection ditches that divert non-contact water outside of the site's footprint, which is not withdrawn. In 2023, Olympias accounted lower water withdrawals, mainly as a result of lower volumes of groundwater inflows, seepage and precipitation during one of the driest seasons in recent years.	All dewatering and contact water is collected in settling ponds and most of it is treated prior to use in processing activities, including crushing, milling and flotation. A relatively small amount of water withdrawn from boreholes is used in reagent mixing, domestic and other minor uses. Water is reclaimed from dewatering of wastes and dewatering of the flotation concentrate filter press, and process water is recirculated. The Olympias mine operates an industrial water treatment plant. Treated water is also used for dust suppression and truck washing. A relatively small amount of water from settling ponds is stored for process make-up and firefighting. Water is also consumed in paste backfill, as well as the plant nursery. Remaining consumption is a result of minor losses attributable to natural evaporation from ponds. Olympias uses dry-stack tailings at KTMF, which contains very little water compared to wet tailings. In 2023, Olympias accounted less water consumed, resulting from lower withdrawals and discharge.	Only excess water from underground dewatering, primarily during the wet season, is discharged into the Mavrolakkas stream after settling and treatment, in accordance with the site's discharge permits. In 2023, Olympias' accounted water discharges were reduced, due to a proportional reduction in water withdrawals.
Skouries Asprolakkas River Basin Water Stress: High (40–80%)	Once in operation, water will be withdrawn through dewatering wells around the open pit and dewatering/depressurization wells around underground mine workings (intercepting some non-contact groundwater before it reaches the open pit and underground workings). Water withdrawals also include dewatering the underground mine renewable groundwater inflows and seepage, as well as surface water caused by precipitation, all of which are considered contact water and must be managed. The mine site is bounded by designed collection ditches that divert non-contact water outside of the site's footprint, a small amount of which will be intercepted (withdrawn actively). The site will control the release of diverted water to Karolakkas Creek through engineered structures for erosion control. In 2023, accounted water withdrawals at Skouries remained relatively constant.	Once in operation, water from dewatering wells will be used in processing, dust suppression, human consumption and stored for firefighting. Intercepted diverted non-contact water will be used to supplement water used in processing and for dust suppression. Surplus contact water will be collected in surface ponds and treated in an industrial water treatment plant. In 2023, calculated water consumption at Skouries appears to decrease significantly. However, this is due to changes in water discharge accounting and data availability, as we continuously improve our data management systems.	Once in operation, excess non-contact water from dewatering wells and excess treated contact water will be reinjected to the groundwater aquifer in accordance with the site's discharge permits. In 2023, Skouries reported controlled discharges of withdrawn groundwater.

¹ Water stress is assessed using World Resources Institute data at the time of writing this report: www.wri.org/aqueduct. The Certej development project is a non-core asset to Eldorado's portfolio, but maintained limited on-site activity in 2023.

HOW WE INTERACT WITH WATER¹ (CONTINUED)

Site	 Withdrawal <i>All water drawn from surface water, groundwater, seawater or a third party for any use</i>	 Consumption <i>All water that has been withdrawn and used in production, evaporated, transpired, generated as waste, newly stored or otherwise rendered unusable to others, and is therefore not released back to surface water, groundwater, seawater or a third party</i>	 Discharge <i>All water that has been withdrawn and released to surface water, groundwater, seawater or a third party</i>
Stratoni Kokkinolakkas Creek and Stratoni River Basins Water Stress: High (40-80%)	Water is withdrawn by dewatering the Mavres Petres and Madem-Lakkos historical underground mines renewable groundwater inflows and seepage that must be managed. Water withdrawals accounted at Stratoni also include surface water inflows caused by precipitation at KTMF. Water for human consumption is withdrawn from the municipal water grid. The site is bounded by designed collection ditches that divert non-contact water outside of the site's footprint, which is not withdrawn. In 2023, accounted water withdrawals at Stratoni decreased as a result of lower volumes of groundwater inflows and seepage.	Water from underground dewatering and KTMF is directed to the site's industrial water treatment plants. Municipal water is use for human consumption and domestic uses. In 2023, Stratoni was in care and maintenance and did not consume water for processing activities. However, it accounted a relatively constant and low water consumption due to its active mine water management activities and use in offices.	Water is discharged after treatment into Stratoni bay, in accordance with the site's discharge permits. In 2023, Stratoni's accounted water discharges were reduced, due to a proportional reduction in water withdrawals.
Certej Mureş River Basin Water Stress: Low (<10%)	Water is withdrawn from the municipal water grid, primarily for human consumption.	Water is used primarily for human consumption and sanitation.	Water is discharged back into the municipal water grid for treatment.

¹ Water stress is assessed using World Resources Institute data at the time of writing this report: www.wri.org/aqueduct. The Certej development project is a non-core asset to Eldorado's portfolio, but maintained limited on-site activity in 2023.

TABLE 33: WATER WITHDRAWALS (000 m³)¹

Certej	–	–
Total	35,761	69
2022 Total	35,049	69

1 All water withdrawals are considered freshwater (≤1,000 mg/L total dissolved solids). Eldorado does not withdraw seawater, non-renewable groundwater or third-party water other than from municipal water supplies or purchased drinking water in bottles or water trucks. Figures may include estimates where water withdrawals are not measured, such as surface water originating from precipitation or produced water from ore moisture content, based on assumptions unique to each site – not all sites reported these estimates in 2023. Kışladağ began reporting produced water from ore moisture content and Efemçukuru began reporting purchased drinking water in 2023. Contact surface water from precipitation is not reported at Skouries and that from the Kokkinolakkas TMF is accounted in Stratoni’s groundwater withdrawals. Water measurement capabilities and accounting methodologies improved in 2022, rendering historical data reported in Eldorado’s previous Sustainability Reports inadmissible for comparison. There was no on-site activity at the Perama Hill development project in 2023. The Certej development project is a non-core asset to Eldorado’s portfolio, but maintained limited on-site activity in 2023.

2 Eldorado did not discharge to groundwater or third-party water other than to municipal wastewater treatment in 2023. All water discharges are considered freshwater (≤1,000 mg/L total dissolved solids), except for domestic wastewater discharged to the municipal grid at the Certej development project, a non-core asset to Eldorado’s portfolio that maintained limited on-site activity. Skouries began reporting water discharges, while it is still in the construction phase during 2023, which also has a direct effect on its calculated water consumption. Water measurement capabilities and accounting methodologies improved in 2022, rendering historical data reported in Eldorado’s previous Sustainability Reports inadmissible for comparison. Apparent discrepancies in totals reported are due to rounding of final figures. There was no on-site activity at the Perama Hill development project in 2023.

TABLE 37: WATER EFFICIENCY (000 m³)¹

Site	Water Withdrawals/ Tonne Processed	Water Withdrawals/oz Au Produced	Water Withdrawals/ Revenue (\$ millions)
Kışladağ	0.0003	0.022	11.1
Efemçukuru	0.0038	0.024	12.2
Lamaque	0.0042	0.020	10.1
Olympias	0.0064	0.043	15.5
2023 Total	0.0008	0.024	11.8
2022 Total	0.0008	0.023	12.0

¹ Water measurement capabilities and accounting methodologies improved in 2022, rendering historical data reported in Eldorado's previous Sustainability Reports inadmissible for comparison. Water efficiency is reported for operational mines only. Olympias also produces silver, lead and zinc, and total metal revenues are included for withdrawal efficiency calculations. See also Footnote 1 on previous page.

AIR AND DUST

We recognize the impacts of air pollution and dust to our workforce, surrounding communities and the environment, and actively work to manage pollution and dust at our operating sites. Within SIMS, we have established an Air, Noise and Vibration Management standard that aligns with internationally recognized best practices, such as the [IFC General EHS Guidelines](#), and includes requirements such as maintaining dust control and air quality monitoring plans. At operations that generate more dust due to weather conditions and open pit activities, we are actively working to monitor and manage particulate matter in accordance with the [World Health Organization's global air quality guidelines](#), through methods such as dust suppression solutions on haul roads during drier months.

Efemçukuru, Türkiye

Biodiversity and Reclamation

Eldorado designs and constructs our projects to minimize land disturbance while prioritizing a safe working environment for our employees and contractors.

Constructing and operating our mines can have a significant impact on local land, environments and communities. Environmental reclamation practices such as deconstructing closed facilities, treating contaminated soil and revegetating areas where trees and/or other plants were removed help to revitalize the impacted land. Environment teams at each of our sites are responsible for reclamation activities, under the direction of the respective Mine General Manager, and EVP, Development, Greece, VP & Country Manager, Canada, and VP & Country Manager, Türkiye for their respective jurisdiction. At the corporate level, Eldorado’s EVP, Technical Services & Operations is responsible for the reclamation of disturbed land. Ultimately, Eldorado’s President & CEO is responsible for advancing environmental reclamation, and these activities are overseen by the Sustainability Committee at the Board level.

Eldorado considers biodiversity, deforestation and reclamation in our planning and management activities. We operate plant nurseries at Olympias and Kışladağ for the reclamation of both historical and current mining areas. To date, we planted nearly 96,000 saplings over an area of 106 hectares at Kışladağ, including complete reclamation of the waste rock area, and donated hundreds more to a local village, proudly contributing to revegetation and reforestation of the surrounding region. In 2023, we moved over 340,000 tonnes of old tailings and contaminated soils at the Olympias historical tailings area and seeded and planted well over 3,000 units of native flora to revegetate the historical stockpile waste rock area.

Eldorado does not operate or own sites in any of the following internationally recognized protected areas: International Union for Conservation of Nature (IUCN) Protected Area Categories I-III,¹ UNESCO World Heritage Sites, UNESCO Man and the Biosphere Reserves, Convention on Wetlands of International Importance (Ramsar Convention).

¹ The Skouries project overlaps a small area of approximately 112 ha of the nationally designated Skouries-Kasteli-Kakkavos Wildlife Reserve K129, categorized as IUCN Management Category IV by the European Environment Agency. It is estimated that the impacts will be of “insignificant” importance, based on an environmental impact assessment. For more information, see the Kassandra Mines EIA available on Eldorado’s website [here](#).

TABLE 38: TOTAL AMOUNT OF LAND DISTURBED AND RESTORED (HECTARES)²

Site	Total Land Disturbed and Not Yet Rehabilitated (ha) Opening Balance	Total Amount of Land Newly Disturbed Within the Reporting Period (ha)	Total Amount of Land Newly Rehabilitated Within the Reporting Period to the Agreed End Use (ha)	Total Land Disturbed and Not Yet Rehabilitated (ha) Closing Balance
Kışladağ	1,066.3	105.0	–	1,171.3
Efemçukuru	38.1	4.5	0.8	41.8
Lamaque	277.6	–	–	277.6
Olympias	25.2	0.1	–	25.3
Stratoni	56.3	–	1.7	54.6
Skouries	156.2	27.5	–	183.7
Certej	18.9	–	–	18.9
2023 Total	1,638.6	137.1	2.5	1,773.1
2022 Total	1,615.3	54.2	30.9	1,638.6
2021 Total	1,579.5	59	23.2	1,615.4

² Values have been restated compared to Eldorado’s previous Sustainability Reports to reflect revisions in historical data at Kışladağ and Efemçukuru, as well as divestiture in Brazilian asset Tocantinzinho in 2021. Stratoni was in care and maintenance and there was no on-site activity at the Perama Hill and Certej development projects in 2023. Apparent discrepancies in totals reported are due to rounding of final figures.

TABLE 39: TOTAL NUMBER OF IUCN RED LIST SPECIES WITH HABITATS AFFECTED BY OPERATIONS, BY LEVEL OF EXTINCTION RISK³

Site	Least Concern	Near Threatened	Vulnerable	Endangered	Critically Endangered
Kışladağ	90	1	6	6	–
Efemçukuru	152	1	9	1	–
Lamaque	6	2	1	1	–
Olympias	44	6	5	–	–
Stratoni	35	4	2	–	–
Skouries	55	4	2	–	–
2023 Total	382	18	25	8	–

³ Eldorado began collecting limited data for IUCN Red List species habitat affected by operations in 2023, and as such, historical data are unavailable. These data were not collected for the Perama Hill and Certej development projects.

SUSTAINABILITY CASE STUDY

PROTECTING “SFIKIARIS” AT SKOURIES

The European honey buzzard (*Pernis apivorus*), or Sfikiaris, as it is known in Greece, is a migratory bird of prey that spends most of its days in Africa and visits parts of Greece each year for the breeding and nesting season.

In the spring of 2023, pre-construction surveying was carried out by our Environmental Department and, together with local ornithologists, an active Sfikiari nest was identified near our Skouries development project. To avoid physical and visual disturbance to the birds, a wide protection zone was defined and mapped surrounding the site and we suspended activities in the area until the birds finished nesting at the end of August. Our field team frequently visited the nest to monitor the well-being and growth of the two chicks into adulthood. The same diligent approach was applied to protect other active nests, including that of White-backed woodpeckers and Tawny owls.

Hellas Gold is actively implementing its Biodiversity Management Plan at the Kassandra Mines, which includes such provisions for the protection of local flora and fauna, seeks to reduce loss of habitat and ecosystem services, and contains other avoidance, minimization and restoration objectives. Employees and contractors also receive biodiversity training and our Environmental Department has created an accessible bilingual (Greek and English) photographic guide to help identify local flora and fauna, including native plants, small and large mammals, reptiles, amphibians, birds and invertebrates. The goal of this comprehensive and easy-to-use guide is to enable our workforce to learn about local plants and animals and actively participate in their protection.

Skouries, Greece

We also monitor potential contamination associated with acid rock drainage (ARD) at each of our sites and, where necessary, develop mitigation plans to protect surrounding environments. Across our operations, we reclaim land on an ongoing basis.

TABLE 40: ACID ROCK DRAINAGE RISKS AND MITIGATION

Sites	Are ARD-Generating Materials Present?	How Is ARD Mitigated?	Is ARD Under Treatment or Remediation?
Kışladağ	Yes	Storing or covering sulfide-bearing minerals to prevent oxidation	Yes
Efemçukuru	No	N/A	N/A
Lamaque	No	N/A	N/A
Olympias	Yes	Flood prevention and mine sealing	Yes
Stratoni	Yes	Flood prevention and mine sealing	Yes
Skouries	No	N/A	N/A
Certej	Yes	N/A ¹	No

¹ The Certej development project is not constructed and is a non-core asset to Eldorado's portfolio.

Acid rock drainage is a common phenomenon in the mining industry, as material that was previously buried below layers of soil and rock is exposed to air and water on the earth's surface. The result is a chemical reaction that may cause substances to leach from the rock and into the environment. To mitigate against the impacts of ARD, we work to manage water flows through known areas that may produce ARD.

We also rely on covering and sealing ARD-generating materials in designated storage areas to mitigate the risks posed to the surrounding environment. Managing and mitigating ARD is an important part of our mine plans and closure plans, and is addressed within SIMS, which includes requirements such as conformance with Level A of the MAC-TSM Biodiversity Conservation Management Protocol and implementation of Biodiversity Management Plans. Lamaque and Olympias underwent Eldorado's SIMS Compliance Verification in 2022 and 2023, respectively, and both achieved Level AAA under the MAC-TSM Biodiversity Conservation Management Protocol.

Olympias, Greece

2023 Disclosure Index

FOR THE PERIOD JANUARY 1 – DECEMBER 31, 2023.

This index depicts general alignment of topics discussed within Eldorado’s 2023 Sustainability Report, as well as other public disclosures and documents with the referenced reporting frameworks.

This index does not intend to certify completeness of disclosures, nor compliance with or conformance to the referenced indicators and principles.

Efemçukuru, Türkiye

GRI Content Index

ELDORADO GOLD CORP. (ELDORADO) HAS REPORTED WITH REFERENCE TO THE GRI STANDARDS FOR THE PERIOD JANUARY 1, 2023 TO DECEMBER 31, 2023.

Eldorado used GRI 1: Foundation 2021, GRI Universal Standards and GRI Topic Standards, pending development of a GRI Sector Standard for Mining.

GRI UNIVERSAL STANDARDS AND TOPIC STANDARDS

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado’s 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
GRI 2: General Disclosures 2021					
Disclosure 2-1	Organizational Details	About Eldorado Gold [p. 3]; About This Report [p. 4]; Where We Operate [p. 8-11]			Fully reported
Disclosure 2-2	Entities included in the organization's sustainability reporting	About Eldorado Gold [p. 3]; About This Report [p. 4]; Where We Operate [p. 8-11]	For more information on Eldorado’s entities, please see our latest Annual Information Form on our website .	Eldorado’s Sustainability Report includes all wholly-owned entities in its financial reporting, with a focus on operating mines and inclusion of assets in care and maintenance and development projects, where relevant during the reporting period. Our approach does not involve adjustments to information for minority interests or differ across the disclosures in this Standard and across material topics. Footnotes regarding acquisitions or divestments are made throughout the report, where relevant.	Fully reported
Disclosure 2-3	Reporting period, frequency and contact point	About This Report [p. 4]		Eldorado’s Sustainability Report is published on May 31, 2024 and covers the period from January 1, 2023 to December 31, 2023. Eldorado reports on an annual basis, covering the same period as its financial reporting. Comments or questions should be directed to Investor Relations by following www.eldoradogold.com/contact-us . Therefore, management of each material topic is discussed in its respective section of the report.	Fully reported

GRI 201: Economic Performance 2016

Disclosure 201-1	Direct economic value generated and distributed	About Eldorado Gold [p. 3]; Governance and Transparency (Transparency of Payments to Governments) [p. 28]; Community Investment [p. 58-61]; Local Employment and Procurement (Our Contractors) [p. 65]	See also Eldorado's latest Annual Report and ESTMA report .		Fully reported
Disclosure 201-2	Financial implications and other risks and opportunities due to climate change	Energy and Climate Change [p. 68-74]	See also Eldorado's latest Climate Change & GHG Emissions Report .		Eldorado does not report the costs of actions taken to manage climate-related risks or opportunities.
Disclosure 201-3	Defined benefit plan obligations and other retirement plans				Eldorado does not collect or report on this indicator, as this information is subject to multiple jurisdictions globally, each with different and context-specific practices.
Disclosure 201-4	Financial assistance received from government		See Eldorado's latest Annual Report .		Fully reported

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
GRI 202: Market Presence 2016					
Disclosure 202-1	Ratios of standard entry level wage by gender compared to local minimum wage			Eldorado's pay practices are compliant with local legislation and we seek to compensate employees competitively, without distinction of gender.	Eldorado does not report on this indicator.
Disclosure 202-2	Proportion of senior management hired from the local community				Eldorado does not report on this indicator.
GRI 203: Indirect Economic Impacts 2016					
Disclosure 203-1	Infrastructure investments and services supported	Community Investment [p. 58-61]			Eldorado does not report details about its infrastructure investments and services supported, such as nature (i.e., commercial, in-kind or pro bono), size, cost or duration.
Disclosure 203-2	Significant indirect economic impacts	Our Sustainability Integrated Management System (UN Sustainable Development Goals) [p. 19-20]; How Our Products Contribute to Society [p. 44]; Community Investment [p. 58-61]			Fully reported
GRI 204: Procurement Practices 2016					
Disclosure 204-1	Proportion of spending on local suppliers	Local Employment and Procurement (Our Contractors) [p. 65]		Eldorado defines “local procurement” as in-country spend to domestic suppliers. Eldorado's “significant locations of operation” are the jurisdictions (i.e., countries) where its operating mines are located.	Fully reported

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
GRI 205: Anti-corruption 2016					
Disclosure 205-1	Operations assessed for risks related to corruption	Governance and Transparency (Eliminating Bribery and Corruption) [p. 27]		Corruption and bribery are part of Eldorado's regular risk assessment processes.	Eldorado does not report on this indicator.
Disclosure 205-2	Communication and training about anti-corruption policies and procedures	Governance and Transparency (Eliminating Bribery and Corruption) [p. 27]			Eldorado does not report on this indicator.
Disclosure 205-3	Confirmed incidents of corruption and actions taken	Governance and Transparency (Eliminating Bribery and Corruption) [p. 27]		No legal actions related to corruption were taken against Eldorado in 2023.	
GRI 206: Anti-competitive Behaviour 2016					
Disclosure 206-1	Legal actions for anti-competitive behaviour, anti-trust, and monopoly practices			No legal actions related to anti-competitive behaviour, anti-trust, or monopoly practices were taken against Eldorado in 2023.	
GRI 207: Tax 2019					
Disclosure 207-1	Approach to tax		See Eldorado's latest Responsible Gold Mining Principles Report .		Eldorado does not report on this indicator.
Disclosure 207-2	Tax governance, control and risk management				Eldorado does not report on this indicator.
Disclosure 207-3	Stakeholder engagement and management of concerns related to tax				Eldorado does not report on this indicator.
Disclosure 207-4	Country-by-country reporting	Governance and Transparency (Transparency of Payments to Governments) [p. 27]	See also Eldorado's latest Annual Report and latest ESTMA Report .		Fully reported

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
GRI 301: Materials 2016					
Disclosure 301-1	Materials used by weight or volume	Tailings and Waste [p. 79-81]			Eldorado does not report on materials used other than ore processed.
Disclosure 301-2	Recycled input materials used	Tailings and Waste [p. 79-81]			Eldorado does not report on this indicator.
Disclosure 301-3	Reclaimed products and their packaging materials				Eldorado does not report on reclaimed products and their packaging materials, as this information is not relevant to its business in gold mining.
GRI 302: Energy 2016					
Disclosure 302-1	Energy consumption within the organization	Energy and Climate Change (Energy) [p. 71]	See also Eldorado's latest Climate Change & GHG Emissions Report .		Fully reported
Disclosure 302-2	Energy consumption outside of the organization				Eldorado does not report this indicator.
Disclosure 302-3	Energy intensity	Energy and Climate Change (Energy) [p. 71]	See also Eldorado's latest Climate Change & GHG Emissions Report .	Eldorado's total direct (fuel) and indirect (electricity) energy intensity in 2023 was 5.02 GJ/oz Au produced. This includes energy consumed only by gold-producing sites during 2023 (KIS, EFM, LMQ, OLY).	Fully reported
Disclosure 302-4	Reduction of energy consumption	Energy and Climate Change (Energy) [p. 71]	See also Eldorado's latest Climate Change & GHG Emissions Report .	Eldorado reduced its year-over-year total direct (fuel) and indirect (electricity) energy consumption in 2023 by 3%, as a combined result of operational changes and energy efficiency and reduction initiatives. Eldorado's total direct (fuel) and indirect (electricity) energy consumption in 2023 increased by 9% from its 2020 baseline, primarily due to increased energy requirements as our mines expand and increase production.	Fully reported
Disclosure 302-5	Reductions in energy requirements of products and services	Energy and Climate Change (Energy) [p. 71]	See also Eldorado's latest Climate Change & GHG Emissions Report .	See response to Disclosure 302-3 Energy intensity.	Fully reported

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
GRI 303: Water and Effluents 2018					
Disclosure 303-1	Interactions with water as a shared resource	Environmental Compliance [p. 67]; Water and Air [p. 82-86]			Eldorado does not report on its approach to identify and engage on water-related impacts and does not have water-related goals or targets at the global level.
Disclosure 303-2	Management of water discharge-related impacts	Water and Air [p. 82-86]			Eldorado does not report on minimum standards for quality of effluent discharge and how these standards were determined.
Disclosure 303-3	Water withdrawal	Water and Air [p. 83-88]			Fully reported
Disclosure 303-4	Water discharge	Water and Air [p. 83-88]			Eldorado does not report information on “priority substances of concern for which discharges are treated.”
Disclosure 303-5	Water consumption	Water and Air [p. 83-88]			Fully reported
GRI 304: Biodiversity 2016					
Disclosure 304-1	Operational sites owned, leased, managed in, or adjacent to, protected areas and areas of high biodiversity value outside protected areas	Biodiversity and Reclamation [p. 89]	See also the Kassandra Mines EIA for more information.		Fully reported
Disclosure 304-2	Significant impacts of activities, products and services on biodiversity	Biodiversity and Reclamation [p. 89-91]	See also the Kassandra Mines EIA for more information.		Fully reported
Disclosure 304-3	Habitats protected or restored	Biodiversity and Reclamation [p. 89-91]			Eldorado does not report on this indicator.

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
Disclosure 304-4	IUCN Red List species and national conservation list species with habitats in areas affected by operations	Biodiversity and Reclamation [p. 89]			Fully reported
GRI 305: Emissions 2016					
Disclosure 305-1	Direct (Scope 1) GHG emissions	Energy and Climate Change (Greenhouse Gas Emissions) [p. 72-74]	See also Eldorado's latest Climate Change & GHG Emissions Report .	Reported GHG emissions are those under its operational control and include CO ₂ , CH ₄ and N ₂ O. Emissions factors were sourced from a combination of National Inventory Reports of the countries where we operate, as well as the UK Department for Environment, Food & Rural Affairs (DEFRA) Conversion factors 2023 for our operations in Europe. Global warming potentials were sourced from IPCC's Fifth Assessment Report (CO ₂ – 1; CH ₄ – 28; N ₂ O – 265).	Eldorado does not report biogenic CO ₂ emissions, as all fuel use was assumed 100% petroleum-based in the calculation methodology.
Disclosure 305-2	Energy indirect (Scope 2) GHG emissions	Energy and Climate Change (Greenhouse Gas Emissions) [p. 72-74]	See also Eldorado's latest Climate Change & GHG Emissions Report .	Reported GHG emissions are those under its operational control and include CO ₂ , CH ₄ and N ₂ O. Emissions factors were sourced from a combination of National Inventory Reports of the countries where we operate, as well as the UK Department for Environment, Food & Rural Affairs (DEFRA) Conversion factors 2023 for our operations in Europe. Global warming potentials were sourced from IPCC's Fifth Assessment Report (CO ₂ – 1; CH ₄ – 28; N ₂ O – 265).	Eldorado does not report market-based energy indirect (Scope 2) GHG emissions.
Disclosure 305-3	Other indirect (Scope 3) GHG emissions	Energy and Climate Change (Greenhouse Gas Emissions) [p. 72-74]	See also Eldorado's latest Climate Change & GHG Emissions Report .		Eldorado will seek to report its estimated other indirect (Scope 3) GHG emissions for the first time in its upcoming 2023 Climate Change & GHG Emissions Report. Eldorado currently reports screening results of its 2021 other indirect (Scope 3) GHG emissions.

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
Disclosure 305-4	GHG emissions intensity	Energy and Climate Change (Greenhouse Gas Emissions) [p. 73]	See also Eldorado's latest Climate Change & GHG Emissions Report .	Reported GHG emissions are those under its operational control and include CO ₂ , CH ₄ and N ₂ O. Emissions factors were sourced from a combination of National Inventory Reports of the countries where we operate, as well as the UK Department for Environment, Food & Rural Affairs (DEFRA) Conversion factors 2023 for our operations in Europe. Global warming potentials were sourced from IPCC's Fifth Assessment Report (CO ₂ – 1; CH ₄ – 28; N ₂ O – 265).	Fully reported
Disclosure 305-5	Reduction of GHG emissions		See also Eldorado's latest Climate Change & GHG Emissions Report .		Eldorado will seek to report this information in its upcoming 2023 Climate Change & GHG Emissions Report.
Disclosure 305-6	Emissions of ozone-depleting substances (ODS)				Eldorado does not report on this indicator.
Disclosure 305-7	Nitrogen oxides (NOx), sulfur oxides (SOx) and other significant air emissions				Eldorado does not report on this indicator.

GRI 306: Waste 2020

Disclosure 306-1	Waste generation and significant waste-related impacts	Tailings and Waste [p. 75-81]			Fully reported
Disclosure 306-2	Management of significant waste-related impacts	Tailings and Waste [p. 75-81]			Fully reported
Disclosure 306-3	Waste generated	Tailings and Waste [p. 79]			Fully reported
Disclosure 306-4	Waste diverted from disposal	Tailings and Waste [p. 80]			Fully reported
Disclosure 306-5	Waste directed to disposal	Tailings and Waste [p. 81]			Fully reported

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
GRI 308: Supplier Environmental Assessment 2016					
Disclosure 308-1	New suppliers that were screened using environmental criteria				Eldorado does not report on this indicator.
Disclosure 308-2	Negative environmental impacts in the supply chain and actions taken		See also Eldorado's latest Responsible Gold Mining Principles Report .		Eldorado does not report on this indicator.
GRI 401: Employment 2016					
Disclosure 401-1	New employee hires and employee turnover	Inclusive Diversity (Inclusive Diversity in Our Workforce) [p. 39]			Eldorado reports rates for new employee hires and employee turnover, rather than absolute numbers.
Disclosure 401-2	Benefits provided to full-time employees that are not provided to temporary or part-time employees			Our operations provide benefits based on the needs of our employees, local practices and in accordance with local legislation.	Eldorado does not report on this indicator.
Disclosure 401-3	Parental leave				Eldorado does not report on this indicator.
GRI 402: Labor Management/Relations 2016					
Disclosure 402-1	Minimum notice periods regarding operational changes			Eldorado seeks to comply with local legislation on minimum notice periods regarding operational changes.	Eldorado does not report on this indicator.
GRI 403: Occupational Health and Safety 2018					
Disclosure 403-1	Occupational health and safety management system	Occupational Health and Safety (Health and Safety Management Systems) [p. 30]	See Eldorado's Health and Safety Policy .	Eldorado seeks to comply with all relevant regulations and legal requirements related to Health and Safety, which vary by operating jurisdiction.	Fully reported
Disclosure 403-2	Hazard identification, risk assessment and incident investigation	Occupational Health and Safety [p. 29-34]	See Eldorado's Health and Safety Policy .		Eldorado does not report in detail on its processes for hazard identification, risk assessment and incident investigation.
Disclosure 403-3	Occupational health services	Occupational Health and Safety [p. 29-34]			Eldorado does not report in detail on its occupational health services.

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
Disclosure 403-4	Worker participation, consultation and communication on occupational health and safety	Occupational Health and Safety [p. 29-34]			Eldorado does not report in detail on worker participation, consultation and communication on OH&S.
Disclosure 403-5	Worker training on occupational health and safety	Occupational Health and Safety (Health and Safety Training) [p. 33]			Fully reported
Disclosure 403-6	Promotion of worker health	Inclusive Diversity (Supporting Opportunities for Women and Other Designated Groups) [p. 36-37]; Labour Standards [p. 41]			Fully reported
Disclosure 403-7	Prevention and mitigation of occupational health and safety impacts directly linked by business relationships	Occupational Health and Safety (Health and Safety Beyond the Mine; Emergency Preparedness) [p. 34]			Fully reported
Disclosure 403-8	Workers covered by an occupational health and safety management system	Occupational Health and Safety (Health and Safety Management Systems) [p. 30]		All Eldorado employees (3,024 – 100%) and contractors (1,845 – 100%) working on Eldorado's sites are covered under our health and safety management systems. All of Eldorado's operational sites are required to regularly undergo SIMS Compliance Verification, which includes an internal audit against SIMS performance standards and external assurance against the Mining Association of Canada's Towards Sustainable Mining Safety and Health Protocol and the World Gold Council's Responsible Gold Mining Principles.	Fully reported
Disclosure 403-9	Work-related injuries	Occupational Health and Safety [p. 29-30]			Eldorado does not separately report work-related injuries for workers who are not employees (contractors), as contractors are included in Eldorado's health and safety performance tracking. Eldorado does not separately report high-consequence work-related injuries or information on work-related hazards that pose a risk of high-consequence injury.
Disclosure 403-10	Work-related ill health	Occupational Health and Safety [p. 29-30]			Eldorado does not report work-related ill-health separately from health and safety performance.

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
GRI 404: Training and Education 2016					
Disclosure 404-1	Average hours of training per year per employee	Training and Professional Development [p. 40]			Fully reported
Disclosure 404-2	Programs for upgrading employee skills and transition assistance programs	Training and Professional Development [p. 40]			Eldorado does not report on transition assistance programs.
Disclosure 404-3	Percentage of employees receiving regular performance and career development reviews			Eldorado seeks for all employees (100%) to undergo performance reviews annually at minimum.	Eldorado does not report on this indicator.
GRI 405: Diversity and Equal Opportunity 2016					
Disclosure 405-1	Diversity of governance bodies and employees	Inclusive Diversity [p. 35-39]			Eldorado began reporting according to the prescribed age groups “under 30,” “30-50” and “over 50” in 2023 (age groups used in previous years were “30 and under,” “31 to 45,” “46 to 60” and “61 and over”). Eldorado does not report on indicators of diversity other than gender and age (such as minority or vulnerable groups).
Disclosure 405-2	Ratio of basic salary and remuneration of women to men	Labour Standards [p. 41]		Eldorado's pay practices are compliant with local legislation and we seek to compensate employees competitively, without distinction of gender.	Eldorado does not report on this indicator.
GRI 406: Non-discrimination 2016					
Disclosure 406-1	Incidents of discrimination and corrective actions taken				Eldorado does not report on this indicator.

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
GRI 407: Freedom of Association and Collective Bargaining 2016					
Disclosure 407-1	Operations and suppliers in which the right to freedom of association and collective bargaining may be at risk	Labour Standards [p. 41]	See Eldorado's latest Responsible Gold Mining Principles Report .	Eldorado supports freedom of association and collective bargaining rights in accordance with Eldorado's policies.	Eldorado does not report on operations or suppliers in which the right to freedom of association and collective bargaining may be at risk.
GRI 408: Child Labour 2016					
Disclosure 408-1	Operations and suppliers at significant risk for incidents of child labour	Labour Standards [p. 41]; Product Responsibility (Contractor and Supplier Management) [p. 46]	See Eldorado's latest Responsible Gold Mining Principles Report .		Eldorado has published a Modern Slavery Report, in accordance with applicable Canadian legislation, for the financial year ended December 31, 2023.
GRI 409: Forced or Compulsory Labour 2016					
Disclosure 409-1	Operations and suppliers at significant risk for incidents of forced or compulsory labour	Labour Standards [p. 41]; Product Responsibility (Contractor and Supplier Management) [p. 46]	See Eldorado's latest Responsible Gold Mining Principles Report .		Eldorado has published a Modern Slavery Report, in accordance with applicable Canadian legislation, for the financial year ended December 31, 2023.
GRI 410: Security Practices 2016					
Disclosure 410-1	Security personnel trained in human rights policies or procedures	Human Rights Security [p. 48]	See also Eldorado's Human Rights Policy .	All employees and contractors, including security personnel, are required to comply with Eldorado's Human Rights Policy.	Eldorado has published a Modern Slavery Report, in accordance with applicable Canadian legislation, for the financial year ended December 31, 2023.
GRI 411: Rights of Indigenous Peoples 2016					
Disclosure 411-1	Incidents of violations involving rights of Indigenous peoples	Human Rights [p. 47]; Engagement (Engaging with Indigenous Peoples) [p. 56]	See Eldorado's Human Rights Policy and Social Performance Policy . See also Eldorado's latest Responsible Gold Mining Principles Report .		Eldorado does not report on this indicator.

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
GRI 413: Local Communities 2016					
Disclosure 413-1	Operations with local community engagement, impact assessments and development programs	Engagement [p. 53-56]; Complaints and Grievances [p. 57]; Community Investment [p. 58-61]	See Eldorado's latest Responsible Gold Mining Principles Report .		Fully reported
Disclosure 413-2	Operations with significant actual and potential negative impacts on local communities				Eldorado does not report on this indicator.
GRI 414: Supplier Social Assessment 2016					
Disclosure 414-1	New suppliers that were screened using social criteria				Eldorado does not report on this indicator.
Disclosure 414-2	Negative social impacts in the supply chain and actions taken		See Eldorado's latest Responsible Gold Mining Principles Report .		Eldorado does not report on this indicator.
GRI 415: Public Policy 2016					
Disclosure 415-1	Political contributions	Engagement (Engaging With Governments) [p. 56]	See Eldorado's latest Responsible Gold Mining Principles Report .		Fully reported
GRI 416: Customer Health and Safety 2016					
Disclosure 416-1	Assessment of the health and safety impacts of product and service categories				Eldorado does not report on this indicator, as this information is not relevant or material to its products or business in gold mining.
Disclosure 416-2	Incidents of non-compliance concerning the health and safety impacts of products and services				Eldorado does not report on this indicator, as this information is not relevant or material to its products or business in gold mining.

GRI Disclosure ID	GRI Disclosure Title	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information	Completion and Omissions
GRI 417: Marketing and Labelling 2016					
Disclosure 417-1	Requirements for product and service information and labelling				Eldorado does not report on this indicator, as this information is not relevant or material to its products or business in gold mining.
Disclosure 417-2	Incidents of non-compliance concerning product and service information and labelling				Eldorado does not report on this indicator, as this information is not relevant or material to its products or business in gold mining.
Disclosure 417-3	Incidents of non-compliance concerning marketing communications				Eldorado does not report on this indicator, as this information is not relevant or material to its products or business in gold mining.
GRI 418: Customer Privacy 2016					
Disclosure 418-1	Substantiated complaints concerning breaches of customer privacy and losses of customer data				Eldorado does not report on this indicator, as this information is not relevant or material to its products or business in gold mining.

SASB Metals & Mining Sustainability Accounting Standard Index

INDUSTRY STANDARD | VERSION 2021-12

Eldorado seeks to report in alignment with the SASB Metals & Mining Sustainability Accounting Standard and this index is to be used only as a quick reference for the period January 1, 2023 to December 31, 2023.

This index does not intend to certify completeness of disclosures against the SASB Metals & Mining Sustainability Accounting Standard.

TABLE 1: SUSTAINABILITY DISCLOSURE TOPICS & ACCOUNTING METRICS

Topic	Code	Accounting Metric	Unit of Measure	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information
Greenhouse Gas Emissions	EM-MM-110a.1	Gross global Scope 1 emissions, percentage covered under emissions-limiting regulations	Metric tons (t) CO ₂ -e Percentage (%)	Energy and Climate Change (Transition Risks and Opportunities; Greenhouse Gas Emissions) [p. 70; 72]	See Eldorado's latest Climate Change & GHG Emissions Report .	
	EM-MM-110a.2	Discussion of long-term and short-term strategy or plan to manage Scope 1 emissions, emissions reduction targets, and an analysis of performance against those targets	N/A	Energy and Climate Change (Our GHG Emissions Mitigation Target; Greenhouse Gas Emissions) [p. 70; 72-74]	See Eldorado's latest Climate Change & GHG Emissions Report .	
Air Quality	EM-MM-120a.1	Air emissions of the following pollutants: (1) CO, (2) NO _x (excluding N ₂ O), (3) SO _x , (4) particulate matter (PM10), (5) mercury (Hg), (6) lead (Pb) and (7) volatile organic compounds (VOCs)	Metric tons (t)		See Eldorado's latest Responsible Gold Mining Principles Report .	None of Eldorado's operations or supply chains use mercury to extract gold.
Energy Management	EM-MM-130a.1	(1) Total energy consumed, (2) percentage grid electricity, (3) percentage renewable	Gigajoules (GJ), Percentage (%)	Energy and Climate Change (Energy) [p. 71]	See Eldorado's latest Climate Change & GHG Emissions Report .	
Water Management	EM-MM-140a.1	(1) Total fresh water withdrawn, (2) total fresh water consumed, percentage of each in regions with High or Extremely High Baseline Water Stress	Thousand cubic meters (m ³), Percentage (%)	Water and Air (Interactions with Water) [p. 83-87]		
	EM-MM-140a.2	Number of incidents of non-compliance associated with water quality permits, standards, and regulations	Number	Environmental Compliance [p. 67]		

Topic	Code	Accounting Metric	Unit of Measure	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information
Waste & Hazardous Materials Management	EM-MM-150a.4	Total weight of non-mineral waste generated	Metric tons (t)	Tailings and Waste [p. 79]		
	EM-MM-150a.5	Total weight of tailings produced	Metric tons (t)	Tailings and Waste [p. 79]		
	EM-MM-150a.6	Total weight of waste rock generated	Metric tons (t)	Tailings and Waste [p. 79]		
	EM-MM-150a.7	Total weight of hazardous waste generated	Metric tons (t)	Tailings and Waste [p. 79]		
	EM-MM-150a.8	Total weight of hazardous waste recycled	Metric tons (t)	Tailings and Waste [p. 80]		
	EM-MM-150a.9	Number of significant incidents associated with hazardous materials and waste management	Number			Eldorado recorded no significant incidents associated with hazardous materials or waste management in 2023.
	EM-MM-150a.10	Description of waste and hazardous materials management policies and procedures for active and inactive operations	N/A	Tailings and Waste [p. 75-76]	See the latest Technical Report for each of Eldorado's sites and Eldorado's Environmental Policy .	
Biodiversity Impacts	EM-MM-160a.1	Description of environmental management policies and practices for active sites	N/A	Environmental Compliance [p. 67]; Biodiversity and Reclamation [p. 89-91]	See Eldorado's Environmental Policy .	
	EM-MM-160a.2	Percentage of mine sites where acid rock drainage is: (1) predicted to occur, (2) actively mitigated and (3) under treatment or remediation	Percentage (%)	Biodiversity and Reclamation [p. 89-91]		
	EM-MM-160a.3	Percentage of (1) proved and (2) probable reserves in or near sites with protected conservation status or endangered species habitat	Percentage (%)	Biodiversity and Reclamation [p. 89]		

Topic	Code	Accounting Metric	Unit of Measure	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information
Security, Human Rights & Rights of Indigenous Peoples	EM-MM-210a.1	Percentage of (1) proved and (2) probable reserves in or near areas of conflict	Percentage (%)		See Eldorado's latest Conflict-Free Gold Report and Responsible Gold Mining Principles Report .	
	EM-MM-210a.2	Percentage of (1) proved and (2) probable reserves in or near Indigenous land	Percentage (%)	Engagement (Engagement with Indigenous Peoples) [p. 56]		
	EM-MM-210a.3	Discussion of engagement processes and due diligence practices with respect to human rights, Indigenous rights, and operation in areas of conflict	N/A	Product Responsibility [p. 43-46]; Human Rights [p. 47-48]; Engagement [p. 53-56]	See Eldorado's latest Conflict-Free Gold Report and Responsible Gold Mining Principles Report . See also Eldorado's Human Rights Policy and Social Performance Policy .	
Community Relations	EM-MM-210b.1	Discussion of process to manage risks and opportunities associated with community rights and interests	N/A	Engagement [p. 53-56]; Complaints and Grievances [p. 57]; Community Investment [p. 58-61]; Local Employment and Procurement [p. 62-65]	See Eldorado's Human Rights Policy and Social Performance Policy . See also Eldorado's latest Responsible Gold Mining Principles Report .	
	EM-MM-210b.2	Number and duration of non-technical delays	Number, Days			
Labour Relations	EM-MM-310a.1	Percentage of active workforce covered under collective bargaining agreements, broken down by U.S. and foreign employees	Percentage (%)	Labour Standards [p. 41]		
	EM-MM-310a.2	Number and duration of strikes and lockouts	Number, Days			
Workforce Health & Safety	EM-MM-320a.1	(1) MSHA all-incidence rate, (2) fatality rate, (3) near miss frequency rate (NMFR) and (4) average hours of health, safety and emergency response training for (a) full-time employees and (b) contract employees	Rate	Occupational Health and Safety (Health and Safety Management Systems) [p. 30-31]; Occupational Health and Safety (Health and Safety Training) [p. 33]		

Topic	Code	Accounting Metric	Unit of Measure	Relevant Disclosures in Eldorado's 2023 Sustainability Report	Other Supporting Disclosures and Documents	Supplementary Information
Business Ethics & Transparency	EM-MM-510a.1	Description of the management system for prevention of corruption and bribery throughout the value chain	N/A	Governance and Transparency (Eliminating Bribery and Corruption) [p. 27]		
	EM-MM-510a.2	Production in countries that have the 20 lowest rankings in Transparency International's Corruption Perception Index	Metric tons (t) saleable			None of Eldorado's sites are located in countries that have the 20 lowest rankings in Transparency International's 2023 Corruption Perception Index.
Tailings Storage Facilities Management	EM-MM-540a.1	Tailings storage facility inventory table: (1) facility name, (2) location, (3) ownership status, (4) operational status, (5) construction method, (6) maximum permitted storage capacity, (7) current amount of tailings stored, (8) consequence classification, (9) date of most recent independent technical review, (10) material findings, (11) mitigation measures, (12) site-specific EPRP	Various	Tailings and Waste (Tailings and Waste Management) [p. 76]		
	EM-MM-540a.2	Summary of tailings management systems and governance structure used to monitor and maintain the stability of tailings storage facilities	N/A	Tailings and Waste [p. 75]		
	EM-MM-540a.3	Approach to development of Emergency Preparedness and Response Plans (EPRPs) for tailings storage facilities	N/A	Occupational Health and Safety (Technology to Improve Tailings Safety, Emergency Preparedness) [p. 33-34]; Tailings and Waste [p. 75]		

TABLE 2: ACTIVITY METRICS

Activity Metric	Code	Unit of Measure	Relevant Disclosures in Eldorado’s 2023 Sustainability Report	Other Supporting Disclosures and Documents
Production of (1) metal ores and (2) finished metal products	EM-MM-000.A	Metric tons (t) saleable	About Eldorado Gold [p. 3]; Where We Operate [p. 9]	See also Eldorado's latest Management Discussion & Analysis .
Total number of employees, percentage contractors	EM-MM-000.B	Number, Percentage (%)	Local Employment and Procurement (Our Workforce) [p. 63]	

UN Guiding Principles Reporting Framework Index

Eldorado seeks to report in alignment with the UNGP Reporting Framework and this index is to be used only as a quick reference for the period January 1, 2023 to December 31, 2023.

This index does not intend to certify completeness of disclosures, nor full compliance with the minimum requirements for applying the UNGP Reporting Framework.

Section of the Framework		Relevant Documents and Disclosures
Policy Commitment	A1 – What does the company say publicly about its commitment to respect human rights?	• Code of Ethics and Business Conduct; • Human Rights Policy; • Social Performance Policy; • Respectful Workplace Policy; and • 2023 Sustainability Report [p. 27, 41, 43, 47-50]
	A1.1 – How has the public commitment been developed?	• Human Rights Policy; • Respectful Workplace Policy; • Social Performance Policy; and • 2023 Sustainability Report [p. 47-50, 56]
	A1.2 – Whose human rights does the public commitment address?	• Human Rights Policy; • Respectful Workplace Policy; • Social Performance Policy; and • 2023 Sustainability Report [p. 41, 47-50, 56]
	A1.3 – How is the public commitment disseminated?	• Human Rights Policy; • Respectful Workplace Policy; • Social Performance Policy; and • 2023 Sustainability Report [p. 26-27, 41, 47-50, 53-56, 65]

Section of the Framework		Relevant Documents and Disclosures
Embedding Respect for Human Rights	A2 – How does the company demonstrate the importance it attaches to the implementation of its human rights commitment?	• Code of Ethics and Business Conduct; • Human Rights Policy; • Respectful Workplace Policy; • Social Performance Policy; and • 2023 Sustainability Report [p. 16-17, 23, 26-27, 41, 47-50 ,65]
	A2.1 – How is day-to-day responsibility for human rights performance organized within the company, and why?	• Code of Ethics and Business Conduct; • Human Rights Policy; • Respectful Workplace Policy; • Social Performance Policy; and • 2023 Sustainability Report [p. 26-27, 47-50, 56]
	A2.2 – What kinds of human rights issues are discussed by senior management and by the Board, and why?	• 2023 Sustainability Report [p. 26-27, 47-50, 56]
	A2.3 – How are employees and contract workers made aware of the ways in which respect for human rights should inform their decisions and actions?	• Code of Ethics and Business Conduct; • Human Rights Policy; • Respectful Workplace Policy; • Social Performance Policy; and • 2023 Sustainability Report [p. 16-17, 27, 41, 47-50, 54-55, 65]
	A2.4 – How does the company make clear in its business relationships the importance it places on respect for human rights?	• Code of Ethics and Business Conduct; • Human Rights Policy; • Respectful Workplace Policy; • Social Performance Policy; and • 2023 Sustainability Report [p. 41, 47-50, 65]
	A2.5 – What lessons has the company learned during the reporting period about achieving respect for human rights, and what has changed as a result?	• 2023 Sustainability Report [p. 18, 47-50]
Statement of Salient Issues	B1 – State the salient human rights issues associated with the company’s activities and business relationships during the reporting period.	• Human Rights Policy; • Respectful Workplace Policy; and • 2023 Sustainability Report [p. 41, 47-50, 56]
Determination of Salient Issues	B2 – Describe how the salient human rights issues were determined, including any input from stakeholders.	• 2023 Sustainability Report [p. 17-18, 47-50, 53-57]; and • Social Performance Policy
Geographical Focus [if any]	B3 – If reporting on the salient human rights issues focuses on particular geographies, explain how that choice was made.	Eldorado’s approach and reporting on human rights apply to all geographies.
Additional Severe Impacts [if any]	B4 – Identify any severe impacts on human rights that occurred or were still being addressed during the reporting period, but which fall outside of the salient human rights issues, and explain how they have been addressed.	Eldorado did not identify any severe impacts on human rights during 2023.

Section of the Framework		Relevant Documents and Disclosures
Specific Policies	C1 – Does the company have any specific policies that address its salient human rights issues and, if so, what are they?	• Human Rights Policy; • Respectful Workplace Policy; and • Social Performance Policy
	C1.1 – How does the company make clear the relevance and significance of such policies to those who need to implement them?	• Human Rights Policy; • Respectful Workplace Policy; • Social Performance Policy; and • 2023 Sustainability Report [p. 27, 41, 47-50, 53-57]
Stakeholder Engagement	C2 – What is the company’s approach to engagement with stakeholders in relation to each salient human rights issue?	• 2023 Sustainability Report [p. 17-18, 41, 47-50, 53-56]; • Human Rights Policy; • Social Performance Policy; and • Respectful Workplace Policy
	C2.1 – How does the company identify which stakeholders to engage with in relation to each salient issue, and when and how to do so?	• 2023 Sustainability Report [p. 17-18, 41, 47-50, 53-56]; • Human Rights Policy; and • Social Performance Policy
	C2.2 – During the reporting period, which stakeholders has the company engaged with regarding each salient issue, and why?	• 2023 Sustainability Report [p. 18, 41, 47-50, 53-56]
	C2.3 – During the reporting period, how have the views of stakeholders influenced the company’s understanding of each salient issue and/or its approach to addressing it?	• 2023 Sustainability Report [p. 18, 41, 47-50, 53-56]
Assessing Impacts	C3 – How does the company identify any changes in the nature of each salient human rights issue over time?	• Human Rights Policy; • 2023 Sustainability Report [p. 17-18, 41, 47-50, 53-56]
	C3.1 – During the reporting period, were there any notable trends or patterns in impacts related to a salient issue and, if so, what were they?	Eldorado does not report on this indicator.
	C3.2 – During the reporting period, did any severe impacts occur that were related to a salient issue and, if so, what were they?	Eldorado did not identify severe impacts on human rights during 2023.

Section of the Framework		Relevant Documents and Disclosures
Integrating Findings and Taking Action	C4 – How does the company integrate its findings about each salient human rights issue into its decision-making processes and actions?	• Human Rights Policy; • Social Performance Policy; • Respectful Workplace Policy; and • 2023 Sustainability Report [p. 17-18, 41, 47-50, 53-56]
	C4.1 – How are those parts of the company whose decisions and actions can affect the management of salient issues, involved in finding and implementing solutions?	• Human Rights Policy; • Social Performance Policy; • Respectful Workplace Policy; and • 2023 Sustainability Report [p. 17-18, 41, 47-50, 53-56]
	C4.2 – When tensions arise between the prevention or mitigation of impacts related to a salient issue and other business objectives, how are these tensions addressed?	• Code of Ethics and Business Conduct; • Human Rights Policy; • Social Performance Policy; • Respectful Workplace Policy; and • 2023 Sustainability Report [p. 15-17, 21-23, 47-50]
	C4.3 – During the reporting period, what action has the company taken to prevent or mitigate potential impacts related to each salient issue?	• 2023 Sustainability Report [p. 18, 41, 47-50]
Tracking Performance	C5 – How does the company know if its efforts to address each salient human rights issue are effective in practice?	• 2023 Sustainability Report [p. 17-18, 41, 47-50, 53-57]
	C5.1 – What specific examples from the reporting period illustrate if each salient issue is being managed effectively?	• 2023 Sustainability Report [p. 18, 41, 47-50, 53-57]
Remediation	C6 – How does the company enable effective remedy if people are harmed by its actions or decisions in relation to the salient human rights issues?	• Human Rights Policy; • Social Performance Policy; • Respectful Workplace Policy; and • 2023 Sustainability Report [p. 27, 47-50, 53-57]
	C6.1 – Through what means can the company receive complaints or concerns related to each salient issue?	• Human Rights Policy; • Social Performance Policy; • Respectful Workplace Policy; and • 2023 Sustainability Report [p. 27, 48, 57]
	C6.2 – How does the company know if people feel able and empowered to raise complaints or concerns?	• 2023 Sustainability Report [p. 17-18, 41, 47-50, 53-57]
	C6.3 – How does the company process complaints and assess the effectiveness of outcomes?	• 2023 Sustainability Report [p. 17-18, 41, 47-50, 53-57]
	C6.4 – During the reporting period, what were the trends and patterns in complaints or concerns and their outcomes regarding each salient issue, and what lessons has the company learned?	Eldorado does not report on this indicator.
	C6.5 – During the reporting period, did the company provide or enable remedy for any actual impacts related to a salient issue and, if so, what are typical or significant examples?	Eldorado does not report on this indicator.

Cautionary Notes

CAUTIONARY NOTES REGARDING FORWARD-LOOKING INFORMATION AND RISKS

Certain of the statements made and information provided in this Report are forward-looking statements or information within the meaning of the United States Private Securities Litigation Reform Act of 1995 and applicable Canadian securities laws. Often, these forward-looking statements and forward-looking information can be identified by the use of words such as “anticipates,” “believes,” “budgets,” “continue,” “commitment”, “confident,” “estimates,” “expects,” “forecasts,” “foresee,” “future,” “goal,” “guidance,” “intends,” “opportunity,” “outlook,” “plans,” “potential,” “project,” “prospective,” “scheduled,” “strive,” or “target” or the negatives thereof or variations of such words and phrases or statements that certain actions, events or results “can,” “could,” “likely,” “may,” “might,” “will” or “would” be taken, occur or be achieved.

Forward-looking statements or information contained in this Report include, but are not limited to, statements or information with respect to: our vision and five year strategy; our overall sustainability strategy, responsible mining approach, goals, targets, initiatives and performance; plans to sell the Certej project; SIMS Compliance Verifications in Türkiye, including the timing thereof; our Climate Change Strategy, including our GHG emissions mitigation target, our intention to create a target and pathway which includes the Skouries Project, our intention to report on our quantified Scope 3 emissions in 2024 Updates and publication of our Climate Change & GHG Emissions Report; our safety performance goal of zero harm and our specific areas of focus in our health and safety management systems; expected reporting against RGMP requirements and the timing of that reporting; with respect to the Skouries Project; expected development, impact of energy efficiency designs, expected impact to the Company’s business, expected mining techniques, dry-stack tailing and concurrent reclamation, expected gold and copper production and economic and social value creation; local hiring; expected revenue to the Greek state; amounts committed to community investment programs; expected jobs to be created; further implementation of Diversity Roadmaps, our aspirational diversity targets in our Diversity Policy, diversity, training and professional development

targets and initiatives; exploration focus in Türkiye, Canada, Greece and globally; filing of Eldorado’s next ESTMA report in satisfaction of Canadian and US requirements; training goals, talent management systems and local hiring practices; planned voluntary verifications against the MAC-TSM standards in Türkiye; Eldorado’s integrated assurance program; corporate governance; bribery and corruption policies and performance; occupational health and safety; technology and innovation; labour standards and relations; ethical business practices; contractor and supplier management including supplier due diligence processes and compliance monitoring against the Supplier Code; human rights including our commitment to implement the VPSHR in our Human Rights Policy; community engagement including engagement with Indigenous peoples; investment practices and initiatives; environmental effects and impact mitigation, our implementation of an Energy and Carbon Management System; expected assurance against RGMP requirements and longer term actions related to the principles; the Lamaque Complex, including the lifetime and closing thereof; tailings and waste management; the benefits of heap leaching; the benefits of and expected future ITRB process; assessments in respect of the International Cyanide Management Code; climate-related risks, physical risks associated with our operating regions, opportunities and impacts; studies, surveys and assessments; energy use and supply; water use and supply; management of particulate matter; management and mitigation of ARD; decarbonization; reclamation; risk factors affecting our business; our expectation as to our future financial and operating performance, including future cash flow, estimated cash costs, expected metallurgical recoveries and gold price outlook; and our strategy, plans and goals, including our proposed exploration, development, construction, permitting, financing and operating potential plans and priorities and related timelines and schedules.

Forward-looking statements or information is based on a number of assumptions, that management considers reasonable, however, if such assumptions prove to be inaccurate, then actual results, activities, performance or achievements may be materially different from those described in the forward-looking statements or information. These include assumptions concerning: timing, cost and results of our construction and development activities, improvements and exploration; the future price of

gold and other commodities; exchange rates; anticipated values, costs, expenses and working capital requirements; production and metallurgical recoveries; mineral reserves and resources; our ability to unlock the potential of our brownfield property portfolio; our ability to address the negative impacts of climate change and adverse weather (including increased precipitation at Kışladağ); consistency of agglomeration and our ability to optimize it in the future; the cost of, and extent to which we use, essential consumables (including fuel, explosives, cement, and cyanide); the impact and effectiveness of productivity initiatives; the time and cost necessary for anticipated overhauls of equipment; expected by-product grades; the use, and impact or effectiveness, of growth capital; the impact of acquisitions, dispositions, suspensions or delays on our business; the sustaining capital required for various projects; and the geopolitical, economic, permitting and legal climate that we operate in (including recent disruptions to shipping operations in the Red Sea and any related shipping delays, shipping price increases, or impacts on the global energy market).

With respect to the Skouries Project, we have made additional assumptions about inflation rates; labour productivity, rates and expected hours; the scope and timing related to the awarding of key contract packages and approval thereon; expected scope of project management frameworks; our ability to continue to execute our plans relating to Skouries on the existing project timeline and consistent with the current planned project scope (including our anticipated progress regarding the integrated extractive waste management facility (“IEWMF”) and two test stopes); the timeliness of shipping for important or critical items (such as the framing for filter press plates); our ability to continue to access our project funding and remain in compliance with all covenants and contractual commitments in relation thereto; our ability to obtain and maintain all required approvals and permits, both overall and in a timely manner; no further archaeological investigations being required, the future price of gold, copper and other commodities; and the broader community engagement and social climate in respect of the Skouries Project.

In addition, except where otherwise stated, Eldorado has assumed a continuation of existing business operations on substantially the same

basis as exists at the time of this Report. Even though we believe that the assumptions and expectations represented by such statements or information are reasonable, there can be no assurance that the forward-looking statement or information will prove to be accurate. Many assumptions may be difficult to predict and are beyond our control.

Forward-looking statements or information is subject to known and unknown risks, uncertainties and other important factors that may cause actual results, activities, performance or achievements to be materially different from those described in the forward-looking statements or information. These risks, uncertainties and other factors include, among others: risks relating to our operations in foreign jurisdictions (including recent disruptions to shipping operations in the Red Sea and any related shipping delays, shipping price increases, or impacts on the global energy market); development risks at Skouries and other development projects; community relations and social license; liquidity and financing risks; climate change; inflation risk; environmental matters; production and processing; waste disposal; geotechnical and hydrogeological conditions or failures; the global economic environment; risks relating to any pandemic, epidemic, endemic or similar public health threats; reliance on a limited number of smelters and off-takers; labour (including in relation to employee/union relations, the Greek transformation, employee misconduct, key personnel, skilled workforce, expatriates, and contractors); indebtedness (including current and future operating restrictions, implications of a change of control, ability to meet debt service obligations, the implications of defaulting on obligations and change in credit ratings); government regulation; the Sarbanes-Oxley Act (“SOX”); commodity price risk; mineral tenure; permits; risks relating to environmental sustainability and governance practices and performance; financial reporting (including relating to the carrying value of our assets and changes in reporting standards); non-governmental organizations; corruption, bribery and sanctions; information and operational technology systems; litigation and contracts; estimation of mineral reserves and mineral resources; different standards used to prepare and report mineral reserves and mineral resources; credit risk; price volatility, volume fluctuations and dilution risk in respect of our shares; actions of activist shareholders; reliance on infrastructure, commodities and consumables (including power and water); currency risk; interest rate risk; tax matters;

dividends; reclamation and long-term obligations; acquisitions, including integration risks, and dispositions; regulated substances; necessary equipment; co-ownership of our properties; the unavailability of insurance; conflicts of interest; compliance with privacy legislation; reputational issues; competition, and those risk factors discussed in our Annual Information Form for the year ended December 31, 2023.

Forward-looking statements and information is designed to help you understand management’s current views of our near and longer term prospects, and it may not be appropriate for other purposes. There can be no assurance that forward-looking statements or information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, you should not place undue reliance on the forward-looking statements or information contained herein. Except as required by law, we do not expect to update forward-looking statements and information continually as conditions change.

CAUTIONARY NOTE REGARDING SCIENTIFIC AND TECHNICAL INFORMATION

There are differences between the standards and terms used for reporting mineral reserves and resources in Canada, and in the United States pursuant to the United States Securities and Exchange Commission’s (the “SEC”) Industry Guide 7. The terms mineral resource, measured mineral resource, indicated mineral resource and inferred mineral resource are defined by the Canadian Institute of Mining, Metallurgy and Petroleum (CIM) and the CIM Definition Standards on Mineral Resources and Mineral Reserves adopted by the CIM Council, and must be disclosed according to Canadian securities regulations.

These standards differ from the requirements of the SEC applicable to domestic United States reporting companies. Accordingly, information contained in this Report with respect to mineral deposits may not be comparable to similar information made public by United States companies subject to the SEC’s reporting and disclosure requirements.

Mineral resources that are not mineral reserves do not have demonstrated economic viability. Inferred mineral resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves.

Simon Hille, FAusIMM, our Executive Vice President, Technical Services & Operations, is the “Qualified Person” under National Instrument 43-101 – Standards of Disclosure for Mineral Projects (“NI 43-101”) responsible for preparing or supervising the preparation of, or approving the scientific or technical information contained in this Report for all our properties except Quebec. With respect to our properties in Quebec, Jessy Thelland, géo (OGQ No. 758) a member in good standing of the Ordre des Géologues du Québec, is the qualified person as defined in NI 43-101 responsible for, and has verified and approved, the scientific and technical disclosure contained in this AIF. Simon Hille and Jessy Thelland are employees of the Company.

For a summary of the material scientific and technical information regarding our material mineral properties described in this Report, readers should refer to the following technical reports, each of which is available under our name on SEDAR+ and EDGAR:

- Technical Report titled “Technical Report, Kışladağ Gold Mine, Turkey” with an effective date of January 17, 2020.
- Technical Report titled “Technical Report, Efemçukuru Gold Mine, Türkiye” with an effective date of December 31, 2023.
- Technical Report titled “Technical Report, Olympias Mine, Greece” with an effective date of December 31, 2023.
- Technical Report titled “Technical Report, Skouries Project, Greece” with an effective date of January 22, 2022.
- Technical Report titled “Technical Report for the Lamaque Project, Québec, Canada” with an effective date of December 31, 2021.
